LDM-639

Latest Revision: 2020-07-10

**Draft Revision NOT YET Approved** – This Rubin Observatory document has been approved as a Content-Controlled Document by the Rubin Observatory DM Change Control Board. If this document is changed or superseded, the new document will retain the Handle designation shown above. The control is on the most recent digital document with this Handle in the Rubin Observatory digital archive and not printed versions. Additional information may be found in the corresponding DM RFC. – **Draft Revision NOT YET Approved**

## Abstract

This document describes the detailed acceptance test specification for the LSST Data Management System.

Draft

## Change Record

| Version | Date       | Description   | Owner name  |
|---------|------------|---|---|
| 1.0     | 2019-02-07 | Document first approved release. Approved on RFC-495.                             | L. Guy  |
| 2.0     | 2019-07-29 | Add test cases for all Priority 1a requirements. Approved in RFC-622.             | Document: J. Carlin;<br>Approver:<br>W. O'Mullane |
| 2.1     | 2020-02-17 | Consolidated test cases for DMTR-201 test activity. Approved in RFC-669.          | J. Carlin   |
| X.X     | 2020-07-09 | Merge test specifications LDM-534, LDM-534, LDM-538, LDM-538. Update author list. | L. Guy  |

## Contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>Introduction</b>   | <b>1</b>  |
| 1.1      | Objectives . . . . .  | 1         |
| 1.2      | Scope . . . . .   | 1         |
| 1.3      | Applicable Documents . . . . .  | 2         |
| 1.4      | References . . . . .  | 2         |
| 1.5      | Acronyms . . . . .  | 3         |
| <b>2</b> | <b>Approach</b>   | <b>4</b>  |
| 2.1      | Features to be tested . . . . .   | 5         |
| 2.2      | Features not to be tested . . . . .   | 5         |
| 2.3      | Pass/fail criteria . . . . .  | 5         |
| 2.4      | Suspension criteria and resumption requirements . . . . .   | 5         |
| 2.5      | Naming convention . . . . .   | 6         |
| <b>3</b> | <b>Test Cases Summary</b>   | <b>7</b>  |
| <b>4</b> | <b>Active Test Cases</b>  | <b>17</b> |
| 4.1      | LVV-T10 - DRP-00-00: Installation of the Data Release Production v14.0 science payload . . . . .    | 17        |
| 4.2      | LVV-T11 - DRP-00-05: Execution of the DRP Science Payload by the Batch Production Service . . . . . | 19        |
| 4.3      | LVV-T12 - DRP-00-10: Data Release Includes Required Data Products . . . . .                         | 24        |
| 4.4      | LVV-T13 - DRP-00-15: Scientific Verification of Source Catalog . . . . .                            | 27        |
| 4.5      | LVV-T14 - DRP-00-25: Scientific Verification of Object Catalog . . . . .                            | 29        |
| 4.6      | LVV-T15 - DRP-00-30: Scientific Verification of Processed Visit Images . . . . .                    | 32        |
| 4.7      | LVV-T16 - DRP-00-35: Scientific Verification of Coadd Images . . . . .                              | 34        |
| 4.8      | LVV-T17 - AG-00-00: Installation of the Alert Generation v16.0 science payload. . . . .             | 37        |
| 4.9      | LVV-T18 - AG-00-05: Alert Generation Produces Required Data Products . . . . .                      | 41        |
| 4.10     | LVV-T19 - AG-00-10: Scientific Verification of Processed Visit Images . . . . .                     | 43        |
| 4.11     | LVV-T20 - AG-00-15: Scientific Verification of Difference Images . . . . .                          | 46        |

|      |  |    |
|------|--|----|
| 4.12 | LVV-T21 - AG-00-20: Scientific Verification of DIASource Catalog . . . . .                           | 48 |
| 4.13 | LVV-T22 - AG-00-25: Scientific Verification of DIAObject Catalog . . . . .                           | 51 |
| 4.14 | LVV-T23 - Verify implementation of Storing Approximations of Per-pixel Metadata                      | 53 |
| 4.15 | LVV-T24 - Verify implementation of Computing Derived Quantities . . . . .                            | 56 |
| 4.16 | LVV-T25 - Verify implementation of Denormalizing Database Tables . . . . .                           | 59 |
| 4.17 | LVV-T26 - Verify implementation of Maximum Likelihood Values and Covariances                         | 60 |
| 4.18 | LVV-T27 - Verify implementation of Data Availability . . . . .                                       | 63 |
| 4.19 | LVV-T28 - Verify implementation of Measurements in catalogs . . . . .                                | 64 |
| 4.20 | LVV-T29 - Verify implementation of Raw Science Image Data Acquisition . . . .                        | 65 |
| 4.21 | LVV-T30 - Verify implementation of Wavefront Sensor Data Acquisition . . . .                         | 67 |
| 4.22 | LVV-T31 - Verify implementation of Crosstalk Corrected Science Image Data Ac-<br>quisition . . . . . | 68 |
| 4.23 | LVV-T32 - Verify implementation of Raw Image Assembly . . . . .                                      | 69 |
| 4.24 | LVV-T33 - Verify implementation of Raw Science Image Metadata . . . . .                              | 71 |
| 4.25 | LVV-T34 - Verify implementation of Guider Calibration Data Acquisition . . . .                       | 72 |
| 4.26 | LVV-T35 - Verify implementation of Nightly Data Accessible Within 24 hrs . . .                       | 74 |
| 4.27 | LVV-T36 - Verify implementation of Difference Exposures . . . . .                                    | 77 |
| 4.28 | LVV-T37 - Verify implementation of Difference Exposure Attributes . . . . .                          | 79 |
| 4.29 | LVV-T38 - Verify implementation of Processed Visit Images . . . . .                                  | 81 |
| 4.30 | LVV-T39 - Verify implementation of Generate Photometric Zeropoint for Visit<br>Image . . . . .       | 82 |
| 4.31 | LVV-T40 - Verify implementation of Generate WCS for Visit Images . . . . .                           | 84 |
| 4.32 | LVV-T41 - Verify implementation of Generate PSF for Visit Images . . . . .                           | 86 |
| 4.33 | LVV-T42 - Verify implementation of Processed Visit Image Content . . . . .                           | 87 |
| 4.34 | LVV-T43 - Verify implementation of Background Model Calculation . . . . .                            | 89 |
| 4.35 | LVV-T44 - Verify implementation of Documenting Image Characterization . . .                          | 91 |
| 4.36 | LVV-T45 - Verify implementation of Prompt Processing Data Quality Report Def-<br>inition . . . . .   | 92 |
| 4.37 | LVV-T46 - Verify implementation of Prompt Processing Performance Report<br>Definition . . . . .      | 94 |

|      |   |     |
|------|---|-----|
| 4.38 | LVV-T47 - Verify implementation of Prompt Processing Calibration Report Definition . . . . .              | 95  |
| 4.39 | LVV-T48 - Verify implementation of Exposure Catalog . . . . .   | 97  |
| 4.40 | LVV-T49 - Verify implementation of DIASource Catalog . . . . .  | 98  |
| 4.41 | LVV-T50 - Verify implementation of Faint DIASource Measurements . . . . .                                 | 100 |
| 4.42 | LVV-T51 - Verify implementation of DIAObject Catalog . . . . .  | 103 |
| 4.43 | LVV-T52 - Verify implementation of DIAObject Attributes . . . . .   | 104 |
| 4.44 | LVV-T53 - Verify implementation of SSOBJECT Catalog . . . . .   | 106 |
| 4.45 | LVV-T54 - Verify implementation of Alert Content . . . . .  | 108 |
| 4.46 | LVV-T55 - Verify implementation of DIAForcedSource Catalog . . . . .                                      | 109 |
| 4.47 | LVV-T56 - Verify implementation of Characterizing Variability . . . . .                                   | 111 |
| 4.48 | LVV-T57 - Verify implementation of Calculating SSOBJECT Parameters . . . . .                              | 112 |
| 4.49 | LVV-T58 - Verify implementation of Matching DIASources to Objects . . . . .                               | 114 |
| 4.50 | LVV-T59 - Verify implementation of Regenerating L1 Data Products During Data Release Processing . . . . . | 116 |
| 4.51 | LVV-T60 - Verify implementation of Publishing predicted visit schedule . . . . .                          | 117 |
| 4.52 | LVV-T61 - Verify implementation of Associate Sources to Objects . . . . .                                 | 118 |
| 4.53 | LVV-T62 - Verify implementation of Provide PSF for Coadded Images . . . . .                               | 120 |
| 4.54 | LVV-T63 - Verify implementation of Produce Images for EPO . . . . .                                       | 121 |
| 4.55 | LVV-T64 - Verify implementation of Coadded Image Provenance . . . . .                                     | 124 |
| 4.56 | LVV-T65 - Verify implementation of Source Catalog . . . . .   | 126 |
| 4.57 | LVV-T66 - Verify implementation of Forced-Source Catalog . . . . .  | 127 |
| 4.58 | LVV-T67 - Verify implementation of Object Catalog . . . . .   | 129 |
| 4.59 | LVV-T68 - Verify implementation of Provide Photometric Redshifts of Galaxies . . . . .                    | 132 |
| 4.60 | LVV-T69 - Verify implementation of Object Characterization . . . . .                                      | 133 |
| 4.61 | LVV-T71 - Verify implementation of Detecting extended low surface brightness objects . . . . .            | 135 |
| 4.62 | LVV-T72 - Verify implementation of Coadd Image Method Constraints . . . . .                               | 136 |
| 4.63 | LVV-T73 - Verify implementation of Deep Detection Coadds . . . . .  | 138 |
| 4.64 | LVV-T74 - Verify implementation of Template Coadds . . . . .  | 139 |

|      |  |     |
|------|--|-----|
| 4.65 | LWV-T75 - Verify implementation of Multi-band Coadds . . . . .   | 141 |
| 4.66 | LWV-T76 - Verify implementation of All-Sky Visualization of Data Releases . . .                            | 142 |
| 4.67 | LWV-T77 - Verify implementation of Best Seeing Coadds . . . . .  | 144 |
| 4.68 | LWV-T78 - Verify implementation of Persisting Data Products . . . . .                                      | 146 |
| 4.69 | LWV-T79 - Verify implementation of PSF-Matched Coadds . . . . .  | 147 |
| 4.70 | LWV-T80 - Verify implementation of Detecting faint variable objects . . . . .                              | 148 |
| 4.71 | LWV-T81 - Verify implementation of Targeted Coadds . . . . .   | 151 |
| 4.72 | LWV-T82 - Verify implementation of Tracking Characterization Changes Between<br>Data Releases . . . . .    | 152 |
| 4.73 | LWV-T83 - Verify implementation of Bad Pixel Map . . . . .   | 154 |
| 4.74 | LWV-T84 - Verify implementation of Bias Residual Image . . . . .   | 155 |
| 4.75 | LWV-T85 - Verify implementation of Crosstalk Correction Matrix . . . . .                                   | 158 |
| 4.76 | LWV-T86 - Verify implementation of Illumination Correction Frame . . . . .                                 | 159 |
| 4.77 | LWV-T87 - Verify implementation of Monochromatic Flatfield Data Cube . . . .                               | 161 |
| 4.78 | LWV-T88 - Verify implementation of Calibration Data Products . . . . .                                     | 162 |
| 4.79 | LWV-T89 - Verify implementation of Calibration Image Provenance . . . . .                                  | 164 |
| 4.80 | LWV-T90 - Verify implementation of Dark Current Correction Frame . . . . .                                 | 165 |
| 4.81 | LWV-T91 - Verify implementation of Fringe Correction Frame . . . . .                                       | 167 |
| 4.82 | LWV-T92 - Verify implementation of Processing of Data From Special Programs                                | 168 |
| 4.83 | LWV-T93 - Verify implementation of Level 1 Processing of Special Programs Data                             | 170 |
| 4.84 | LWV-T94 - Verify implementation of Special Programs Database . . . . .                                     | 171 |
| 4.85 | LWV-T95 - Verify implementation of Constraints on Level 1 Special Program<br>Products Generation . . . . . | 173 |
| 4.86 | LWV-T96 - Verify implementation of Query Repeatability . . . . .   | 174 |
| 4.87 | LWV-T97 - Verify implementation of Uniqueness of IDs Across Data Releases .                                | 176 |
| 4.88 | LWV-T98 - Verify implementation of Selection of Datasets . . . . .   | 177 |
| 4.89 | LWV-T99 - Verify implementation of Processing of Datasets . . . . .  | 179 |
| 4.90 | LWV-T100 - Verify implementation of Transparent Data Access . . . . .                                      | 181 |
| 4.91 | LWV-T101 - Verify implementation of Transient Alert Distribution . . . . .                                 | 182 |

|       |   |     |
|-------|---|-----|
| 4.92  | LVV-T102 - Verify implementation of Solar System Objects Available Within Specified Time . . . . .      | 183 |
| 4.93  | LVV-T103 - Verify implementation of Generate Data Quality Report Within Specified Time . . . . .        | 185 |
| 4.94  | LVV-T104 - Verify implementation of Generate DMS Performance Report Within Specified Time . . . . .     | 186 |
| 4.95  | LVV-T105 - Verify implementation of Generate Calibration Report Within Specified Time . . . . .         | 187 |
| 4.96  | LVV-T106 - Verify implementation of Calibration Images Available Within Specified Time . . . . .        | 188 |
| 4.97  | LVV-T107 - Verify implementation of Level-1 Production Completeness . . . . .                           | 190 |
| 4.98  | LVV-T108 - Verify implementation of Level 1 Source Association . . . . .                                | 191 |
| 4.99  | LVV-T109 - Verify implementation of SSObject Precoverly . . . . .                                       | 192 |
| 4.100 | LVV-T110 - Verify implementation of DIASource Precoverly . . . . .                                      | 193 |
| 4.101 | LVV-T111 - Verify implementation of Use of External Orbit Catalogs . . . . .                            | 195 |
| 4.102 | LVV-T112 - Verify implementation of Alert Filtering Service . . . . .                                   | 196 |
| 4.103 | LVV-T113 - Verify implementation of Performance Requirements for LSST Alert Filtering Service . . . . . | 197 |
| 4.104 | LVV-T114 - Verify implementation of Pre-defined alert filters . . . . .                                 | 199 |
| 4.105 | LVV-T115 - Verify implementation of Calibration Production Processing . . . . .                         | 200 |
| 4.106 | LVV-T116 - Verify implementation of Associating Objects across data releases . . . . .                  | 202 |
| 4.107 | LVV-T117 - Verify implementation of DAC resource allocation for Level 3 processing . . . . .            | 203 |
| 4.108 | LVV-T118 - Verify implementation of Level 3 Data Product Self Consistency . . . . .                     | 205 |
| 4.109 | LVV-T119 - Verify implementation of Provenance for Level 3 processing at DACs . . . . .                 | 206 |
| 4.110 | LVV-T120 - Verify implementation of Software framework for Level 3 catalog processing . . . . .         | 207 |
| 4.111 | LVV-T121 - Verify implementation of Software framework for Level 3 image processing . . . . .           | 208 |
| 4.112 | LVV-T122 - Verify implementation of Level 3 Data Import . . . . .                                       | 209 |

|       |  |     |
|-------|--|-----|
| 4.113 | LVV-T123 - Verify implementation of Access Controls of Level 3 Data Products                         | 211 |
| 4.114 | LVV-T124 - Verify implementation of Software Architecture to Enable Community Re-Use . . . . .       | 212 |
| 4.115 | LVV-T125 - Verify implementation of Simulated Data . . . . .   | 215 |
| 4.116 | LVV-T126 - Verify implementation of Image Differencing . . . . .                                     | 216 |
| 4.117 | LVV-T127 - Verify implementation of Provide Source Detection Software . . . .                        | 217 |
| 4.118 | LVV-T128 - Verify implementation Provide Astrometric Model . . . . .                                 | 218 |
| 4.119 | LVV-T129 - Verify implementation of Provide Calibrated Photometry . . . . .                          | 219 |
| 4.120 | LVV-T130 - Verify implementation of Enable a Range of Shape Measurement Approaches . . . . .         | 221 |
| 4.121 | LVV-T131 - Verify implementation of Provide User Interface Services . . . . .                        | 222 |
| 4.122 | LVV-T132 - Verify implementation of Pre-cursor and Real Data . . . . .                               | 228 |

# LSST Data Management Acceptance Test Specification

## 1 Introduction

This document specifies the acceptance test procedures for the LSST Data Management System. It is a living document that is updated as new functionality is delivered and acceptance testing proceeds. A full description of the LSST Data Management System is provided in the Data Management System Design document, LDM-148 with the science requirements detailed in the LSST Science Requirements Document LPM-17.

### 1.1 Objectives

This document builds on the description of LSST Data Management's approach to testing as described in LDM-503 to describe the detailed test cases that will be performed to verify the Data Management System.

It provides test designs, test cases and procedures for the tests, and the corresponding pass/fail criteria for each test.

### 1.2 Scope

This document provides the acceptance test plan for the Data Management System (DMS), as described by the Data Management System Requirements in LSE-61.

### 1.3 Applicable Documents

| W    | Watt; SI unit of power   |
| p    | pico; SI units prefix for 1E-12                                  |

## 2 Approach

This document describes the acceptance tests for the Data Management System, with a focus on whether the data products, functionality and services satisfy the requirements described in LSE-61.

The requirements from LSE-61 are extracted into the Jira "LSST Verification and Validation" Project, managed through the Jira Test Management Plugin system. Each LSE-61 requirement leads to a "LSST Verification and Validation" (LVV) Element. Each LVV Element comprises one or more more Test Cases. Each Test Case describes a Test Script to be executed, the coverage, pre-conditions, configuration, test results, and other details as specified by LDM-503. Test Scripts may have common set up and analysis steps. The Jira system allows for these steps to be shared by other Test Scripts. This improves clarity and consistency across all Test Cases.

In this document, each Test Case is listed here with the LVV Element it tests, a summary of the Test Items exercised by the Test Case, and the detailed steps to be executed by the Test Case. Shared steps between Test Scripts have been explicitly written out to appear fully in each Test Case.

## 2.1 Features to be tested

All top-level requirements for the LSST Data Management System described in LSE-61 are to be tested, including

- Rubin Data Products, including their production, scientific fidelity and persistence,
- Alert, Calibration and Data Release Production pipelines and the execution of payloads,
- Middleware,
- Qserv, the LSST parallel distributed database,
- Services provided by the Rubin Data Facility,
- Rubin facilities including the data archive, base, summit, and the communications between them to accept science and engineering data.

## 2.2 Features not to be tested

This document does not describe facilities for periodically generating or collecting key performance metrics (KPMs), except insofar as those KPMs are incidentally measured as part of executing the documented test cases.

## 2.3 Pass/fail criteria

The results of all tests will be assessed using the criteria described in LDM-503 §4.

Note that when executing pipelines, tasks, or individual algorithms, any unexplained or unexpected errors or warnings appearing in the associated log or on screen output must be described in the documentation for the system under test. Any warning or error for which this is not the case must be filed as a software problem report and filed with the DMCCB.

## 2.4 Suspension criteria and resumption requirements

Refer to individual test cases where applicable.

## 2.5 Naming convention

**LVV** : Is the label for the “LSST Verification and Validation” project in Jira.

**LVV-XXX** : Are Verification Elements, where XXX is the Verification Element identifier. Each Verification Element has at least one Test Case.

**LVV-TYYY** : Are Test Cases. Each Test Case is associated with a Verification Element, where YYY is the Test Case identifier.

The Verification Elements are drawn from LSE-61 requirements which have names of the form DMS-REQ-ZZZZ.

### 3 Test Cases Summary

| Test Id | Test Name   |
|---------|---|
| LVV-T10 | DRP-00-00: Installation of the Data Release Production v14.0 science payload    |
| LVV-T11 | DRP-00-05: Execution of the DRP Science Payload by the Batch Production Service |
| LVV-T12 | DRP-00-10: Data Release Includes Required Data Products                         |
| LVV-T13 | DRP-00-15: Scientific Verification of Source Catalog                            |
| LVV-T14 | DRP-00-25: Scientific Verification of Object Catalog                            |
| LVV-T15 | DRP-00-30: Scientific Verification of Processed Visit Images                    |
| LVV-T16 | DRP-00-35: Scientific Verification of Coadd Images                              |
| LVV-T17 | AG-00-00: Installation of the Alert Generation v16.0 science payload.           |
| LVV-T18 | AG-00-05: Alert Generation Produces Required Data Products                      |
| LVV-T19 | AG-00-10: Scientific Verification of Processed Visit Images                     |
| LVV-T20 | AG-00-15: Scientific Verification of Difference Images                          |
| LVV-T21 | AG-00-20: Scientific Verification of DIASource Catalog                          |
| LVV-T22 | AG-00-25: Scientific Verification of DIAObject Catalog                          |
| LVV-T23 | Verify implementation of Storing Approximations of Per-pixel Metadata           |
| LVV-T24 | Verify implementation of Computing Derived Quantities                           |
| LVV-T25 | Verify implementation of Denormalizing Database Tables                          |
| LVV-T26 | Verify implementation of Maximum Likelihood Values and Covariances              |
| LVV-T27 | Verify implementation of Data Availability                                      |
| LVV-T28 | Verify implementation of Measurements in catalogs                               |
| LVV-T29 | Verify implementation of Raw Science Image Data Acquisition                     |
| LVV-T30 | Verify implementation of Wavefront Sensor Data Acquisition                      |
| LVV-T31 | Verify implementation of Crosstalk Corrected Science Image Data Acquisition     |
| LVV-T32 | Verify implementation of Raw Image Assembly                                     |
| LVV-T33 | Verify implementation of Raw Science Image Metadata                             |
| LVV-T34 | Verify implementation of Guider Calibration Data Acquisition                    |
| LVV-T35 | Verify implementation of Nightly Data Accessible Within 24 hrs                  |
| LVV-T36 | Verify implementation of Difference Exposures                                   |
| LVV-T37 | Verify implementation of Difference Exposure Attributes                         |
| LVV-T38 | Verify implementation of Processed Visit Images                                 |
| LVV-T39 | Verify implementation of Generate Photometric Zeropoint for Visit Image         |

| Test Id | Test Name   |
|---------|---|
| LVV-T40 | Verify implementation of Generate WCS for Visit Images                                |
| LVV-T41 | Verify implementation of Generate PSF for Visit Images                                |
| LVV-T42 | Verify implementation of Processed Visit Image Content                                |
| LVV-T43 | Verify implementation of Background Model Calculation                                 |
| LVV-T44 | Verify implementation of Documenting Image Characterization                           |
| LVV-T45 | Verify implementation of Prompt Processing Data Quality Report Definition             |
| LVV-T46 | Verify implementation of Prompt Processing Performance Report Definition              |
| LVV-T47 | Verify implementation of Prompt Processing Calibration Report Definition              |
| LVV-T48 | Verify implementation of Exposure Catalog   |
| LVV-T49 | Verify implementation of DIASource Catalog  |
| LVV-T50 | Verify implementation of Faint DIASource Measurements                                 |
| LVV-T51 | Verify implementation of DIAObject Catalog  |
| LVV-T52 | Verify implementation of DIAObject Attributes   |
| LVV-T53 | Verify implementation of SSObject Catalog   |
| LVV-T54 | Verify implementation of Alert Content  |
| LVV-T55 | Verify implementation of DIAForcedSource Catalog                                      |
| LVV-T56 | Verify implementation of Characterizing Variability                                   |
| LVV-T57 | Verify implementation of Calculating SSObject Parameters                              |
| LVV-T58 | Verify implementation of Matching DIASources to Objects                               |
| LVV-T59 | Verify implementation of Regenerating L1 Data Products During Data Release Processing |
| LVV-T60 | Verify implementation of Publishing predicted visit schedule                          |
| LVV-T61 | Verify implementation of Associate Sources to Objects                                 |
| LVV-T62 | Verify implementation of Provide PSF for Coadded Images                               |
| LVV-T63 | Verify implementation of Produce Images for EPO                                       |
| LVV-T64 | Verify implementation of Coadded Image Provenance                                     |
| LVV-T65 | Verify implementation of Source Catalog   |
| LVV-T66 | Verify implementation of Forced-Source Catalog  |
| LVV-T67 | Verify implementation of Object Catalog   |
| LVV-T68 | Verify implementation of Provide Photometric Redshifts of Galaxies                    |

| Test Id  | Test Name   |
|----------|---|
| LVV-T69  | Verify implementation of Object Characterization                                    |
| LVV-T71  | Verify implementation of Detecting extended low surface brightness objects          |
| LVV-T72  | Verify implementation of Coadd Image Method Constraints                             |
| LVV-T73  | Verify implementation of Deep Detection Coadds                                      |
| LVV-T74  | Verify implementation of Template Coadds  |
| LVV-T75  | Verify implementation of Multi-band Coadds  |
| LVV-T76  | Verify implementation of All-Sky Visualization of Data Releases                     |
| LVV-T77  | Verify implementation of Best Seeing Coadds   |
| LVV-T78  | Verify implementation of Persisting Data Products                                   |
| LVV-T79  | Verify implementation of PSF-Matched Coadds   |
| LVV-T80  | Verify implementation of Detecting faint variable objects                           |
| LVV-T81  | Verify implementation of Targeted Coadds  |
| LVV-T82  | Verify implementation of Tracking Characterization Changes Between Data Releases    |
| LVV-T83  | Verify implementation of Bad Pixel Map  |
| LVV-T84  | Verify implementation of Bias Residual Image  |
| LVV-T85  | Verify implementation of Crosstalk Correction Matrix                                |
| LVV-T86  | Verify implementation of Illumination Correction Frame                              |
| LVV-T87  | Verify implementation of Monochromatic Flatfield Data Cube                          |
| LVV-T88  | Verify implementation of Calibration Data Products                                  |
| LVV-T89  | Verify implementation of Calibration Image Provenance                               |
| LVV-T90  | Verify implementation of Dark Current Correction Frame                              |
| LVV-T91  | Verify implementation of Fringe Correction Frame                                    |
| LVV-T92  | Verify implementation of Processing of Data From Special Programs                   |
| LVV-T93  | Verify implementation of Level 1 Processing of Special Programs Data                |
| LVV-T94  | Verify implementation of Special Programs Database                                  |
| LVV-T95  | Verify implementation of Constraints on Level 1 Special Program Products Generation |
| LVV-T96  | Verify implementation of Query Repeatability  |
| LVV-T97  | Verify implementation of Uniqueness of IDs Across Data Releases                     |
| LVV-T98  | Verify implementation of Selection of Datasets                                      |
| LVV-T99  | Verify implementation of Processing of Datasets                                     |
| LVV-T100 | Verify implementation of Transparent Data Access                                    |

| Test Id  | Test Name  |
|----------|--|
| LVV-T101 | Verify implementation of Transient Alert Distribution                              |
| LVV-T102 | Verify implementation of Solar System Objects Available Within Specified Time      |
| LVV-T103 | Verify implementation of Generate Data Quality Report Within Specified Time        |
| LVV-T104 | Verify implementation of Generate DMS Performance Report Within Specified Time     |
| LVV-T105 | Verify implementation of Generate Calibration Report Within Specified Time         |
| LVV-T106 | Verify implementation of Calibration Images Available Within Specified Time        |
| LVV-T107 | Verify implementation of Level-1 Production Completeness                           |
| LVV-T108 | Verify implementation of Level 1 Source Association                                |
| LVV-T109 | Verify implementation of SSObject Precovery  |
| LVV-T110 | Verify implementation of DIASource Precovery                                       |
| LVV-T111 | Verify implementation of Use of External Orbit Catalogs                            |
| LVV-T112 | Verify implementation of Alert Filtering Service                                   |
| LVV-T113 | Verify implementation of Performance Requirements for LSST Alert Filtering Service |
| LVV-T114 | Verify implementation of Pre-defined alert filters                                 |
| LVV-T115 | Verify implementation of Calibration Production Processing                         |
| LVV-T116 | Verify implementation of Associating Objects across data releases                  |
| LVV-T117 | Verify implementation of DAC resource allocation for Level 3 processing            |
| LVV-T118 | Verify implementation of Level 3 Data Product Self Consistency                     |
| LVV-T119 | Verify implementation of Provenance for Level 3 processing at DACs                 |
| LVV-T120 | Verify implementation of Software framework for Level 3 catalog processing         |
| LVV-T121 | Verify implementation of Software framework for Level 3 image processing           |
| LVV-T122 | Verify implementation of Level 3 Data Import                                       |
| LVV-T123 | Verify implementation of Access Controls of Level 3 Data Products                  |
| LVV-T124 | Verify implementation of Software Architecture to Enable Community Re-Use          |
| LVV-T125 | Verify implementation of Simulated Data  |

| Test Id  | Test Name   |
|----------|---|
| LVV-T126 | Verify implementation of Image Differencing                                     |
| LVV-T127 | Verify implementation of Provide Source Detection Software                      |
| LVV-T128 | Verify implementation Provide Astrometric Model                                 |
| LVV-T129 | Verify implementation of Provide Calibrated Photometry                          |
| LVV-T130 | Verify implementation of Enable a Range of Shape Measurement Approaches         |
| LVV-T131 | Verify implementation of Provide User Interface Services                        |
| LVV-T132 | Verify implementation of Pre-cursor and Real Data                               |
| LVV-T133 | Verify implementation of Provide Beam Projector Coordinate Calculation Software |
| LVV-T134 | Verify implementation of Provide Image Access Services                          |
| LVV-T136 | Verify implementation of Data Product and Raw Data Access                       |
| LVV-T137 | Verify implementation of Data Product Ingest                                    |
| LVV-T138 | Verify implementation of Bulk Download Service                                  |
| LVV-T140 | Verify implementation of Production Orchestration                               |
| LVV-T141 | Verify implementation of Production Monitoring                                  |
| LVV-T142 | Verify implementation of Production Fault Tolerance                             |
| LVV-T144 | Verify implementation of Task Specification                                     |
| LVV-T145 | Verify implementation of Task Configuration                                     |
| LVV-T146 | Verify implementation of DMS Initialization Component                           |
| LVV-T147 | Verify implementation of Control of Level-1 Production                          |
| LVV-T148 | Verify implementation of Unique Processing Coverage                             |
| LVV-T149 | Verify implementation of Catalog Queries  |
| LVV-T150 | Verify implementation of Maintain Archive Publicly Accessible                   |
| LVV-T151 | Verify Implementation of Catalog Export Formats From the Notebook Aspect        |
| LVV-T152 | Verify implementation of Keep Historical Alert Archive                          |
| LVV-T153 | Verify implementation of Provide Engineering and Facility Database Archive      |
| LVV-T154 | Verify implementation of Raw Data Archiving Reliability                         |
| LVV-T155 | Verify implementation of Un-Archived Data Product Cache                         |
| LVV-T156 | Verify implementation of Regenerate Un-archived Data Products                   |
| LVV-T157 | Verify implementation Level 1 Data Product Access                               |
| LVV-T158 | Verify implementation Level 1 and 2 Catalog Access                              |

| Test Id  | Test Name   |
|----------|---|
| LVV-T159 | Verify implementation of Regenerating Data Products from Previous Data Releases |
| LVV-T160 | Verify implementation of Providing a Precovery Service                          |
| LVV-T161 | Verify implementation of Logging of catalog queries                             |
| LVV-T162 | Verify implementation of Access to Previous Data Releases                       |
| LVV-T163 | Verify implementation of Data Access Services                                   |
| LVV-T164 | Verify implementation of Operations Subsets                                     |
| LVV-T165 | Verify implementation of Subsets Support  |
| LVV-T166 | Verify implementation of Access Services Performance                            |
| LVV-T167 | Verify Capability to serve older Data Releases at Full Performance              |
| LVV-T168 | Verify design of Data Access Services allows Evolution of the LSST Data Model   |
| LVV-T169 | Verify implementation of Older Release Behavior                                 |
| LVV-T170 | Verify implementation of Query Availability                                     |
| LVV-T171 | Verify implementation of Pipeline Availability                                  |
| LVV-T172 | Verify implementation of Optimization of Cost, Reliability and Availability     |
| LVV-T173 | Verify implementation of Pipeline Throughput                                    |
| LVV-T174 | Verify implementation of Re-processing Capacity                                 |
| LVV-T175 | Verify implementation of Temporary Storage for Communications Links             |
| LVV-T176 | Verify implementation of Infrastructure Sizing for “catching up”                |
| LVV-T177 | Verify implementation of Incorporate Fault-Tolerance                            |
| LVV-T178 | Verify implementation of Incorporate Autonomics                                 |
| LVV-T179 | Verify implementation of Compute Platform Heterogeneity                         |
| LVV-T180 | Verify implementation of Data Management Unscheduled Downtime                   |
| LVV-T181 | Verify Base Voice Over IP (VOIP)  |
| LVV-T182 | Verify implementation of Prefer Computing and Storage Down                      |
| LVV-T183 | Verify implementation of DMS Communication with OCS                             |
| LVV-T185 | Verify implementation of Summit to Base Network Availability                    |
| LVV-T186 | Verify implementation of Summit to Base Network Reliability                     |
| LVV-T187 | Verify implementation of Summit to Base Network Secondary Link                  |
| LVV-T188 | Verify implementation of Summit to Base Network Ownership and Operation         |
| LVV-T189 | Verify implementation of Base Facility Infrastructure                           |
| LVV-T190 | Verify implementation of Base Facility Co-Location with Existing Facility       |

| Test Id  | Test Name   |
|----------|---|
| LVV-T191 | Verify implementation of Commissioning Cluster  |
| LVV-T192 | Verify implementation of Base Wireless LAN (WiFi)                                     |
| LVV-T193 | Verify implementation of Base to Archive Network                                      |
| LVV-T194 | Verify implementation of Base to Archive Network Availability                         |
| LVV-T195 | Verify implementation of Base to Archive Network Reliability                          |
| LVV-T196 | Verify implementation of Base to Archive Network Secondary Link                       |
| LVV-T197 | Verify implementation of Archive Center   |
| LVV-T198 | Verify implementation of Archive Center Disaster Recovery                             |
| LVV-T199 | Verify implementation of Archive Center Co-Location with Existing Facility            |
| LVV-T200 | Verify implementation of Archive to Data Access Center Network                        |
| LVV-T201 | Verify implementation of Archive to Data Access Center Network Availability           |
| LVV-T202 | Verify implementation of Archive to Data Access Center Network Reliability            |
| LVV-T203 | Verify implementation of Archive to Data Access Center Network Secondary Link         |
| LVV-T204 | Verify implementation of Access to catalogs for external Level 3 processing           |
| LVV-T205 | Verify implementation of Access to input catalogs for DAC-based Level 3 processing    |
| LVV-T206 | Verify implementation of Federation with external catalogs                            |
| LVV-T207 | Verify implementation of Access to images for external Level 3 processing             |
| LVV-T208 | Verify implementation of Access to input images for DAC-based Level 3 processing      |
| LVV-T209 | Verify implementation of Data Access Centers  |
| LVV-T210 | Verify implementation of Data Access Center Simultaneous Connections                  |
| LVV-T211 | Verify implementation of Data Access Center Geographical Distribution                 |
| LVV-T212 | Verify implementation of No Limit on Data Access Centers                              |
| LVV-T216 | Installation of the Alert Distribution payloads.                                      |
| LVV-T217 | Full Stream Alert Distribution  |
| LVV-T218 | Simple Filtering of the LSST Alert Stream   |
| LVV-T283 | RAS-00-00: Writing well-formed raw image  |
| LVV-T284 | RAS-00-05: (LDM-503-8b) Writing data from CCOB to the DBB for further data processing |

| Test Id   | Test Name   |
|-----------|---|
| LVV-T285  | RAS-00-10: Raw images in Observatory Operations Data Service                                  |
| LVV-T286  | RAS-00-20: Raw image are part of the permanent record of survey via DBB                       |
| LVV-T287  | RAS-00-30: Raw Image Archiving Availability, Throughput, Reliability, and Heterogeneity       |
| LVV-T362  | Installation of the LSST Science Pipelines Payloads   |
| LVV-T363  | Science Pipelines Release Documentation   |
| LVV-T368  | Loading and processing Camera test data   |
| LVV-T374  | Ingesting Camera test data  |
| LVV-T376  | Verify the Calculation of Ellipticity Residuals and Correlations                              |
| LVV-T377  | Verify Calculation of Photometric Performance Metrics   |
| LVV-T378  | Verify Calculation of Astrometric Performance Metrics   |
| LVV-T385  | Verify implementation of minimum number of simultaneous retrievals of CCD-sized coadd cutouts |
| LVV-T454  | LDM-503-8 Enable LSP viewing of spectrograph data.  |
| LVV-T1085 | Short Queries Functional Test   |
| LVV-T1086 | Full Table Scans Functional Test  |
| LVV-T1087 | Full Table Joins Functional Test  |
| LVV-T1088 | Concurrent Scans Scaling Test   |
| LVV-T1089 | Load Test   |
| LVV-T1090 | Heavy Load Test   |
| LVV-T1097 | Verify Summit Facility Network Implementation   |
| LVV-T1168 | Verify Summit - Base Network Integration  |
| LVV-T1232 | Verify Implementation of Catalog Export Formats From the Portal Aspect                        |
| LVV-T1240 | Verify implementation of minimum astrometric standards per CCD                                |
| LVV-T1250 | Verify implementation of minimum number of simultaneous DM EFD query users                    |
| LVV-T1251 | Verify implementation of maximum time to retrieve DM EFD query results                        |
| LVV-T1252 | Verify number of simultaneous alert filter users  |
| LVV-T1264 | Verify implementation of archiving camera test data   |
| LVV-T1276 | Verify implementation of latency of reporting optical transients                              |
| LVV-T1277 | Verify processing of maximum number of calibration exposures                                  |
| LVV-T1332 | Verify implementation of maximum time for retrieval of CCD-sized coadd cutouts                |
| LVV-T1524 | Verify Implementation of Exporting MOCs as FITS   |

| Test Id   | Test Name  |
|-----------|--|
| LVV-T1525 | Verify Implementation of Linkage Between HiPS Maps and Coadded Images  |
| LVV-T1526 | Verify Availability of Secure and Authenticated HiPS Service   |
| LVV-T1527 | Verify Support for HiPS Visualization  |
| LVV-T1528 | Verify Visualization of MOCs via Science Platform  |
| LVV-T1529 | Verify Production of All-Sky HiPS Map  |
| LVV-T1530 | Verify Production of Multi-Order Coverage Maps for Survey Data   |
| LVV-T1549 | LDM-503-6 Comcam verification readiness  |
| LVV-T1550 | LDM-503-10 DAQ Validation  |
| LVV-T1556 | LDM-503-10B Large Scale CCOB Data Access   |
| LVV-T1560 | Verify archiving of processing provenance  |
| LVV-T1561 | Verify provenance availability to science users  |
| LVV-T1562 | Verify availability of re-run tools  |
| LVV-T1563 | Verify re-run on different system produces the same results  |
| LVV-T1564 | Verify re-run on similar system produces the same results  |
| LVV-T1612 | Verify Summit - Base Network Integration (System Level)  |
| LVV-T1745 | Verify calculation of median relative astrometric measurement error on 20 arcminute scales                               |
| LVV-T1746 | Verify calculation of fraction of relative astrometric measurement error on 5 arcminute scales exceeding outlier limit   |
| LVV-T1747 | Verify calculation of relative astrometric measurement error on 5 arcminute scales                                       |
| LVV-T1748 | Verify calculation of median error in absolute position for RA, Dec axes   |
| LVV-T1749 | Verify calculation of fraction of relative astrometric measurement error on 20 arcminute scales exceeding outlier limit  |
| LVV-T1750 | Verify calculation of separations relative to r-band exceeding color difference outlier limit                            |
| LVV-T1751 | Verify calculation of median relative astrometric measurement error on 200 arcminute scales                              |
| LVV-T1752 | Verify calculation of fraction of relative astrometric measurement error on 200 arcminute scales exceeding outlier limit |
| LVV-T1753 | Verify calculation of RMS difference of separations relative to r-band   |
| LVV-T1754 | Verify calculation of residual PSF ellipticity correlations for separations less than 5 arcmin                           |

| Test Id   | Test Name  |
|-----------|--|
| LVV-T1755 | Verify calculation of residual PSF ellipticity correlations for separations less than 1 arcmin |
| LVV-T1756 | Verify calculation of photometric repeatability in uzy filters                                 |
| LVV-T1757 | Verify calculation of photometric repeatability in gri filters                                 |
| LVV-T1758 | Verify calculation of photometric outliers in uzy bands  |
| LVV-T1759 | Verify calculation of photometric outliers in gri bands  |
| LVV-T1830 | Verify Implementation of Scientific Visualization of Camera Image Data                         |
| LVV-T1831 | Verify Implementation of Data Management Nightly Reporting                                     |
| LVV-T1836 | Verify calculation of resolved-to-unresolved flux ratio errors                                 |
| LVV-T1837 | Verify calculation of band-to-band color zero-point accuracy                                   |
| LVV-T1838 | Verify calculation of image fraction affected by ghosts  |
| LVV-T1839 | Verify calculation of RMS width of photometric zeropoint                                       |
| LVV-T1840 | Verify calculation of sky brightness precision   |
| LVV-T1841 | Verify calculation of scientifically unusable pixel fraction                                   |
| LVV-T1842 | Verify calculation of zeropoint error fraction exceeding the outlier limit                     |
| LVV-T1843 | Verify calculation of significance of imperfect crosstalk corrections                          |
| LVV-T1844 | Verify calculation of u-band photometric zero-point RMS  |
| LVV-T1845 | Verify accuracy of photometric transformation to physical scale                                |
| LVV-T1846 | Verify calculation of band-to-band color zero-point accuracy including u-band                  |
| LVV-T1847 | Verify calculation of sensor fraction with unusable pixels                                     |
| LVV-T1862 | Verify determining effectiveness of dark current frame   |
| LVV-T1863 | Verify ability to process Special Programs data alongside normal processing                    |
| LVV-T1865 | Verify implementation of time to L1 public release for Special Programs                        |
| LVV-T1866 | Verify latency of reporting optical transients from Special Programs                           |
| LVV-T1867 | Verify implementation of at least numStreams alert streams supported                           |
| LVV-T1868 | Verify implementation of alert streams distributed within latency limit                        |

## 4 Active Test Cases

This section documents all active test cases that have a status in the Jira/ATM system of Draft, Defined or Approved.

### 4.1 LVV-T10 - DRP-00-00: Installation of the Data Release Production v14.0 science payload

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|
| 1       | Approved | Normal   | Test              | Jim Bosch |

Open LVV-T10 in Jira

#### 4.1.1 Verification Elements

- LVV-139 - DMS-REQ-0308-V-01: Software Architecture to Enable Community Re-Use

#### 4.1.2 Test Items

This test will check:

- That the Data Release Production science payload is available for distribution from documented channels;
- That the Data Release Production science payload can be installed on LSST Data Facility-managed systems.

#### 4.1.3 Predecessors

#### 4.1.4 Environment Needs

**4.1.4.1 Software** All prerequisite packages listed at <https://pipelines.lsst.io/install/prereqs-centos.html> must be available on the test system and on the LSST-VC compute node.

**4.1.4.2 Hardware** This test case shall be executed on a developer system at the LSST Data Facility which serves as the “head node” or otherwise provides access to filesystems shared by the LSST Verification Cluster (LSST-VC). We assume that this system will be lsst-dev01.ncsa.illinois.edu and the filesystem will be a GPFS-based system mounted at /software. The test also requires access to one LSST-VC compute node.

#### 4.1.5 Input Specification

No input data is required for this test case.

#### 4.1.6 Output Specification

The Data Release Production science payload will be made available on a shared filesystem accessible from LSST-VC compute nodes.

#### 4.1.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Release 14.0 of the LSST Science Pipelines will be installed into the GPFS filesystem accessible at /software on lsst-dev01 following the instructions at <a href="https://pipelines.lsst.io/install/newinstall.html">https://pipelines.lsst.io/install/newinstall.html</a> . |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | The lsst_distrib top level package will be enabled:<br>source /software/lsstsw/stack3/loadLSST.bash<br>setup lsst_distrib   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | The “LSST Stack Demo” package will be downloaded onto the test system from <a href="https://github.com/lsst/lsst_dm_stack_demo/releases/tag/14.0">https://github.com/lsst/lsst_dm_stack_demo/releases/tag/14.0</a> and uncompressed.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 4    | Description                                 | The demo package will be executed by following the instructions in its "README" file. The string "Ok." should be returned. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 5    | Description                                 | A shell on an LSST-VC compute node will now be obtained by executing:<br>\$ srun -l -pty bash                              |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 6    | Description                                 | The demo package will be executed on the compute node and the same result obtained.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.2 LVV-T11 - DRP-00-05: Execution of the DRP Science Payload by the Batch Production Service

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|
| 1       | Approved | Normal   | Test              | Jim Bosch |

Open LVV-T11 in Jira

### 4.2.1 Verification Elements

- LVV-46 - DMS-REQ-0106-V-01: Coadded Image Provenance
- LVV-124 - DMS-REQ-0293-V-01: Selection of Datasets
- LVV-134 - DMS-REQ-0303-V-01: Production Monitoring
- LVV-133 - DMS-REQ-0302-V-01: Production Orchestration
- LVV-136 - DMS-REQ-0305-V-01: Task Specification
- LVV-137 - DMS-REQ-0306-V-01: Task Configuration

- LVV-62 - DMS-REQ-0158-V-01: Provide Pipeline Construction Services

#### 4.2.2 Test Items

This test will check that the DRP Science Payload can be executed using a specific version of the Batch Production Service provided by the LSST Data Facility. Since the outputs are stored in the Data Backbone, it too is a component of this test.

#### 4.2.3 Predecessors

LVV-T10 (DRP-00-00)

#### 4.2.4 Environment Needs

**4.2.4.1 Software** All the necessary software will be pre-installed. The software includes the science pipeline codes as well as the Data Management system codes (Batch Processing Service, Data Backbone).

For LDM-503-2, Python 2 versions of software will be used. The science pipeline codes will be provided via the LSST DM Software Stack, release 14.0. The Batch Processing Service and the Data Backbone are initial versions using the DESDM Framework packages. LSST-specific plugins as well as DRP pipeline integration codes are also pre-installed. All python DESDM Framework packages, plugins and integration codes exist in the lsst-dm github with tag 1.01. The DESDM prerequisites come from the official DESDM eups package firstcut Y4N+5. They are installed using DESDM's eups install process.

The ticket branch tickets/DM-12291 of the LSST Software Stack packages meas\_base, pipe\_tasks, and obs\_subaru will be used to change the patch ID naming convention. This is due to issues of having commas in the filenames and data IDs, as discussed in RFC-361; the solution has been agreed in RFC-365 for future implementation in DM-11874, DM-11875, and DM-11876. For LDM-503-2, the software will be installed into the GPFS space at /project/production/ on LSST-VC. A single eups prototype package will be defined to encompass the above mentioned software.

**4.2.4.2 Hardware** This test case shall be executed on a testbed at the LSST Data Facility. For LDM-503-2, this testbed includes:

- LSST Verification Cluster (LSST-VC) with Slurm Job Scheduler
- Submit and compute nodes with read/write access to various GPFS shared filesystems:
  1. Filesystem containing the software stack
  2. Filesystem for the submit side temporary outputs
  3. Filesystem being used by the prototype DataBackbone.(This means that the framework can use a cp transfer protocol between the job and the Data Backbone and does not require additional transfer services to be running.)
  4. Filesystem for the individual job scratch directories.
- Single node Oracle database (version 12c)
- Submit node (lsst-dev01.ncsa.illinois.edu) running the HTCondor Central Manager (version 8.7.3).

#### 4.2.5 Input Specification

A small number of selected tracts of the Hyper Suprime-Cam dataset will be used along with appropriate calibration datasets.

For LDM-503-2, the three tracts of the Hyper Suprime-Cam “RC1” dataset, as defined Appendix A.1.1, will be used. The calibration dataset will be the 20170105 version, defined as per DMTR-31. Raw files known to fail processCcd will be blacklisted.

#### 4.2.6 Output Specification

The output data products will be available from the Data Backbone.

For LDM-503-2, the output data products will be available on the LSST-VC via a shared filesystem and advanced data discovery is done via SQL queries against the Oracle database.

#### 4.2.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Setup. The LSST Science Pipelines and the DESDM Framework, plugins, and integration codes as described in Environment - Software paragraph have already been installed. The Operator merely sets up the expanded stack using eups.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Input raw and calibration data must exist in the Data Backbone. If not, the data will be ingested into Data Backbone.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | The operator tags and blacklists input data as appropriate for test (see Input Specifications §4.2.5).  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 4    | Description                                 | Given the LSST Science Pipelines version, the operator will generate the full config files and schema files (Test Configuration §4.2.7), which are then ingested into the Data Backbone.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 5    | Description                                 | Write a DRP pipeline workflow definition file from scratch or modify an existing file from github making its operations- and dataset-specific inputs match this test. <ul style="list-style-type: none"> <li>(a) For LDM-503-2, the pipeline workflow definition file is written in a workflow control language (wcl) format as used by the DESDM Framework.</li> </ul> |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 6    | Description                                 | Make special hardware requests (e.g., disk or compute node reservations) if needed.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 7    | Description                                 | Execution starts. If HTCondor processes are not already running, start HTCondor processes on compute nodes. This step makes the compute nodes join the HTCondor Central Manager to create a working HTCondor Pool.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 8    | Description                                 | The execution for each tract of the input data in the Input specification section (§4.2.5) will be submitted to the hardware specified in “Environmental Needs - Hardware” section (§4.2.4.1) using the configuration specified in “Test configuration” section (§4.2.7).  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 9    | Description                                 | During execution, the operator will use software to demonstrate the ability to check the processing status. <ul style="list-style-type: none"> <li>(a) For LDM-503-2, the available Batch Production Service monitoring software consists of two commands: one to summarize currently submitted processing, one to get more details of single submission.</li> </ul> |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 10   | Description                                 | If the processing attempt completes, the attempt is marked as completed and tagged as potential for the next test steps. These campaign tags are used to make pre-release QA queries simpler.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 11   | Description                                 | If the processing attempt fails, the attempt is marked as failed.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 12   | Description                                 | If the processing attempt fails due to certain infrastructure configuration or transient instability (e.g., network blips), the processing of the tract can be tried again after the problem is resolved.  |
|      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result  |          |
|------|--|----------|
|      | Expected Result  |          |
| 13   | Description Checks. When the execution finishes, the success of the execution will be verified by checking the existence of the expected output data. <ul style="list-style-type: none"> <li>• (a) For each of the expected data products types (listed in §4.3.2) and each of the expected units (visits, patches, etc), verify the data product is in the Data Backbone and has filesize greater than zero via DB queries.</li> <li>• (b) Verify the physical and location information in Data Backbone DB matches the Data Backbone filesystem and vice-versa.</li> </ul> |          |
|      | Test Data  | No data. |
|      | Expected Result  |          |
| 14   | Description Check that for each data product type has appropriate metadata saved for each file as defined in “Test Configuration” section (§4.2.7).  |          |
|      | Test Data  | No data. |
|      | Expected Result  |          |
| 15   | Description Check provenance <ul style="list-style-type: none"> <li>• (a) Verify that each file can be linked with the step and processing attempt that created it via the Data Backbone.</li> <li>• (b) Verify that the information linking input files to each step was saved to the Oracle database.</li> </ul>   |          |
|      | Test Data  | No data. |
|      | Expected Result  |          |
| 16   | Description Check runtime metrics, such as the number of executions of each code, wallclock per step, wallclock per tract, etc.  |          |
|      | Test Data  | No data. |
|      | Expected Result  |          |

### 4.3 LVV-T12 - DRP-00-10: Data Release Includes Required Data Products

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|
| 1       | Approved | Normal   | Test              | Jim Bosch |

Open LVV-T12 in Jira

#### 4.3.1 Verification Elements

- LVV-165 - DMS-REQ-0334-V-01: Persisting Data Products
- LVV-98 - DMS-REQ-0267-V-01: Source Catalog
- LVV-99 - DMS-REQ-0268-V-01: Forced-Source Catalog
- LVV-106 - DMS-REQ-0275-V-01: Object Catalog
- LVV-110 - DMS-REQ-0279-V-01: Deep Detection Coadds
- LVV-125 - DMS-REQ-0294-V-01: Processing of Datasets

#### 4.3.2 Test Items

This test will check that the basic data products which should be in an data release are generated by execution of the science payload.

These products will include:

- Source catalogs, derived from PVIs and coadded images (DMS-REQ-0267 & DMS-REQ-0277);
- Forced source catalogs (DMS-REQ-0268);
- Object catalogs (DMS-REQ-0275);
- Processed visit images (PVIs; DMS-REQ-0069);
- Coadded images (DMS-REQ-0279);

#### 4.3.3 Predecessors

LVV-T10 (DRP-00-00)

#### 4.3.4 Environment Needs

**4.3.4.1 Software** Release 14.0 of the DM Software Stack will be pre-installed (following the procedure described in DRP-00-00)

**4.3.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

#### 4.3.5 Input Specification

A complete processing of the Hyper Suprime-Cam “RC1” dataset (Appendix A.1.1 through the DRP Science Payload.

This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

#### 4.3.6 Output Specification

None.

#### 4.3.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | The DM Stack shall be initialized using the loadLSST script (as described in DRP-00-00). |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | A “Data Butler” will be initialized to access the repository.                            |
|      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Expected Result                             |  |
| 3    | Description                                 | For each of the expected data products types (listed in Test Items section 4.3.2) and each of the expected units (PVIs, coadds, etc), the data product will be retrieved from the Butler and verified to be non-empty. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

#### 4.4 LVV-T13 - DRP-00-15: Scientific Verification of Source Catalog

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|
| 1       | Approved | Normal   | Test              | Jim Bosch |

Open LVV-T13 in Jira

##### 4.4.1 Verification Elements

- LVV-165 - DMS-REQ-0334-V-01: Persisting Data Products
- LVV-98 - DMS-REQ-0267-V-01: Source Catalog
- LVV-178 - DMS-REQ-0347-V-01: Measurements in catalogs
- LVV-162 - DMS-REQ-0331-V-01: Computing Derived Quantities

##### 4.4.2 Test Items

This test will check that the source catalogs delivered by the DRP science payload meet the requirements laid down by LSE-61.

Specifically, this will demonstrate that:

- Measurements in the catalog are presented in flux units (DMS-REQ-0347);

- Derived quantities are provided in pre-computed columns (DMS-REQ-0331);
- Aperture corrections for different photometry algorithms are consistent.
- Photometry measurements are consistent with reference catalog photometry (including sources not used in photometric calibration).
- Astrometry measurements are consistent with reference catalog positions (including sources not used in astrometric calibration).

This test does not include quantitative targets for the science quality criteria; we instead require for each test that we be able to quickly construct a plot in which such a target can be visualized.

#### 4.4.3 Predecessors

lvv-t10 (DRP-00-00), lvv-t12 (DRP-00-10)

#### 4.4.4 Environment Needs

**4.4.4.1 Software** Release 14.0 of the DM Software Stack will be pre-installed (following the procedure described in DRP-00-00).

**4.4.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

#### 4.4.5 Input Specification

A complete processing of the Hyper Suprime-Cam “RC1” dataset (Appendix A.1.1 through the DRP Science Payload.

This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

#### 4.4.6 Output Specification

None.

#### 4.4.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | The DM Stack shall be initialized using the loadLSST script (as described in LVV-T10 - DRP-00-00).                           |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | A "Data Butler" will be initialized to access the repository.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | Scripts from the pipe_analysis package will be run on every visit to check for the presence of data products and make plots. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

### 4.5 LVV-T14 - DRP-00-25: Scientific Verification of Object Catalog

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|

Open LVV-T14 in Jira

#### 4.5.1 Verification Elements

- LVV-165 - DMS-REQ-0334-V-01: Persisting Data Products
- LVV-106 - DMS-REQ-0275-V-01: Object Catalog

- LVV-178 - DMS-REQ-0347-V-01: Measurements in catalogs
- LVV-162 - DMS-REQ-0331-V-01: Computing Derived Quantities

#### 4.5.2 Test Items

This test will check that the object catalogs delivered by the DRP science payload meet the requirements laid down by LSE-61.

Specifically, this will demonstrate that:

- Measurements in the catalog are presented in flux units (DMS-REQ-0347);
- Derived quantities are provided in pre-computed columns (DMS-REQ-0331);
- Aperture corrections for different photometry algorithms are consistent.
- PSF models correctly predict the ellipticities of stars over each tract.
- Photometry measurements are consistent with reference catalog photometry (including sources not used in photometric calibration).
- Astrometry measurements are consistent with reference catalog positions (including sources not used in astrometric calibration).
- Forced and unforced photometry measurements are consistent.
- The slope of the stellar locus in color-color space is not a function of position on the sky.

This test does not include quantitative targets for the science quality criteria; we instead require for each test that we be able to quickly construct a plot in which such a target can be visualized.

All science quality tests in this section shall distinguish between blended and isolated objects.

#### 4.5.3 Predecessors

LVV-T10 (DRP-00-00)

LVV-T12 (DRP-00-10)

#### 4.5.4 Environment Needs

**4.5.4.1 Software** Release 14.0 of the DM Software Stack will be pre-installed (following the procedure described in DRP-00-00).

**4.5.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

#### 4.5.5 Input Specification

A complete processing of the Hyper Suprime-Cam “RC1” dataset (Appendix A.1.1 through the DRP Science Payload.

This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

#### 4.5.6 Output Specification

None.

#### 4.5.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | The DM Stack shall be initialized using the loadLSST script (as described in LVV-T10 - DRP-00-00).                          |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | A “Data Butler” will be initialized to access the repository.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Scripts from the pipe_analysis package will be run on every tract to check for the presence of data products and make plots |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.6 LVV-T15 - DRP-00-30: Scientific Verification of Processed Visit Images

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|
| 1       | Approved | Normal   | Test              | Jim Bosch |

Open LVV-T15 in Jira

### 4.6.1 Verification Elements

- LVV-165 - DMS-REQ-0334-V-01: Persisting Data Products
- LVV-29 - DMS-REQ-0069-V-01: Processed Visit Images
- LVV-158 - DMS-REQ-0327-V-01: Background Model Calculation
- LVV-12 - DMS-REQ-0029-V-01: Generate Photometric Zeropoint for Visit Image
- LVV-30 - DMS-REQ-0070-V-01: Generate PSF for Visit Images
- LVV-13 - DMS-REQ-0030-V-01: Absolute accuracy of WCS
- LVV-31 - DMS-REQ-0072-V-01: Processed Visit Image Content

### 4.6.2 Test Items

This test will check that the Processed Visit Images (PVIs) delivered by the DRP science payload meet the requirements laid down by LSE-61.

Specifically, this will demonstrate that:

- Processed visit images have been generated and persisted during payload execution;
- Each PVI includes a background model (DMS-REQ-0327), photometric zero-point (DMS-REQ-0029), spatially-varying PSF (DMS-REQ-0070) and WCS (DMS-REQ-0030).
- Saturated pixels are correctly masked.
- Pixels affected by cosmic rays are correctly masked.
- The background is not oversubtracted around bright objects.

This test does not include quantitative targets for the science quality criteria; we instead require for each test that we be able to quickly construct a plot or display summary images that allow such a target can be visualized.

### 4.6.3 Predecessors

LVV-T10

LVV-T12

### 4.6.4 Environment Needs

**4.6.4.1 Software** Release 14.0 of the DM Software Stack will be pre-installed (following the procedure described in DRP-00-00).

**4.6.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

### 4.6.5 Input Specification

A complete processing of the Hyper Suprime-Cam “RC1” dataset (Appendix A.1.1 through the DRP Science Payload.

This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

### 4.6.6 Output Specification

None.

#### 4.6.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | The DM Stack shall be initialized using the loadLSST script (as described in LVV-T10 - DRP-00-00).   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | A "Data Butler" will be initialized to access the repository.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | For each processed CCD, the PVI will be retrieved from the Butler, and the existence of all components described in section Test Items (§§4.6.2) will be verified. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 4    | Description                                 | Scripts from the pipe_analysis package will be run on every visit to check for the presence of data products and make plots  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 5    | Description                                 | Five sensors will be chosen at random from each of two visits and inspected by eye for unmasked artifacts.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

#### 4.7 LVV-T16 - DRP-00-35: Scientific Verification of Coadd Images

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|
| 1       | Approved | Normal   | Test              | Jim Bosch |

### 4.7.1 Verification Elements

- LVV-165 - DMS-REQ-0334-V-01: Persisting Data Products
- LVV-110 - DMS-REQ-0279-V-01: Deep Detection Coadds
- LVV-109 - DMS-REQ-0278-V-01: Coadd Image Method Constraints
- LVV-20 - DMS-REQ-0047-V-01: Provide PSF for Coadded Images

### 4.7.2 Test Items

This test will check that the coadded images delivered by the DRP science payload meet the requirements laid down by LSE-61.

Specifically, this will demonstrate that:

- Coadds have been generated and persisted during payload execution;
- Each coadd provides a spatially varying PSF model (DMS-REQ-0047).
- Saturated pixels are correctly masked.
- Pixels affected by satellite trails and ghosts are rejected from the coadd.
- The background is not oversubtracted around bright objects.

This test does not include quantitative targets for the science quality criteria; we instead require for each test that we be able to quickly construct a plot or display summary images that allow such a target can be visualized.

### 4.7.3 Predecessors

LVV-T10 (DRP-00-00)

LVV-T12 (DRP-00-10)

#### 4.7.4 Environment Needs

**4.7.4.1 Software** Release 14.0 of the DM Software Stack will be pre-installed (following the procedure described in DRP-00-00).

**4.7.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

#### 4.7.5 Input Specification

A complete processing of the Hyper Suprime-Cam “RC1” dataset (Appendix A.1.1 through the DRP Science Payload.

This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

#### 4.7.6 Output Specification

None.

#### 4.7.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | The DM Stack shall be initialized using the loadLSST script (as described in LVV-T10 - DRP-00-00) |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | A “Data Butler” will be initialized to access the repository.                                     |
|      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Expected Result                             |  |
| 3    | Description                                 | For each combination of tract/patch/filter, the PVI will be retrieved from the Butler, and the existence of all components described in Test items section 4.6.2 will be verified. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 4    | Description                                 | Scripts from the pipe_analysis package will be run on every visit to check for the presence of data products and make plots  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 5    | Description                                 | Ten patches will be chosen at random and inspected by eye for unmasked artifacts.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

#### 4.8 LVV-T17 - AG-00-00: Installation of the Alert Generation v16.0 science payload.

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T17 in Jira

##### 4.8.1 Verification Elements

- LVV-139 - DMS-REQ-0308-V-01: Software Architecture to Enable Community Re-Use

##### 4.8.2 Test Items

This test will check:

- That the Alert Generation science payload is available for distribution from documented channels;
- That the Alert Generation science payload can be installed on LSST Data Facility-managed systems.

### 4.8.3 Predecessors

None.

### 4.8.4 Environment Needs

**4.8.4.1 Software** All prerequisite packages listed at <https://pipelines.lsst.io/install/prereqs/centos.html> must be available on the test system and on the LSST-VC compute node.

**4.8.4.2 Hardware** This test case shall be executed on a developer system at NCSA which serves as the “head node” or otherwise provides access to filesystems shared by the LSST Verification Cluster (LSST-VC). We assume that this system will be `lsst-dev01.ncsa.illinois.edu` and the filesystem will be a GPFS-based system mounted at `/software`. The test also requires access to one LSST-VC compute node.

### 4.8.5 Input Specification

No input data is required for this test case.

### 4.8.6 Output Specification

The Alert Generation science payload will be made available on a shared filesystem accessible from LSST-VC compute nodes.

### 4.8.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Release 16.0 of the LSST Science Pipelines will be installed into the GPFS filesystem accessible at /software on lsst-dev01 following the instructions at <a href="https://pipelines.lsst.io/install/newinstall.html">https://pipelines.lsst.io/install/newinstall.html</a> . |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | The lsst_distrib top level package will be enabled:<br><br><pre>source /software/lsstsw/stack3/loadLSST.bash setup lsst_distrib</pre>   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | The "LSST Stack Demo" package will be downloaded onto the test system from <a href="https://github.com/lsst/lsst_dm_stack_demo/releases/tag/16.0">https://github.com/lsst/lsst_dm_stack_demo/releases/tag/16.0</a> and uncompressed.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 4    | Description                                 | The demo package will be executed by following the instructions in its "README" file. The string "Ok." should be returned. Specifically, we execute:<br><pre>setup obs_sdss ./bin/demo.sh python bin/compare expected/Linux64/detected-sources.txt</pre>                      |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 5    | Description                                 | A shell on an LSST-VC compute node will now be obtained by executing:<br><pre>\$ srun -l -pty bash</pre>  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 6    | Description                                 | The demo package will be executed on the compute node and the same result obtained.   |
|      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result   |          |
|------|---|----------|
|      | Expected Result   |          |
| 7    | <p>Description</p> <p>The Alert Production datasets and packages are not yet part of lsst_distrib and so must be installed separately. They will be installed as follows on the GPFS filesystem:</p> <pre> setup git_lfs git clone https://github.com/lsst/ap_verify_hits2015.git  export AP_VERIFY_HITS2015_DIR=\$PWD/ap_verify_hits2015 cd \$AP_VERIFY_HITS2015_DIR setup -r . cd-  setup obs_decam git clone https://github.com/lsst-dm/ap_association cd ap_association setup -k -r . scons cd-  git clone https://github.com/lsst-dm/ap_pipe cd ap_pipe setup -k -r . scons cd-  git clone https://github.com/lsst-dm/ap_verify cd ap_verify setup -k -r . scons cd-  and any errors or failures reported.</pre> |          |
|      | Test Data   | No data. |
|      | Expected Result   |          |

## 4.9 LVV-T18 - AG-00-05: Alert Generation Produces Required Data Products

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T18 in Jira

### 4.9.1 Verification Elements

- LVV-29 - DMS-REQ-0069-V-01: Processed Visit Images
- LVV-7 - DMS-REQ-0010-V-01: Difference Exposures
- LVV-100 - DMS-REQ-0269-V-01: DIASource Catalog
- LVV-102 - DMS-REQ-0271-V-01: Max nearby galaxies associated with DIASource

### 4.9.2 Test Items

This test will check that the basic data products produced by Alert Generation are generated by execution of the science payload.

These products will include:

- Processed visit images (PVIs; DMS-REQ-0069);
- Difference Exposures (DMS-REQ-0010);
- DIASource catalogs (DMS-REQ-0269);
- DIAObject catalogs (DMS-REQ-0271);

### 4.9.3 Predecessors

LVV-T17 (AG-00-00)

### 4.9.4 Environment Needs

**4.9.4.1 Software** Release 16.0 of the DM Software Stack will be pre-installed (following the procedure described in AG-00-00).

**4.9.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

#### 4.9.5 Input Specification

A complete processing of the DECam “HiTS” dataset, as defined at <https://dmtn-039.lsst.io/> and [https://github.com/lsst/ap\\_verify\\_hits2015](https://github.com/lsst/ap_verify_hits2015), through the Alert Generation science payload. This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

#### 4.9.6 Output Specification

None.

#### 4.9.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | The DM Stack and Alert Processing packaged shall be initialized as described in LVT-T17 (AG-00-00). |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 2    | Description                                 | The alert generation processing will be executed using the verification cluster:   |
|      |   | <pre> """bash python ap_verify/bin/prepare_demo_slurm_files.py # At present we must run a single ccd+visit to handle ingestion before # parallel processing can begin ./ap_verify/bin/exec_demo_run_1ccd.sh 410915 25 ln -s ap_verify/bin/demo_run.sl ln -s ap_verify/bin/demo_cmds.conf sbatch demo_run.sl """ </pre> |
|      |   | and any errors or failures reported.   |
|      | Test Data                                   | No data.   |
| 3    | Expected Result                             |  |
|      | Description                                 | A "Data Butler" will be initialized to access the repository.  |
|      | Test Data                                   | No data.   |
| 4    | Expected Result                             |  |
|      | Description                                 | For each of the expected data products types (listed in §4.2.2) and each of the expected units (PVLs, catalogs, etc.), the data product will be retrieved from the Butler and verified to be non-empty.  |
|      | Test Data                                   | No data.   |
| 5    | Expected Result                             |  |
|      | Description                                 | DIAObjects are currently only stored in a database, without shims to the Butler, so the existence of the database table and its non-empty contents will be verified by directly accessing it using sqlite3 and executing appropriate SQL queries.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

#### 4.10 LVV-T19 - AG-00-10: Scientific Verification of Processed Visit Images

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T19 in Jira

#### 4.10.1 Verification Elements

- LVV-29 - DMS-REQ-0069-V-01: Processed Visit Images
- LVV-158 - DMS-REQ-0327-V-01: Background Model Calculation
- LVV-12 - DMS-REQ-0029-V-01: Generate Photometric Zeropoint for Visit Image
- LVV-30 - DMS-REQ-0070-V-01: Generate PSF for Visit Images
- LVV-13 - DMS-REQ-0030-V-01: Absolute accuracy of WCS
- LVV-31 - DMS-REQ-0072-V-01: Processed Visit Image Content

#### 4.10.2 Test Items

This test will check that the Processed Visit Images (PVIs) delivered by the alert generation science payload meet the requirements laid down by LSE-61. Specifically, this will demonstrate that:

- Processed visit images have been generated and persisted during payload execution;
- Each PVI includes a science pixel array, a mask array, and a variance array. (DMS-REQ-0072).
- Each PVI includes a background model (DMS-REQ-0327), photometric zero-point (DMS-REQ-0029), spatially-varying PSF (DMS-REQ-0070) and WCS (DMS-REQ-0030).
- Saturated pixels are correctly masked.
- Pixels affected by cosmic rays are correctly masked.
- The background is not oversubtracted around bright objects.

This test does not include quantitative targets for the science quality criteria.

### 4.10.3 Predecessors

LVT-T17 (AG-00-00)

LVT-T18 (AG-00-05)

### 4.10.4 Environment Needs

**4.10.4.1 Software** Release 14.0 of the DM Software Stack will be pre-installed (following the procedure described in AG-00-00).

**4.10.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

### 4.10.5 Input Specification

A complete processing of the DECam “HiTS” dataset, as defined at <https://dmtn-039.lsst.io/> and [https://github.com/lsst/ap\\_verify\\_hits2015](https://github.com/lsst/ap_verify_hits2015), through the Alert Generation science payload. This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

### 4.10.6 Output Specification

None.

### 4.10.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | The DM Stack shall be initialized using the loadLSST script (as described in LVV-T17 - AG-00-00). |
|      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Expected Result                             |  |
| 2    | Description                                 | A "Data Butler" will be initialized to access the repository.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | For each processed CCD, the PVI will be retrieved from the Butler, and the existence of all components described in §4.3.2 will be verified. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 4    | Description                                 | Five sensors will be chosen at random from each of two visits and inspected by eye for unmasked artifacts.                                   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

#### 4.11 LVV-T20 - AG-00-15: Scientific Verification of Difference Images

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T20 in Jira

##### 4.11.1 Verification Elements

- LVV-7 - DMS-REQ-0010-V-01: Difference Exposures
- LVV-32 - DMS-REQ-0074-V-01: Difference Exposure Attributes

## 4.11.2 Test Items

This test will check that the difference images delivered by the Alert Generation science payload meet the requirements laid down by LSE-61.

Specifically, this will demonstrate that:

- Difference images have been generated and persisted during payload execution;
- Each difference image includes information about the identity of the input exposures, and metadata such as a representation of the PSF matching kernel (DMS-REQ-0074);
- Masks are correctly propagated from the input images.

This test does not include quantitative targets for the science quality criteria.

## 4.11.3 Predecessors

LVV-T17 (AG-00-00)

LVV-T18 (AG-00-05)

## 4.11.4 Environment Needs

**4.11.4.1 Software** Release 14.0 of the DM Software Stack will be pre-installed (following the procedure described in AG-00-00).

**4.11.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

## 4.11.5 Input Specification

A complete processing of the DECam “HiTS” dataset, as defined at <https://dmtn-039.lsst.io/> and [https://github.com/lsst/ap\\_verify\\_hits2015](https://github.com/lsst/ap_verify_hits2015), through the Alert Generation science payload. This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

## 4.11.6 Output Specification

None.

## 4.11.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | The DM Stack shall be initialized using the loadLSST script (as described in LVV-T-17 AG-00-00).  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | A "Data Butler" will be initialized to access the repository.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | For each processed CCD, the difference image will be retrieved from the Butler, and the existence of all components described in §4.4.2 will be verified. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 4    | Description                                 | Five sensors will be chosen at random from each of two visits and the masks of the input and difference images compared by eye.                           |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.12 LVV-T21 - AG-00-20: Scientific Verification of DIASource Catalog

| Version | Status | Priority | Verification Type | Owner |
|---------|--------|----------|-------------------|-------|
|---------|--------|----------|-------------------|-------|

|                      |          |        |      |            |
|----------------------|----------|--------|------|------------|
| 1                    | Approved | Normal | Test | Eric Bellm |
| Open LVV-T21 in Jira |          |        |      |            |

#### 4.12.1 Verification Elements

- LVV-100 - DMS-REQ-0269-V-01: DIASource Catalog
- LVV-101 - DMS-REQ-0270-V-01: Faint DIASource Measurements
- LVV-178 - DMS-REQ-0347-V-01: Measurements in catalogs
- LVV-162 - DMS-REQ-0331-V-01: Computing Derived Quantities
- LVV-18 - DMS-REQ-0043-V-01: Provide Calibrated Photometry

#### 4.12.2 Test Items

This test will check that the difference image source catalogs delivered by the Alert Generation science payload meet the requirements laid down by LSE-61.

- Specifically, this will demonstrate that:
  - Measurements in the catalog are presented in flux units (DMS-REQ-0347);
  - Each DIASource record contains an appropriate subset of the attributes required by DMS-REQ-0269. In particular, the LDM-503-3-era pipeline is expected to provide DIASource positions (sky and focal plane), fluxes, and flags indicative of issues encountered during processing.
  - Faint DIASources satisfying additional criteria are stored (DMS-REQ-0270).
  - Derived quantities are provided in pre-computed columns (DMS-REQ-0331);

This test does not include quantitative targets for the science quality criteria.

### 4.12.3 Predecessors

LVT-T17 (AG-00-00)

LVT-T18 (AG-00-05)

### 4.12.4 Environment Needs

**4.12.4.1 Software** Release 14.0 of the DM Software Stack will be pre-installed (following the procedure described in AG-00-00).

**4.12.4.2 Hardware** The test shall be carried out on a machine with at least 16 GB of RAM and multiple CPU cores which has access to the /datasets shared (GPFS) filesystem at the LSST Data Facility.

### 4.12.5 Input Specification

A complete processing of the DECam “HiTS” dataset, as defined at <https://dmtm-039.lsst.io/> and [https://github.com/lsst/ap\\_verify\\_hits2015](https://github.com/lsst/ap_verify_hits2015), through the Alert Generation science payload. This dataset shall be made available in a standard LSST data repository, accessible via the “Data Butler”.

It is not required that all combinations of visit and CCD have been processed successfully: a number of failures are expected. However, documentation to describe processing failures should be provided.

### 4.12.6 Output Specification

None.

### 4.12.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | The DM Stack shall be initialized using the loadLSST script (as described in LVT-T17 - AG-00-00). |
|      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Expected Result                             |  |
| 2    | Description                                 | A "Data Butler" will be initialized to access the repository.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | DIASource records will be accessed by querying the Butler, then examined interactively at a Python prompt. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

#### 4.13 LVV-T22 - AG-00-25: Scientific Verification of DIAObject Catalog

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T22 in Jira

##### 4.13.1 Verification Elements

- LVV-116 - DMS-REQ-0285-V-01: Level 1 Source Association
- LVV-102 - DMS-REQ-0271-V-01: Max nearby galaxies associated with DIASource
- LVV-103 - DMS-REQ-0272-V-01: DIAObject Attributes
- LVV-178 - DMS-REQ-0347-V-01: Measurements in catalogs
- LVV-162 - DMS-REQ-0331-V-01: Computing Derived Quantities
- LVV-18 - DMS-REQ-0043-V-01: Provide Calibrated Photometry

### 4.13.2 Test Items

This test will check that the DIAObject catalogs delivered by the Alert Generation science payload meet the requirements laid down by LSE-61.

Specifically, this will demonstrate that:

- DIAObjects are recorded with unique identifiers (DMS-REQ-0271);
- Measurements in the catalog are presented in flux units (DMS-REQ-0347);
- EachDIAObjectrecordcontainscontainsanappropriatesetofsummaryattributes(DMS- REQ-0271 and DMS-REQ-0272). Note:
  - This test is executed independently of the Data Release Production system. Hence, DIAObjects are not associated to Objects, and the association metadata specified by DMS-REQ-0271 is not expected to be available.
  - TheLDM-503-3erapipelineisnotexpectedtoallocateorpersistallattributesspec- ified by DMS-REQ-0272 requirement.
- Relevant derived quantities are provided in pre-computed columns (DMS-REQ-0331);

This test does not include quantitative targets for the science quality criteria.

|                      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             |   |
| 6    | Description                                 | Create the coadd pixel level mask map for the HSC PDR dataset.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 7    | Description                                 | Generate compressed representation of the mask map.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 8    | Description                                 | Sample randomly from both the pixel level and compressed depth maps. Compare the distribution of depths sampled from the pixel level depth map to that sampled from the compressed representation.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 9    | Description                                 | Divide the mask planes into two groups: INFO and BAD. BAD flags are any that would cause a particular pixel to be excluded from processing: e.g. EDGE, SAT, BAD. Sample masks from both the pixel level mask map and the compressed mask map. |
|      |   | For each sample, compute $\text{sum}(\text{mask\_pixel} \text{ xor } \text{mask\_compressed})$ . Produce the distribution of the number of bits that differ between the samples.  |
|      |   | Repeat for both the INFO flags and the BAD flags.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

#### 4.15 LVV-T24 - Verify implementation of Computing Derived Quantities

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Melissa Graham |

Open LVV-T24 in Jira

#### 4.15.1 Verification Elements

- LVV-162 - DMS-REQ-0331-V-01: Computing Derived Quantities

#### 4.15.2 Test Items

To confirm that common derived quantities (apparent magnitude, FWHM in arcsec, ellipticity) are available to an end-user by, e.g., ensuring a color-color diagram is easy to construction, fitting functions to derived data, or generating other common scientific derivatives.

#### 4.15.3 Predecessors

#### 4.15.4 Environment Needs

##### 4.15.4.1 Software

##### 4.15.4.2 Hardware

#### 4.15.5 Input Specification

Example data set (e.g., non-LSST or LSST commissioning) loaded into the Science Platform in a format consistent with the DPDD.

#### 4.15.6 Output Specification

#### 4.15.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |   |
|----------------------|---|---|
| 1-1 from<br>LVV-T860 | Description                                 | The 'path' that you will use depends on where you are running the science pipelines. Options:   |
|                      | Test Data                                   |   |
|                      | Expected Result                             | <ul style="list-style-type: none"> <li>• local (newinstall.sh - based install):[path_to_installation]/loadLSST.bash</li> <li>• development cluster ("lsst-dev"): /software/lsstsw/stack/loadLSST.bash</li> <li>• LSP Notebook aspect (from a terminal): /opt/lsst/software/stack/loadLSST.bash</li> </ul> <p>From the command line, execute the commands below in the example code:</p> |
| 2-1 from<br>LVV-T987 | Test Data                                   |   |
|                      | Expected Result                             | Science pipeline software is available for use. If additional packages are needed (for example, 'obs' packages such as 'obs_subaru'), then additional 'setup' commands will be necessary.   |
|                      |   | To check versions in use, type:<br>eups list -s   |
| 3                    | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | Butler repo available for reading.  |
| 4                    | Description                                 | For each of the expected data product types (listed in Test Items section 4.3.2) and each of the expected units (PVI, coadds, etc), retrieve the data product from the Butler and verify it to be non-empty.  |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |
| 5                    | Description                                 | Load into DPDD+Science Platform   |
|                      | Test Data                                   | No data.  |

| 6                    | Description                                 | Constructing color-color diagram and fitting stellar locus in Science Platform.   |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             |   |
| 6    | Description                                 | Invite three members of commissioning team to create color-color diagram from coadd catalogs based on merged coadd reference catalog. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.16 LVV-T25 - Verify implementation of Denormalizing Database Tables

| Version | Status | Priority | Verification Type | Owner        |
|---------|--------|----------|-------------------|--------------|
| 1       | Draft  | Normal   | Test              | Colin Slater |

Open LVV-T25 in Jira

### 4.16.1 Verification Elements

- LVV-163 - DMS-REQ-0332-V-01: Denormalizing Database Tables

### 4.16.2 Test Items

Verify that commonly useful views of data are easy to obtain through the Science Platform.

### 4.16.3 Predecessors

### 4.16.4 Environment Needs

#### 4.16.4.1 Software

#### 4.16.4.2 Hardware

#### 4.16.5 Input Specification

#### 4.16.6 Output Specification

#### 4.16.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Connect to the Science Platform's portal query interface.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | List the available views in the database.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Take 20 sampled queries and determine which are easily done on views and which require complicated joins. Discuss the complicated ones and determine if any could be simplified by adding additional views. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

### 4.17 LVV-T26 - Verify implementation of Maximum Likelihood Values and Covariances

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T26 in Jira

#### 4.17.1 Verification Elements

- LVV-164 - DMS-REQ-0333-V-01: Maximum Likelihood Values and Covariances

### 4.17.2 Test Items

- Check that all measurements in source and object schemas include columns containing uncertainties, including covariances between jointly-measured quantities.
- Check that all model-fit measurements in source and object schemas include columns that report goodness-of-fit.
- Check that most sources and objects with successful measurements report finite uncertainty values for those measurements.
- Check that most sources and objects with successful model-fit measurements report finite goodness-of-fit values.

### 4.17.3 Predecessors

### 4.17.4 Environment Needs

#### 4.17.4.1 Software

#### 4.17.4.2 Hardware

### 4.17.5 Input Specification

| 4                    | Description                                 | Verify that maximum likelihood and covariant quantities are provided. Test and manually inspect that they are reasonable (finite, appropriately normed).  |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |

## 4.18 LVV-T27 - Verify implementation of Data Availability

| Version | Status | Priority | Verification Type | Owner                   |
|---------|--------|----------|-------------------|-------------------------|
| 1       | Draft  | Normal   | Test              | Gregory Dubois-Felsmann |

Open LVV-T27 in Jira

### 4.18.1 Verification Elements

- LVV-177 - DMS-REQ-0346-V-01: Data Availability

### 4.18.2 Test Items

Determine if all required categories of raw data (specifically enumerated: raw exposures, calibration frames, telemetry, configuration metadata) can be located through the Science Platform and are available for download. Verify through (1) administrative review; (2) checking with precursor data; (3) checking on early data feeds from the Summit such as from AuxTel and ComCam.

### 4.18.3 Predecessors

### 4.18.4 Environment Needs

#### 4.18.4.1 Software

#### 4.18.4.2 Hardware

### 4.18.5 Input Specification

### 4.18.6 Output Specification

### 4.18.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Invite two reviewers to review that plan that seems reasonable to expect the archiving and provision of raw data                       |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | Pass a set of HSC data through (equal in size to the first public data release) the data backbone through ingest and provide interface |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | Track the ingestion of AuxTel data during one month in 2018-2019 and verify delivery and test download.                                |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

#### 4.19 LVV-T28 - Verify implementation of Measurements in catalogs

| Version | Status   | Priority | Verification Type | Owner        |

| 1    | Description                                 | Inject signals of different relative strength                     |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Apply Camera cross-talk correction                                |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Verify that DMS system can import the cross-talk corrected images |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 4    | Description                                 | Verify that images are corrected for crosstalk                    |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

### 4.23 LVV-T32 - Verify implementation of Raw Image Assembly

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Kian-Tat Lim |

Open LVV-T32 in Jira

#### 4.23.1 Verification Elements

- LVV-11 - DMS-REQ-0024-V-01: Raw Image Assembly

#### 4.23.2 Test Items

Verify that the raw exposure data from all readout channels in a sensor can be assembled into a single image, and that all required/relevant metadata are associated with the image data.

#### 4.23.3 Predecessors

#### 4.23.4 Environment Needs

##### 4.23.4.1 Software

##### 4.23.4.2 Hardware

#### 4.23.5 Input Specification

#### 4.23.6 Output Specification

#### 4.23.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Ingest data from the L1 Camera Test Stand DAQ. |
|      | Test Data                                   | No data.                                       |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             |   |
| 2    | Description                                 | Simulate all different modes of data gathering.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Verify that a raw image is constructed in correct format.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A single raw image combining data from all readout channels for a given sensor.   |
| 4    | Description                                 | Verify that a raw image is constructed with correct metadata.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Image header or ancillary table contains the required metadata about the observing context in which data were gathered. |

## 4.24 LVV-T33 - Verify implementation of Raw Science Image Metadata

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Kian-Tat Lim |

Open LVV-T33 in Jira

### 4.24.1 Verification Elements

- LVV-28 - DMS-REQ-0068-V-01: Raw Science Image Metadata
- LVV-1234 - OSS-REQ-0122-V-01: Provenance

### 4.24.2 Test Items

Verify successful ingestion of raw data from L1 Test Stand DAQ and that image metadata is present and queryable.

### 4.24.3 Predecessors

LVV-T29, LVV-T32

### 4.24.4 Environment Needs

#### 4.24.4.1 Software

#### 4.24.4.2 Hardware

### 4.24.5 Input Specification

### 4.24.6 Output Specification

### 4.24.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Identify (or gather) a dataset of raw science images.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | Verify that time of exposure start/end, site metadata, telescope metadata, and camera metadata are stored in DMS system. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Raw image data contain the required metadata.  |

## 4.25 LVV-T34 - Verify implementation of Guider Calibration Data Acquisition

| Version | Status | Priority | Verification Type | Owner |
|---------|--------|----------|-------------------|-------|
|---------|--------|----------|-------------------|-------|

|                      |         |        |      |              |
|----------------------|---------|--------|------|--------------|
| 1                    | Defined | Normal | Test | Kian-Tat Lim |
| Open LVV-T34 in Jira |         |        |      |              |

## 4.25.1 Verification Elements

- LVV-96 - DMS-REQ-0265-V-01: Guider Calibration Data Acquisition

## 4.25.2 Test Items

Verify successful

1. Ingestion of calibration frames from L1 Test Stand DAQ
2. Execution of CPP payloads
3. Availability of observed guider calibration products

## 4.25.3 Predecessors

## 4.25.4 Environment Needs

### 4.25.4.1 Software

### 4.25.4.2 Hardware

## 4.25.5 Input Specification

## 4.25.6 Output Specification

## 4.25.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Ingest calibration frames for the guider sensors from L1 Test Stand DAQ |
|      | Test Data                                   | No data.  |

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
|                    | Expected Result                             |  |
| 2-1 from LVV-T1060 | Description                                 | Execute the Calibration Products Production payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone. |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 2-2 from LVV-T1060 | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.  |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 3                  | Description                                 | Observe that guider calibration products have been produced.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | Well-formed calibration frames for the guider sensors.   |

## 4.26 LVV-T35 - Verify implementation of Nightly Data Accessible Within 24 hrs

| Version | Status | Priority | Verification Type | Owner      |
|---------|--------|----------|-------------------|------------|
| 1       | Draft  | Normal   | Test              | Eric Bellm |

Open LVV-T35 in Jira

### 4.26.1 Verification Elements

- LVV-175 - DMS-REQ-0004-V-01: Time to L1 public release

### 4.26.2 Test Items

#### Test Items

Verify that

1. Alerts are available within OTT1
2. Level 1 Data Products are available within L1PublicT
3. Solar System Object orbits are available within L1PublicT of the updated calculations completion on the following night.

#### 4.26.3 Predecessors

#### 4.26.4 Environment Needs

##### 4.26.4.1 Software

##### 4.26.4.2 Hardware

#### 4.26.5 Input Specification

#### 4.26.6 Output Specification

#### 4.26.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-1 from<br>LVV-T860 | Description                                 | <p>The 'path' that you will use depends on where you are running the science pipelines. Options:</p> <ul style="list-style-type: none"> <li>• local (newinstall.sh - based install):[path_to_installation]/loadLSST.bash</li> <li>• development cluster ("lsst-dev"): /software/lsstsw/stack/loadLSST.bash</li> <li>• LSP Notebook aspect (from a terminal): /opt/lsst/software/stack/loadLSST.bash</li> </ul> <p>From the command line, execute the commands below in the example code:</p> |
|                      | Test Data                                   |  |

| Step              | Description, Input Data and Expected Result |  |
|-------------------|---|--|
|                   | Expected Result                             | Science pipeline software is available for use. If additional packages are needed (for example, 'obs' packages such as 'obs_subaru'), then additional 'setup' commands will be necessary.  |
|                   |   | To check versions in use, type:<br><code>eups list -s</code>   |
| 2-1 from LVV-T866 | Description                                 | Perform the steps of Alert Production (including, but not necessarily limited to, single frame processing, ISR, source detection/measurement, PSF estimation, photometric and astrometric calibration, difference imaging, DIASource detection/measurement, source association). During Operations, it is presumed that these are automated for a given dataset. |
|                   | Test Data                                   |  |
|                   | Expected Result                             | An output dataset including difference images and DIASource and DIAObject measurements.  |
| 2-2 from LVV-T866 | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.  |
|                   | Test Data                                   |  |
|                   | Expected Result                             |  |
| 3                 | Description                                 | Time processing of data starting from (pre-ingested) raw files until an alert is available for distribution; verify that this time is less than OTT1.  |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |
| 4                 | Description                                 | Time processing of data starting from (pre-ingested) raw files until the required data products are available in the Science Platform. Verify that this time is less than L1PublicT.   |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |
| 5                 | Description                                 | Run MOPS on 1 night equivalent of LSST observing worth of precursor data and verify that Solar System Object orbits can be updated within 24 hours.  |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |
| 6                 | Description                                 | Record time between completion of MOPS processing and availability of the updated SSOObject catalogue through the Science Platform; verify this time is less than L1PublicT.   |

| Step | Description, Input Data and Expected Result |          |
|------|---|----------|
|      | Test Data                                   | No data. |
|      | Expected Result                             |          |

| 2-1 from<br>LVV-T866 | Description                                 | Perform the steps of Alert Production (including, but not necessarily limited to, single frame processing, ISR, source detection/measurement, PSF estimation, photometric and astrometric calibration, difference imaging, DIASource detection/measurement, source association). During Operations, it is presumed that these are automated for a given dataset.  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | An output dataset including difference images and DIASource and DIAObject measurements.   |
| 2-2 from<br>LVV-T866 | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.   |
|                      | Test Data                                   |   |
|                      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 3    | Description                                 | For each of HSC PDR and DECam HiTS data: set up three different templates and run subtractions on 10 different images from at least two different filters. Verify that we can recover the provenance information about which template was used for each subtraction, which input images were used for that template, and that we can successfully extract the PSF matching kernel. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.29 LVV-T38 - Verify implementation of Processed Visit Images

| Version | Status  | Priority | Verification Type | Owner      |
|---------|---------|----------|-------------------|------------|
| 1       | Defined | Normal   | Test              | Eric Bellm |

Open LVV-T38 in Jira

### 4.29.1 Verification Elements

- LVV-29 - DMS-REQ-0069-V-01: Processed Visit Images

### 4.29.2 Test Items

Verify that the DMS

1. Successfully produces Processed Visit Images, where the instrument signature has been removed.
2. Successfully combines images obtained during a standard visit.

### 4.29.3 Predecessors

### 4.29.4 Environment Needs

#### 4.29.4.1 Software

#### 4.29.4.2 Hardware

#### 4.29.5 Input Specification

#### 4.29.6 Output Specification

#### 4.29.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Identify suitable precursor datasets containing unprocessed raw images.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | Run the Prompt Processing payload on these data. Verify that Processed Visit Images are generated at correct size and with significant instrumental artifacts removed.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Raw precursor dataset images have been processed into Processed Visit Images, with instrumental artifacts corrected.   |
| 3    | Description                                 | Run camera test stand data through full acquisition+backbone+ISR.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 4    | Description                                 | Run simulated LSST data with calibrations through prompt processing system and inspect Processed Visit images to verify that they have been cleaned of significant artifacts and are of the correct, shape, and described orientation. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Raw images have been processed into Processed Visit Images, with instrumental artifacts corrected.   |

### 4.31.1 Verification Elements

- LVV-13 - DMS-REQ-0030-V-01: Absolute accuracy of WCS

### 4.31.2 Test Items

Verify that Processed Visit Images produced by the AP and DRP pipelines include FITS WCS accurate to specified **astrometricAccuracy** over the bounds of the image.

### 4.31.3 Predecessors

### 4.31.4 Environment Needs

#### 4.31.4.1 Software

#### 4.31.4.2 Hardware

### 4.31.5 Input Specification

### 4.31.6 Output Specification

### 4.31.7 Test Procedure

| Step | Description, Input Data and Expected Result                          |
|------|--|
| 1    | Description Identify an appropriate processed dataset for this test. |
|      | Test Data No data.   |

| Step              | Description, Input Data and Expected Result |   |
|-------------------|---|---|
|                   | Expected Result                             | A dataset with Processed Visit Images available.  |
| 2-1 from LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:  |
|                   | Test Data                                   |   |
|                   | Expected Result                             | Butler repo available for reading.  |
| 3                 | Description                                 | Select a single visit from the dataset, and extract its WCS object and the source list.   |
|                   | Test Data                                   | No data.  |
|                   | Expected Result                             | A table containing detected sources, and a WCS object associated with that catalog.   |
| 4                 | Description                                 | Confirm that each CCD within the visit image contains at least <b>astrometricMinStandards</b> astrometric standards that were used in deriving the astrometric solution.  |
|                   | Test Data                                   | No data.  |
|                   | Expected Result                             | At least <b>astrometricMinStandards</b> from each CCD were used in determining the WCS solution.  |
| 5                 | Description                                 | Starting from the XY pixel coordinates of the sources, apply the WCS to obtain RA, Dec coordinates.   |
|                   | Test Data                                   | No data.  |
|                   | Expected Result                             | A list of RA, Dec coordinates for all sources in the catalog.   |
| 6                 | Description                                 | We will assume that Gaia provides a source of "truth." Match the source list to Gaia DR2, and calculate the positional offset between the test data and the Gaia catalog.   |
|                   | Test Data                                   | No data.  |
|                   | Expected Result                             | A matched catalog of sources in common between the test source list and Gaia DR2.   |
| 7                 | Description                                 | Apply appropriate cuts to extract the optimal dataset for comparison, then calculate statistics (median, 1-sigma range, etc.; also plot a histogram) of the offsets in milliarcseconds. Confirm that the offset is less than <b>astrometricAccuracy</b> . |
|                   | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             | Histogram and relevant statistics needed to confirm that the WCS transformation is accurate.                    |
| 8    | Description                                 | Repeat Step 5, but for subregions of the image, to confirm that the accuracy criterion is met at all positions. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | <b>astrometricAccuracy</b> requirement is met over the entire image.  |

## 4.32 LVV-T41 - Verify implementation of Generate PSF for Visit Images

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|
| 1       | Approved | Normal   | Test              | Jim Bosch |

Open LVV-T41 in Jira

### 4.32.1 Verification Elements

- LVV-30 - DMS-REQ-0070-V-01: Generate PSF for Visit Images

### 4.32.2 Test Items

Verify that Processed Visit Images produced by the DRP and AP pipelines are associated with a model from which one can obtain an image of the PSF given a point on the image.

### 4.32.3 Predecessors

### 4.32.4 Environment Needs

#### 4.32.4.1 Software

#### 4.32.4.2 Hardware

#### 4.32.5 Input Specification

#### 4.32.6 Output Specification

#### 4.32.7 Test Procedure

| Step              | Description, Input Data and Expected Result |   |
|-------------------|---|---|
| 1                 | Description                                 | Identify a dataset with processed visit images in multiple filters.   |
|                   | Test Data                                   | No data.  |
|                   | Expected Result                             |   |
| 2-1 from LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:  |
|                   | Test Data                                   |   |
|                   | Expected Result                             | Butler repo available for reading.  |
| 3                 | Description                                 | Select Objects classified as point sources on at least 10 different processed visit images (including all bands). Evaluate the PSF model at the positions of these Objects, and verify that subtracting a scaled version of the PSF model from the processed visit image yields residuals consistent with pure noise. |
|                   | Test Data                                   | No data.  |
|                   | Expected Result                             | Images with the PSF model subtracted, leaving only residuals that are consistent with being noise.  |

### 4.33 LVV-T42 - Verify implementation of Processed Visit Image Content

| Version | Status  | Priority | Verification Type | Owner     |

#### 4.33.1 Verification Elements

- LVV-31 - DMS-REQ-0072-V-01: Processed Visit Image Content

## 4.33.2 Test Items

Verify that Processed Visit Images produced by the DRP and AP pipelines include the observed data, a mask array, a variance array, a PSF model, and a WCS model.

## 4.33.3 Predecessors

## 4.33.4 Environment Needs

### 4.33.4.1 Software

### 4.33.4.2 Hardware

## 4.33.5 Input Specification

## 4.33.6 Output Specification

## 4.33.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |   |
|----------------------|---|---|
| 1-1 from<br>LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | Butler repo available for reading.  |
| 2                    | Description                                 | Ingest the data from an appropriate processed dataset.  |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |
| 3                    | Description                                 | Select a single visit from the dataset, and extract its WCS object, calexp image, psf model, and source list. |
|                      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             |   |
| 4    | Description                                 | Inspect the calexp image to ensure that <ol style="list-style-type: none"> <li>1. A well-formed image is present,</li> <li>2. The variance plane is present and well-behaved,</li> <li>3. Mask planes are present and contain information about defects.</li> </ol> |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | An astronomical image with mask and variance planes. This can be readily visualized using Firefly, which displays mask planes by default.   |
| 5    | Description                                 | Plot images of the PSF model at various points, and verify that the PSF differs with position.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A “star-like” image of the PSF evaluated at various positions. The PSF should vary slightly with position (this could be readily visualized by taking a difference of PSFs at two positions).   |
| 6    | Description                                 | Starting from the XY pixel coordinates of the sources, apply the WCS to obtain RA, Dec coordinates. Plot these positions and confirm that they match the expected values from the WCS object.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | RA, Dec coordinates that are returned should be near the central position of the visit coordinate as given in either the calexp metadata or the WCS.  |
| 7    | Description                                 | Repeat steps 2-6, but now with difference images created by the Alert Production pipeline (for example, in the ‘ap_verify’ test data processing).   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

#### 4.34 LVV-T43 - Verify implementation of Background Model Calculation

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|

### 4.36.4.1 Software

### 4.36.4.2 Hardware

## 4.36.5 Input Specification

## 4.36.6 Output Specification

## 4.36.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1                    | Description                                 | Ingest raw data from L1 Test Stand DAQ.  |
|                      | Test Data                                   | No data.   |
|                      | Expected Result                             |  |
| 2-1 from<br>LVV-T866 | Description                                 | Perform the steps of Alert Production (including, but not necessarily limited to, single frame processing, ISR, source detection/measurement, PSF estimation, photometric and astrometric calibration, difference imaging, DIASource detection/measurement, source association). During Operations, it is presumed that these are automated for a given dataset. |
|                      | Test Data                                   |  |
|                      | Expected Result                             | An output dataset including difference images and DIASource and DIAObject measurements.  |
| 2-2 from<br>LVV-T866 | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.  |
|                      | Test Data                                   |  |
|                      | Expected Result                             |  |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 3    | Description                                 | Load the Prompt Processing QC reports, and observe that a dynamically updated Data Quality Report has become available at the relevant UI.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A Prompt Processing QC report is available via a UI, and contains information about the photometric zeropoint, sky brightness, seeing, PSF, and detection efficiency, and possibly other relevant quantities. |
| 4    | Description                                 | Check that a static report is created and archived in a readily-accessible location.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Persistence of a static QC report in an accessible location, containing the same information as in the report from Step 3.  |

#### 4.37 LVV-T46 - Verify implementation of Prompt Processing Performance Report Definition

| Version | Status | Priority | Verification Type | Owner      |
|---------|--------|----------|-------------------|------------|
| 1       | Draft  | Normal   | Test              | Eric Bellm |

## 4.38.6 Output Specification

## 4.38.7 Test Procedure

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
| 1                  | Description                                 | Identify precursor and simulated calibration datasets on which to run the L1 calibration pipeline.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             |  |
| 2-1 from LVV-T1059 | Description                                 | Execute the Daily Calibration Products Update payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone. |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 2-2 from LVV-T1059 | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.  |
|                    | Test Data                                   |  |

| Step  | Description, Input Data and Expected Result |   |
|-------|---|---|
|       | Expected Result                             |   |
| <hr/> |   |   |
| 3     | Description                                 | Check that a dynamic report is created that triggers alerts if calibrations go out of range.                          |
|       | Test Data                                   | No data.  |
|       | Expected Result                             | A dynamic report is available via UI to users, and if any out-of-spec changes have occurred, alerts have been issued. |
| 4     | Description                                 | Check that a static report is created and archived in a readily-accessible location.                                  |
|       | Test Data                                   | No data.  |
|       | Expected Result                             | An archived version of the calibration report is available and will be retained in a static file format.              |

### 4.39 LVV-T48 - Verify implementation of Exposure Catalog

| Version | Status  | Priority | Verification Type | Owner     |
|---------|---------|----------|-------------------|-----------|
| 1       | Defined | Normal   | Test              | Jim Bosch |

Open LVV-T48 in Jira

#### 4.39.1 Verification Elements

- LVV-97 - DMS-REQ-0266-V-01: Exposure Catalog

#### 4.39.2 Test Items

Verify that the DMS creates an Exposure Catalog that includes

1. Observation datetime, exposure time
2. Filter
3. Dome, telescope orientation and status
4. Calibration status
5. Airmass and zenith
6. Environmental information

## 7. Per-sensor information

### 4.39.3 Predecessors

### 4.39.4 Environment Needs

#### 4.39.4.1 Software

#### 4.39.4.2 Hardware

### 4.39.5 Input Specification

### 4.39.6 Output Specification

### 4.39.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Verify that Exposure Catalogs contain the required elements. At present, the form of the exposure catalog is not defined. This information can be found for a given Butler repo from the metadata, but will ultimately be aggregated into a database/table summarizing available exposures. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A list of the required metadata for a set of exposures is returned and both human- and machine-readable.  |

## 4.40 LVV-T49 - Verify implementation of DIASource Catalog

| Version | Status | Priority | Verification Type | Owner      |
|---------|--------|----------|-------------------|------------|

|                      | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.   |
|                      | Test Data                                   |   |
|                      | Expected Result                             |   |
|                      |   |   |
| 2-1 from<br>LVV-T901 | Description                                 | Perform the steps of Moving Object Pipeline (MOPS) processing on newly detected DIASources, and generate Solar System data products including Solar System objects with associated Keplerian orbits, errors, and detected DIASources. This includes running processes to link DIASource detections within a night (called tracklets), to link these tracklets across multiple nights (into tracks), to fit the tracks with an orbital model to identify those tracks that are consistent with an asteroid orbit, to match these new orbits with existing SSObjects, and to update the SSObject table. |
|                      | Test Data                                   |   |
|                      | Expected Result                             | An output dataset consisting of an updated SSObject database with SSObjects both added and pruned as the orbital fits have been refined, and an updated DIASource database with DIASources assigned and unassigned to SSObjects.  |
|                      | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.   |
|                      | Test Data                                   |   |
|                      | Expected Result                             |   |
| 3                    | Description                                 | Computer the phase angle, reduced and absolute asteroid magnitudes for objects identified in SSObject Catalog   |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |

#### 4.53.6 Output Specification

#### 4.53.7 Test Procedure

| Step              | Description, Input Data and Expected Result |  |
|-------------------|---|--|
| 1                 | Description                                 | Identify a dataset with coadded images in multiple filters.  |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             | Multi-band data that has been processed through the coaddition stage.  |
| 2-1 from LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:   |
|                   | Test Data                                   |  |
|                   | Expected Result                             | Butler repo available for reading.   |
| 3                 | Description                                 | Load the exposures, then select Objects classified as point sources on at least 10 different coadd images (including all bands). Evaluate the PSF model at the positions of these Objects, and verify that subtracting a scaled version of the PSF model from the processed visit image yields residuals consistent with pure noise. |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             | Images with the PSF model subtracted, leaving only residuals that are consistent with being noise.   |

#### 4.54 LVV-T63 - Verify implementation of Produce Images for EPO

| Version | Status | Priority | Verification Type | Owner                   |
|---------|--------|----------|-------------------|-------------------------|
| 1       | Draft  | Normal   | Test              | Gregory Dubois-Felsmann |

Open LVV-T63 in Jira

#### 4.54.1 Verification Elements

- LVV-45 - DMS-REQ-0103-V-01: Produce Images for EPO

#### 4.54.2 Test Items

This test will verify that the DRP pipelines produce the image data products called out in LSE-131. Currently this is limited to a color all-sky HiPS map. This will be verified (1) by inspection of pipeline configurations and (2) in operations rehearsals on precursor data. The production of a usable HiPS map will be verified by browsing it with community tools.

#### 4.54.3 Predecessors

#### 4.54.4 Environment Needs

##### 4.54.4.1 Software

##### 4.54.4.2 Hardware

#### 4.54.5 Input Specification

In order for an operational test to be successful, as a precondition the inputs to that production must exist. For the only currently mandated image data production in LSE-131, a color all-sky HiPS map down to 1 arcsecond resolution, the prerequisite inputs to that are the single-filter coadds in the bands required by the yet-to-be-specified color prescription.

#### 4.54.6 Output Specification

#### 4.54.7 Test Procedure

| Step              | Description, Input Data and Expected Result |  |
|-------------------|---|--|
| 1-1 from LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following: |
|                   | Test Data                                   |  |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Expected Result                             | Butler repo available for reading.   |
| 2    | Description                                 | For each of the expected data product types needed for creation of HiPS images, retrieve the data product from the Butler and verify it to be non-empty.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | Verify that a HiPS image map covering the LSST survey area, with a limiting depth yielding 1 arcsecond resolution, has been produced matching the color prescriptions provided by EPO (in updates to LSE-131 which are expected to be made "once ComCam data is available").           |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 4    | Description                                 | Place the image map in a location accessible to a Firefly and an Aladin Lite client, ideally with the client running in the EPO data systems environment.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 5    | Description                                 | Use Firefly to manually explore the image map at the largest scales to verify coverage of the entire sky. Sample in various locations to confirm the 1 arcsecond maximum depth. Confirm using Aladin Lite that the format of the image map is supported by this common community tool. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 6    | Description                                 | Verify programmatically, perhaps both by sampling a variety of locations, and by counting the tiles created at the 1-arcsecond-resolution depth, that the map is complete and meets its specifications.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 7    | Description                                 | Apply an IVOA-community HiPS service validation tool, if available, to the service location.   |
|      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             |   |
| 8    | Description                                 | Verify that the HiPS map created is in a location accessible to the EPO data systems. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.55 LVV-T64 - Verify implementation of Coadded Image Provenance

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T64 in Jira

### 4.55.1 Verification Elements

- LVV-46 - DMS-REQ-0106-V-01: Coadded Image Provenance
- LVV-1234 - OSS-REQ-0122-V-01: Provenance

### 4.55.2 Test Items

Verify that all coadd data products produced by the DRP pipelines are associated with provenance information that includes the set of input epochs contributing to that coadd as well as any additional information needed to exactly produce that coadd.

### 4.55.3 Predecessors

### 4.55.4 Environment Needs

#### 4.55.4.1 Software

#### 4.55.4.2 Hardware

#### 4.55.5 Input Specification

#### 4.55.6 Output Specification

#### 4.55.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |   |
|----------------------|---|---|
| 1-1 from<br>LVV-T860 | Description                                 | The 'path' that you will use depends on where you are running the science pipelines. Options:   |
|                      |   | <ul style="list-style-type: none"> <li>• local (newinstall.sh - based install):[path_to_installation]/loadLSST.bash</li> <li>• development cluster ("lsst-dev"): /software/lsstsw/stack/loadLSST.bash</li> <li>• LSP Notebook aspect (from a terminal): /opt/lsst/software/stack/loadLSST.bash</li> </ul> |
|                      |   | From the command line, execute the commands below in the example code:  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | Science pipeline software is available for use. If additional packages are needed (for example, 'obs' packages such as 'obs_subaru'), then additional 'setup' commands will be necessary.   |
|                      |   | To check versions in use, type:<br>eups list -s   |
| 2-1 from<br>LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | Butler repo available for reading.  |
| 3                    | Description                                 | For each of the expected data product types and each of the expected units (PVI, coadds, etc), retrieve the data product from the Butler and verify it to be non-empty.   |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 4    | Description                                 | Query and verify provenance of input images, and software versions that went into producing stack. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 5    | Description                                 | Test re-generating 10 different coadds tract+patches based on the provenance image given           |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.56 LVV-T65 - Verify implementation of Source Catalog

| Version | Status  | Priority | Verification Type | Owner     |
|---------|---------|----------|-------------------|-----------|
| 1       | Defined | Normal   | Test              | Jim Bosch |

Open LVV-T65 in Jira

### 4.56.1 Verification Elements

- LVV-98 - DMS-REQ-0267-V-01: Source Catalog

### 4.56.2 Test Items

Verify that all Sources produced by the DRP pipelines contain the entries listed in DMS-REQ-0267.

### 4.56.3 Predecessors

### 4.56.4 Environment Needs

#### 4.56.4.1 Software

#### 4.56.4.2 Hardware

#### 4.56.5 Input Specification

#### 4.56.6 Output Specification

#### 4.56.7 Test Procedure

| Step               | Description, Input Data and Expected Result |   |
|--------------------|---|---|
| 1                  | Description                                 | Identify a suitable small dataset to process through the DRP.   |
|                    | Test Data                                   | No data.  |
|                    | Expected Result                             |   |
| 2-1 from LVV-T1064 | Description                                 | Process data with the Data Release Production payload, starting from raw science images and generating science data products, placing them in the Data Backbone.  |
|                    | Test Data                                   |   |
|                    | Expected Result                             |   |
| 3                  | Description                                 | Confirm that source catalogs have been produced for single visits and coadds, and that it contains the required measurements.   |
|                    | Test Data                                   | No data.  |
|                    | Expected Result                             | A source catalog containing the measured attributes (and associated errors), including location on the focal plane; a static point-source model fit to world coordinates and flux; a centroid and adaptive moments; and surface brightnesses through elliptical multiple apertures that are concentric, PSF-homogenized, and logarithmically spaced in intensity. |

### 4.57 LVV-T66 - Verify implementation of Forced-Source Catalog

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T66 in Jira

## 4.57.1 Verification Elements

- LVV-99 - DMS-REQ-0268-V-01: Forced-Source Catalog

## 4.57.2 Test Items

Verify that all ForcedSources produced by the DRP pipelines contain fluxes measured on difference and direct single-epoch images, associated uncertainties, an Object ID, and a Visit ID.

## 4.57.3 Predecessors

## 4.57.4 Environment Needs

### 4.57.4.1 Software

### 4.57.4.2 Hardware

## 4.57.5 Input Specification

## 4.57.6 Output Specification

## 4.57.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-1 from<br>LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following: |
|                      | Test Data                                   |  |
|                      | Expected Result                             | Butler repo available for reading.   |
| 2                    | Description                                 | Retrieve the forced-source catalog from the Butler and verify it to be non-empty.                            |
|                      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Expected Result                             |  |
| 3    | Description                                 | Verify that there exist entries in the forced-photometry table for all coadd objects for the PVIs on which the object should appear. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 4    | Description                                 | Verify that there exist entries in a forced-photometry table for each image for all DIAObjects.                                      |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.58 LVV-T67 - Verify implementation of Object Catalog

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T67 in Jira

### 4.58.1 Verification Elements

- LVV-106 - DMS-REQ-0275-V-01: Object Catalog

### 4.58.2 Test Items

Verify that the DRP pipelines produce an Object catalog derived from detections made on both coadded images and difference images and measurements performed on coadds and possibly overlapping single-epoch images.

### 4.58.3 Predecessors

### 4.58.4 Environment Needs

#### 4.58.4.1 Software

#### 4.58.4.2 Hardware

### 4.58.5 Input Specification

Input Data

DECam HiTS data (raw science images and master calibrations)

HSC “RC2” data (raw science images and master calibrations)

### 4.58.6 Output Specification

### 4.58.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | load LSST DM Stack  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Run the single-frame processing and self-calibration steps of the DRP pipeline. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 3    | Description                                 | Insert simulated sources into all single-frame images, including:   |
|      |   | <ul style="list-style-type: none"> <li>static objects (e.g. galaxies), including some too faint to be detectable in single-epoch images;</li> <li>objects with static positions that are sufficiently bright and variable that they should be detectable in single-epoch difference images;</li> <li>transient objects that appear in only a few epochs;</li> <li>stars with significant proper motions and parallaxes, some below the single-epoch detection limit</li> <li>simulated solar system objects with orbits that can be constrained from just the epochs in the test dataset</li> </ul> |
|      | Test Data                                   | No data.  |
| 4    | Expected Result                             |   |
|      | Description                                 | Run all remaining DRP pipeline steps.   |
|      | Test Data                                   | No data.  |
| 5    | Expected Result                             |   |
|      | Description                                 | Load data into DRP database   |
|      | Test Data                                   | No data.  |
| 6    | Expected Result                             |   |
|      | Description                                 | Verify that the injected simulated objects are recovered at a rate consistent with their S/N <i>when not blended with each other or real objects</i> , and that flags indicating how each Object was detected are consistent with their properties:   |
|      |   | <ul style="list-style-type: none"> <li>static objects should be detected in coadds only (not difference images)</li> <li>static-position/variable-flux objects should be detected in coadds and possibly difference images</li> <li>transient objects should be detected in difference images only</li> <li>stars with significant proper motions may be detected in either coadds or difference images</li> <li>solar system objects should be detected in difference images only.</li> </ul>  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.59 LVV-T68 - Verify implementation of Provide Photometric Redshifts of Galaxies

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T68 in Jira

### 4.59.1 Verification Elements

- LVV-19 - DMS-REQ-0046-V-01: Provide Photometric Redshifts of Galaxies

### 4.59.2 Test Items

Verify that Object catalogs produced by the DRP Pipeline include photometric redshift information.

### 4.59.3 Predecessors

### 4.59.4 Environment Needs

#### 4.59.4.1 Software

#### 4.59.4.2 Hardware

### 4.59.5 Input Specification

Input Data

HSC Public Data Release (raw science images, master calibrations)

Assorted public spectroscopic catalogs and high-accuracy photometric redshift catalogs in the HSC PDR footprint.

### 4.59.6 Output Specification

#### 4.59.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Run DRP processing steps through (at least) final galaxy photometry measurements.                         |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Train photometric redshift algorithm(s) on spectroscopic and high-accuracy photometric redshift catalogs. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Estimate photometric redshifts for all Objects generated by DRP processing.                               |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 4    | Description                                 | Load into DRP Database  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 5    | Description                                 | Inspect database to verify that photometric redshifts are present for all objects                         |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

#### 4.60 LVV-T69 - Verify implementation of Object Characterization

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T69 in Jira

#### 4.60.1 Verification Elements

- LVV-107 - DMS-REQ-0276-V-01: Object Characterization

#### 4.60.2 Test Items

Verify that Object catalogs produced by the DRP pipeline include all measurements listed in DMS-REQ-0276: a point-source model fit, a bulge-disk model fit, standard colors, a centroid, adaptive moments, Petrosian and Kron fluxes, surface brightness at multiple apertures, proper motion and parallax, and a variability characterization.

#### 4.60.3 Predecessors

#### 4.60.4 Environment Needs

##### 4.60.4.1 Software

##### 4.60.4.2 Hardware

#### 4.60.5 Input Specification

#### 4.60.6 Output Specification

#### 4.60.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Precursor data, execute DRP, load results, observe catalog contents |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.61 LVV-T71 - Verify implementation of Detecting extended low surface brightness objects

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T71 in Jira

### 4.61.1 Verification Elements

- LVV-180 - DMS-REQ-0349-V-01: Detecting extended low surface brightness objects

### 4.61.2 Test Items

Verify that low-surface brightness objects (including those whose PSF S/N is lower than the detection threshold) are detected in coadds.

### 4.61.3 Predecessors

### 4.61.4 Environment Needs

#### 4.61.4.1 Software

#### 4.61.4.2 Hardware

### 4.61.5 Input Specification

Input Data

HSC "RC2" data (raw science images and master calibrations)

### 4.61.6 Output Specification

### 4.61.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | load LSST DM Stack  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Run the single-frame processing and self-calibration steps of the DRP pipeline.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Insert simulated low-surface-brightness galaxies (with exponential profiles) consistently into all calibrated single-epoch images.                                      |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 4    | Description                                 | Run all remaining DRP pipeline steps.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 5    | Description                                 | Load data into DRP database   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 6    | Description                                 | Verify that the injected simulated objects are recovered at a rate consistent with their S/N and true profile <i>when not blended with each other or real objects</i> . |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

#### 4.62 LVV-T72 - Verify implementation of Coadd Image Method Constraints

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T72 in Jira

## 4.62.1 Verification Elements

- LVV-109 - DMS-REQ-0278-V-01: Coadd Image Method Constraints

## 4.62.2 Test Items

Verify the implementation of how Coadd images are created.

## 4.62.3 Predecessors

## 4.62.4 Environment Needs

### 4.62.4.1 Software

### 4.62.4.2 Hardware

## 4.62.5 Input Specification

## 4.62.6 Output Specification

## 4.62.7 Test Procedure

| Step              | Description, Input Data and Expected Result |  |
|-------------------|---|--|
| 1                 | Description                                 | Identify a dataset that has been processed to create coadd images.   |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |
| 2-1 from LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following: |
|                   | Test Data                                   |  |
|                   | Expected Result                             | Butler repo available for reading.   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 3    | Description                                 | Retrieve the coadds in the dataset and verify that they are non-empty. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 4    | Description                                 | Verify that coadds were created following specification                |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.63 LVV-T73 - Verify implementation of Deep Detection Coadds

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T73 in Jira

### 4.63.1 Verification Elements

- LVV-110 - DMS-REQ-0279-V-01: Deep Detection Coadds

### 4.63.2 Test Items

Verify that the DRP pipelines produce a suite of per-band coadded images that are optimized for depth.

### 4.63.3 Predecessors

### 4.63.4 Environment Needs

#### 4.63.4.1 Software

#### 4.63.4.2 Hardware

#### 4.63.5 Input Specification

#### 4.63.6 Output Specification

#### 4.63.7 Test Procedure

| Step              | Description, Input Data and Expected Result |  |
|-------------------|---|--|
| 1-1 from LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:             |
|                   | Test Data                                   |  |
|                   | Expected Result                             | Butler repo available for reading.   |
| 2                 | Description                                 | Verify through inspection that per-filter coadds exist for each tract+patch possible                                     |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |
| 3                 | Description                                 | Verify through inspection that the images used to generate those coadds met specified conditions                         |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |
| 4                 | Description                                 | Visually inspect a subset of the coadds to verify that they visually appear reasonable and to be from good quality data. |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |

#### 4.64 LVV-T74 - Verify implementation of Template Coadds

| Version | Status | Priority | Verification Type | Owner      |

### 4.65.1 Verification Elements

- LVV-112 - DMS-REQ-0281-V-01: Multi-band Coadds

### 4.65.2 Test Items

Verify that the DRP pipelines produce multi-band coadds for detection purposes.

### 4.65.3 Predecessors

### 4.65.4 Environment Needs

#### 4.65.4.1 Software

#### 4.65.4.2 Hardware

## 4.65.5 Input Specification

## 4.65.6 Output Specification

## 4.65.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-1 from<br>LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following: |
|                      | Test Data                                   |  |
|                      | Expected Result                             | Butler repo available for reading.   |
| 2                    | Description                                 | Verify that deep detection coadds exist based on all filters.  |
|                      | Test Data                                   | No data.   |
|                      | Expected Result                             |  |

## 4.66 LVV-T76 - Verify implementation of All-Sky Visualization of Data Releases

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Simon Krughoff |

Open LVV-T76 in Jira

### 4.66.1 Verification Elements

- LVV-160 - DMS-REQ-0329-V-01: All-Sky Visualization of Data Releases

### 4.66.2 Test Items

Show that it's possible to produce large area visualizations from Data Release data products.

## 4.66.3 Predecessors

## 4.66.4 Environment Needs

### 4.66.4.1 Software

### 4.66.4.2 Hardware

## 4.66.5 Input Specification

### Input Data

Dataset of perhaps ~100 square degrees. The first HSC Public Data Release will be used for this test. Larger (in sky area) datasets should be identified for further testing.

## 4.66.6 Output Specification

## 4.66.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-1 from<br>LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:   |
|                      | Test Data                                   |  |
|                      | Expected Result                             | Butler repo available for reading.   |
| 2                    | Description                                 | Run all sky tile generation task to produce the data products necessary for serving the all sky visualization. |
|                      | Test Data                                   | No data.   |
|                      | Expected Result                             |  |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 3    | Description                                 | Manually perform, and log (including timing where applicable), the following steps against that all sky visualization application. At all steps take special care to note any missing or un-rendered image tiles:   |
|      |   | <ol style="list-style-type: none"> <li>1. Navigate to the all sky viewer and log the URL, browser and version.</li> <li>2. Zoom to native pixel display (1 image pixel per display pixel)</li> <li>3. Zoom to fit the full PDR footprint</li> <li>4. Zoom to 1/4x native resolution</li> <li>5. Pan to eastern edge of the footprint.</li> <li>6. Pan to western edge of the footprint.</li> <li>7. Navigate to the middle of the footprint.</li> <li>8. Zoom to max magnification</li> </ol> |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

#### 4.67 LVV-T77 - Verify implementation of Best Seeing Coadds

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|

Open LVV-T80 in Jira

#### 4.70.1 Verification Elements

- LVV-168 - DMS-REQ-0337-V-01: Detecting faint variable objects

#### 4.70.2 Test Items

To verify that the Data Release Production pipeline will be able to detect faint sources with long-term variability (e.g., quasars, proper motion stars) via, e.g., shorter timescale coadds (month to a few months).

#### 4.70.3 Predecessors

#### 4.70.4 Environment Needs

##### 4.70.4.1 Software

##### 4.70.4.2 Hardware

#### 4.70.5 Input Specification

Input Data such as:

DECam HiTS data.

Gaia catalog of faint moving objects.

Catalog of spectroscopically confirmed quasars.

(Alternative: input data injected with faint variable sources).

#### 4.70.6 Output Specification

#### 4.70.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-1 from<br>LVV-T866 | Description                                 | Perform the steps of Alert Production (including, but not necessarily limited to, single frame processing, ISR, source detection/measurement, PSF estimation, photometric and astrometric calibration, difference imaging, DIASource detection/measurement, source association). During Operations, it is presumed that these are automated for a given dataset. |

| 3                    | Description                                 | Identify 100 objects from Gaia with proper motions high enough to have detectably moved during HSC observations.   |
|                      | Test Data                                   | No data.   |
|                      | Expected Result                             |  |
| 4                    | Description                                 | Measure reported proper motion of these objects in DM Stack processing. Verify that it is consistent with Gaia objects.  |
|                      | Test Data                                   | No data.   |
|                      | Expected Result                             |  |
| 5                    | Description                                 | Identify 100 quasars from color-space or existing extragalactic spectroscopic catalog.   |
|                      | Test Data                                   | No data.   |
|                      | Expected Result                             |  |
| 6                    | Description                                 | Measure lightcurves of these quasars. Determine if structure function is reasonable (may require at least a year to determine if the structure function of 100 quasars is "reasonable").   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 7    | Test Data                                   | No data.  |
|      | Expected Result                             |   |
|      | Description                                 | (Alternative: if faint variable source can be injected into the input data, test to see if they are recovered).   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | (This Alternative would enable us not only to tell if faint variable objects are detected, but exactly which kinds, how faint, and with what efficiency.) |

## 4.71 LVV-T81 - Verify implementation of Targeted Coadds

| Version | Status | Priority | Verification Type | Owner     |
|---------|--------|----------|-------------------|-----------|
| 1       | Draft  | Normal   | Test              | Jim Bosch |

Open LVV-T81 in Jira

### 4.71.1 Verification Elements

- LVV-169 - DMS-REQ-0338-V-01: Targeted Coadds

### 4.71.2 Test Items

Verify that small sections of any coadd produced by the DRP pipelines can be retained, even if the full coadd is not.

### 4.71.3 Predecessors

### 4.71.4 Environment Needs

#### 4.71.4.1 Software

#### 4.71.4.2 Hardware

#### 4.71.5 Input Specification

#### 4.71.6 Output Specification

#### 4.71.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Remove DR from disk   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Observe retention of designated coadd sections                                    |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Observe accessibility of designated coadd sections via simulated DAC LSP instance |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

#### 4.72 LVV-T82 - Verify implementation of Tracking Characterization Changes Between Data Releases

| Version | Status  | Priority | Verification Type | Owner     |
|---------|---------|----------|-------------------|-----------|
| 1       | Defined | Normal   | Test              | Jim Bosch |

Open LVV-T82 in Jira

#### 4.72.1 Verification Elements

- LVV-170 - DMS-REQ-0339-V-01: Tracking Characterization Changes Between Data Releases

#### 4.72.2 Test Items

Verify that small-area subsets of a DR can be retained when most of that DR is retired, for comparison with future DRs.

#### 4.72.3 Predecessors

#### 4.72.4 Environment Needs

##### 4.72.4.1 Software

##### 4.72.4.2 Hardware

#### 4.72.5 Input Specification

#### 4.72.6 Output Specification

#### 4.72.7 Test Procedure

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
| 1                  | Description                                 | Prepare a second DRP run -> DPDD with different configuration parameters for this second test Data Release.  |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             |  |
| 2-1 from LVV-T1064 | Description                                 | Process data with the Data Release Production payload, starting from raw science images and generating science data products, placing them in the Data Backbone. |
|                    | Test Data                                   |  |

| Step  | Description, Input Data and Expected Result |   |
|-------|---|---|
|       | Expected Result                             |   |
| <hr/> |   |   |
| 3     | Description                                 | Stage subset of products from first test Data Release to separate storage.  |
|       | Test Data                                   | No data.  |
|       | Expected Result                             |   |
| 4     | Description                                 | Scientifically compare the results of the subset of that region of sky to those in the second test Data Release comparing the results of the DRP Scientific Verification tests. |
|       | Test Data                                   | No data.  |
|       | Expected Result                             | Diagnostic plots quantifying the differences between scientific outputs between the first and second test datasets.   |

### 4.73 LVV-T83 - Verify implementation of Bad Pixel Map

| Version | Status  | Priority | Verification Type | Owner         |
|---------|---------|----------|-------------------|---------------|
| 1       | Defined | Normal   | Test              | Robert Lupton |

Open LVV-T83 in Jira

#### 4.73.1 Verification Elements

- LVV-22 - DMS-REQ-0059-V-01: Bad Pixel Map

#### 4.73.2 Test Items

Verify that the DMS can produce a map of detector pixels that suffer from pathologies, and that these pathologies are encoded in at least 32-bit values.

#### 4.73.3 Predecessors

#### 4.73.4 Environment Needs

##### 4.73.4.1 Software

##### 4.73.4.2 Hardware

#### 4.73.5 Input Specification

#### 4.73.6 Output Specification

#### 4.73.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Interrogate the calibRegistry for the metadata associated with a bad pixel map, where the validity range contains the date of interest.             |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A bad pixel map for the requested date has been returned.   |
| 2    | Description                                 | Check that the bad pixel pathologies are encoded as at least 32-bit values, and that the various pathologies are represented by different encoding. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Bad pixel values can be decoded to determine their pathologies using their 32-bit values.   |

#### 4.74 LVV-T84 - Verify implementation of Bias Residual Image

| Version | Status  | Priority | Verification Type | Owner         |
|---------|---------|----------|-------------------|---------------|
| 1       | Defined | Normal   | Test              | Robert Lupton |

Open LVV-T84 in Jira

#### 4.74.1 Verification Elements

- LVV-23 - DMS-REQ-0060-V-01: Bias Residual Image

#### 4.74.2 Test Items

Verify that DMS can construct a bias residual image that corrects for temporally-stable bias structures.

Verify that DMS can do this on demand.

#### 4.74.3 Predecessors

#### 4.74.4 Environment Needs

##### 4.74.4.1 Software

##### 4.74.4.2 Hardware

#### 4.74.5 Input Specification

#### 4.74.6 Output Specification

#### 4.74.7 Test Procedure

| Step              | Description, Input Data and Expected Result |  |
|-------------------|---|--|
| 1                 | Description                                 | Identify the location of an appropriate precursor dataset.   |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |
| 2-1 from LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following: |
|                   | Test Data                                   |  |
|                   | Expected Result                             | Butler repo available for reading.   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 3    | Description                                 | Import the standard libraries required for the rest of this test:  |
|      | Test Data                                   | No data.   |
|      | Example Code                                | <pre>import os import lsst.afw.display as afwDisplay from lsst.daf.persistence import Butler from lsst.ip.isr import IsrTask from firefly_client import FireflyClient from lpython.display import IFrame</pre>   |
|      | Expected Result                             |  |
| 4    | Description                                 | Ingest the dataset from step 1 using the Butler (e.g., following example code below).  |
|      | Test Data                                   | No data.   |
|      | Example Code                                | <pre>butler = Butler(\$REPOSITORY_PATH) raw = butler.get("raw", visit=\$VISIT_ID, detector=2) bias = butler.get("bias", visit=\$VISIT_ID, detector=2)</pre>  |
|      | Expected Result                             |  |
| 5    | Description                                 | Display the bias image and inspect that its pixels contain unique values.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | A relatively flat image showing the bias level with roughly Poisson noise.   |
| 6    | Description                                 | Configure and run an Instrument Signature Removal (ISR) task on the raw data. Most corrections are disabled for simplicity, but the bias frame is applied.   |
|      | Test Data                                   | No data.   |
|      | Example Code                                | <pre>isr_config = IsrTask.ConfigClass() isr_config.doDark=False isr_config.doFlat=False isr_config.doFringe=False isr_config.doDefect=False isr_config.doAddDistortionModel=False isr_config.doLinearize=False isr = IsrTask(config=isr_config) result = isr.run(raw, bias=bias)</pre> |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 7    | Expected Result                             | A trimmed, bias-corrected image in 'result'.   |
|      | Description                                 | Display the 'result' image and confirm that the bias correction has been performed.                      |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | A displayed image with bias removed (i.e., typical background counts reduced relative to the raw frame). |

## 4.75 LVV-T85 - Verify implementation of Crosstalk Correction Matrix

| Version | Status  | Priority | Verification Type | Owner         |
|---------|---------|----------|-------------------|---------------|
| 1       | Defined | Normal   | Test              | Robert Lupton |

Open LVV-T85 in Jira

### 4.75.1 Verification Elements

- LVV-24 - DMS-REQ-0061-V-01: Crosstalk Correction Matrix

### 4.75.2 Test Items

Verify that the DMS can generate a cross-talk correction matrix from appropriate calibration data.

Verify that the DMS can measure the effectiveness of the cross-talk correction matrix.

### 4.75.3 Predecessors

### 4.75.4 Environment Needs

#### 4.75.4.1 Software

#### 4.75.4.2 Hardware

#### 4.75.5 Input Specification

#### 4.75.6 Output Specification

#### 4.75.7 Test Procedure

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
| 1                  | Description                                 | Identify an appropriate calibration dataset that can be used to derive the crosstalk correction matrix.  |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             |  |
| 2-1 from LVV-T1060 | Description                                 | Execute the Calibration Products Production payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone. |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 2-2 from LVV-T1060 | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.  |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 3                  | Description                                 | Confirm that the crosstalk correction matrix is produced and persisted.  |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | A correction matrix quantifying what fraction of the signal detected in any given amplifier on each sensor in the focal plane appears in any other amplifier.  |
| 4                  | Description                                 | Apply the crosstalk correction to simulated images, and confirm that the correction is performing as expected.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | A noticeable difference between images before and after applying the correction.   |

### 4.76 LVV-T86 - Verify implementation of Illumination Correction Frame

| Version | Status | Priority | Verification Type | Owner         |
|---------|--------|----------|-------------------|---------------|
| 1       | Draft  | Normal   | Test              | Robert Lupton |

Open LVV-T86 in Jira

#### 4.76.1 Verification Elements

- LVV-25 - DMS-REQ-0062-V-01: Illumination Correction Frame

#### 4.76.2 Test Items

Verify that the DMS can produce an illumination correction frame calibration product.  
Verify that the DMS can determine the effectiveness of an illumination correction and determine how often it should be updated.

#### 4.76.3 Predecessors

#### 4.76.4 Environment Needs

##### 4.76.4.1 Software

#### 4.78.6 Output Specification

#### 4.78.7 Test Procedure

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
| 1                  | Description                                 | Identify a suitable set of calibration frames, including biases, dark frames, and flat-field frames.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             |  |
| 2-1 from LVV-T1060 | Description                                 | Execute the Calibration Products Production payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone. |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 2-2 from LVV-T1060 | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.  |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 3                  | Description                                 | Confirm that the expected data products are created, and that they have the expected properties.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | A full set of calibration data products has been created, and they are well-formed.  |
| 4                  | Description                                 | Test that the calibration products are archived, and can readily be applied to science data to produce the desired corrections.  |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | Confirmation that application of the calibration products to processed data has the desired effects.   |

## 4.79 LVV-T89 - Verify implementation of Calibration Image Provenance

| Version | Status  | Priority | Verification Type | Owner         |
|---------|---------|----------|-------------------|---------------|
| 1       | Defined | Normal   | Test              | Robert Lupton |

### 4.79.7 Test Procedure

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
| 1                  | Description                                 | Ingest an appropriate precursor calibration dataset into a Butler repo.  |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             |  |
| 2-1 from LVV-T1060 | Description                                 | Execute the Calibration Products Production payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone. |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 2-2 from LVV-T1060 | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.  |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 3                  | Description                                 | Load the relevant database/Butler data product, and observe that all provenance information has been retained.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | A dataset consisting of calibration images, with provenance information recorded and properly associated with the calibration images.  |

## 4.80 LVV-T90 - Verify implementation of Dark Current Correction Frame

| Version | Status  | Priority | Verification Type | Owner         |
|---------|---------|----------|-------------------|---------------|
| 1       | Defined | Normal   | Test              | Robert Lupton |

Open LVV-T90 in Jira

### 4.80.1 Verification Elements

- LVV-113 - DMS-REQ-0282-V-01: Dark Current Correction Frame Creation

## 4.80.2 Test Items

Verify that the DMS can produce a dark correction frame calibration product.

## 4.80.3 Predecessors

## 4.80.4 Environment Needs

### 4.80.4.1 Software

### 4.80.4.2 Hardware

## 4.80.5 Input Specification

## 4.80.6 Output Specification

## 4.80.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Identify the path to a dataset containing dark frames (i.e., exposures taken with the shutter closed).  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Execute the relevant steps from 'cp_pipe' (the calibration pipeline) to produce dark correction frames. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Inspect the resulting dark correction frame to confirm that it appears as expected.                     |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A well-formed dark correction frame is present and accessible via the Data Butler.                      |

## 4.81 LVV-T91 - Verify implementation of Fringe Correction Frame

| Version | Status | Priority | Verification Type | Owner         |
|---------|--------|----------|-------------------|---------------|
| 1       | Draft  | Normal   | Test              | Robert Lupton |

Open LVV-T91 in Jira

### 4.81.1 Verification Elements

- LVV-114 - DMS-REQ-0283-V-01: Fringe Correction Frame

### 4.81.2 Test Items

Verify that the DMS can produce an fringe-correction frame calibration product.  
Verify that the DMS can determine the effectiveness of the fringe-correction frame and determine how often it should be updated.

### 4.81.3 Predecessors

### 4.81.4 Environment Needs

#### 4.81.4.1 Software

#### 4.81.4.2 Hardware

### 4.81.5 Input Specification

### 4.81.6 Output Specification

### 4.81.7 Test Procedure

| Step | Description, Input Data and Expected Result |                 |
|------|---|-----------------|
| 1    | Description                                 | Delegate to CPP |
|      | Test Data                                   | No data.        |
|      | Expected Result                             |                 |

## 4.82 LVV-T92 - Verify implementation of Processing of Data From Special Programs

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Melissa Graham |

Open LVV-T92 in Jira

### 4.82.1 Verification Elements

- LVV-151 - DMS-REQ-0320-V-01: Processing of Data From Special Programs

### 4.82.2 Test Items

For a simulated night of observing that includes some special program observations, show that the SP observations are reduced using their designated reconfigured pipelines (i.e., that the image metadata is sufficient to trigger the processing and include all other relevant images in the processing).

### 4.82.3 Predecessors

### 4.82.4 Environment Needs

#### 4.82.4.1 Software

#### 4.82.4.2 Hardware

#### 4.82.5 Input Specification

A variety of imaging data from Special Programs, including these scenarios:

- (1) Special Programs data that can be processed by the Prompt pipeline (i.e., standard visits)
- (2) Special Programs data that requires 'real-time' (~24) processing with a reconfigured pipeline (e.g., DDF imaging sequence)
- (3) Special Programs data that can (should) be processed by the Data Release pipeline (e.g., North Ecliptic Spur standard visits)

#### 4.82.6 Output Specification

#### 4.82.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | (1) Special Programs data that can be processed by the Prompt pipeline (i.e., standard visits).<br>Check that all images with the header keyword for SP were processed by the Prompt pipeline. Check that the Prompt pipeline's data products – DIASource, DIAObject catalogs and the Alerts – contain items flagged with their origin as that SP. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | (2) Special Programs data that requires 'real-time' (~24) processing with a reconfigured pipeline (e.g., DDF imaging sequence)<br>Check that all images with the header keywords for a given SP were processed by their reconfigured pipeline. Check that the pipeline's data products have been updated, and passed their QA.                     |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | (3) Special Programs data that can (should) be processed by the Data Release pipeline (e.g., North Ecliptic Spur standard visits).<br>SP data would be added manually to the DRP processing. Check that the DRP's data products – Source, Object, CoAdds – contain items flagged as originating in that SP.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.83 LVV-T93 - Verify implementation of Level 1 Processing of Special Programs Data

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Melissa Graham |

Open LVV-T93 in Jira

### 4.83.1 Verification Elements

- LVV-152 - DMS-REQ-0321-V-01: Level 1 Processing of Special Programs Data

### 4.83.2 Test Items

Execute multi-day operations rehearsal. Observe whether Prompt Processing data products generated in time and confirm whether processing has completed before the start of the next simulated night.

### 4.83.3 Predecessors

### 4.83.4 Environment Needs

#### 4.83.4.1 Software

#### 4.83.4.2 Hardware

### 4.83.5 Input Specification

Imaging data obtained under a Special Program: for example, a sequence of consecutive images of a deep drilling field.

### 4.83.6 Output Specification

#### 4.83.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | If imaging data for a Special Program that requires processing with the Prompt pipeline was obtained the previous night, check that there exist DIASources/Objects/Alerts with flags that they originated from the Special Program. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | If imaging data for a Special Program that requires prompt processing with a reconfigured pipeline was obtained the previous night, check that the relevant data products have been updated.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

### 4.84 LVV-T94 - Verify implementation of Special Programs Database

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Melissa Graham |

Open LVV-T94 in Jira

#### 4.84.1 Verification Elements

- LVV-153 - DMS-REQ-0322-V-01: Special Programs Database

#### 4.84.2 Test Items

To confirm that data products from Special Programs are based solely on images obtained as part of SP via, e.g., metadata queries. To confirm that the SP data products can be joined to Prompt and DRP products by attempting to do so via, e.g., coordinate table joins, and attempting to e.g., find the faint counterparts in a Deep Drilling stack to variables with no Object detections in the DRP coadds.

### 4.84.3 Predecessors

### 4.84.4 Environment Needs

#### 4.84.4.1 Software

#### 4.84.4.2 Hardware

### 4.84.5 Input Specification

Databases created by reconfigured pipelines for processing Special Programs data (e.g., DIAObject/DIASource catalogs for a Deep Drilling Field).

### 4.84.6 Output Specification

### 4.84.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | SP data product: DDF DIAObjects catalog<br>Non-SP data product: WFD DIAObjects catalog<br>Test: join the two catalogs by coordinate (e.g., to get a longer time baseline for variable stars in the DDF) |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | SP data product: DDF Objects catalog<br>Non-SP data product: WFD DIAObjects catalog<br>Test: join the two catalogs by coordinate to identify faint host galaxies of transients found in WFD             |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.85 LVV-T95 - Verify implementation of Constraints on Level 1 Special Program Products Generation

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Melissa Graham |

Open LVV-T95 in Jira

### 4.85.1 Verification Elements

- LVV-175 - DMS-REQ-0004-V-01: Time to L1 public release
- LVV-1276 - OSS-REQ-0127-V-01: Level 1 Data Product Availability

### 4.85.2 Test Items

Execute single-day operations rehearsal. Observe Prompt Processing data products generated in time. Confirm that data from Special Programs is processed with the same latency as required for main survey data: release of public data within L1publicT and Alerts within OTT1.

### 4.85.3 Predecessors

### 4.85.4 Environment Needs

#### 4.85.4.1 Software

#### 4.85.4.2 Hardware

### 4.85.5 Input Specification

Data from a Special Program that is appropriate for the Prompt pipeline (i.e., a Deep Drilling type series of standard visits from a non-crowded field).

## 4.85.6 Output Specification

## 4.85.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-1 from<br>LVV-T866 | Description                                 | Perform the steps of Alert Production (including, but not necessarily limited to, single frame processing, ISR, source detection/measurement, PSF estimation, photometric and astrometric calibration, difference imaging, DIASource detection/measurement, source association). During Operations, it is presumed that these are automated for a given dataset. |
|                      | Test Data                                   |  |
|                      | Expected Result                             | An output dataset including difference images and DIASource and DIAObject measurements.  |
| 1-2 from<br>LVV-T866 | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.  |
|                      | Test Data                                   |  |
|                      | Expected Result                             |  |
| 2                    | Description                                 | Confirm that Special Program prompt data products have been generated within 24 hours.   |
|                      | Test Data                                   | No data.   |
|                      | Expected Result                             |  |

## 4.86 LVV-T96 - Verify implementation of Query Repeatability

| Version | Status | Priority | Verification Type | Owner        |
|---------|--------|----------|-------------------|--------------|
| 1       | Draft  | Normal   | Test              | Colin Slater |

Open LVV-T96 in Jira

### 4.86.1 Verification Elements

- LVV-122 - DMS-REQ-0291-V-01: Query Repeatability

## 4.86.2 Test Items

Verify that prior queries can be rerun with identical results, or with new additional data for live (Alert Production) databases.

## 4.86.3 Predecessors

## 4.86.4 Environment Needs

### 4.86.4.1 Software

### 4.86.4.2 Hardware

## 4.86.5 Input Specification

## 4.86.6 Output Specification

## 4.86.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Select and download (deterministic) random subsample of records from Data Release Object and Source tables.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Select and download random subsample of PPDB DIAObject and DIASource tables.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | As appropriate, wait for some amount of non-trivial database usage to occur, such as Prompt Processing ingestion or ingestion of other DRP database tables. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 4    | Description                                 | Re-run the queries in steps 1 and 2 and verify that the resulting data are identical. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
|      |   |   |

## 4.87 LVV-T97 - Verify implementation of Uniqueness of IDs Across Data Releases

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|

### 4.87.1 Verification Elements

- LVV-123 - DMS-REQ-0292-V-01: Uniqueness of IDs Across Data Releases

### 4.87.2 Test Items

Verify that the IDs of Objects, Sources, DIAObjects, and DIASources from different Data Releases are unique.

### 4.87.3 Predecessors

### 4.87.4 Environment Needs

#### 4.87.4.1 Software

#### 4.87.4.2 Hardware

### 4.87.5 Input Specification

### 4.87.6 Output Specification

### 4.87.7 Test Procedure

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
| 1                  | Description                                 | Identify an appropriate precursor dataset to be processed through Data Release Production.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             |  |
| 2-1 from LVV-T1064 | Description                                 | Process data with the Data Release Production payload, starting from raw science images and generating science data products, placing them in the Data Backbone. |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 3-1 from LVV-T987  | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:   |
|                    | Test Data                                   |  |
|                    | Expected Result                             | Butler repo available for reading.   |
| 4                  | Description                                 | After running the DRP payload multiple times, load the resulting data products (both data release and prompt products) using the Butler.                         |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | Multiple datasets resulting from processing of the same input data.  |
| 5                  | Description                                 | Inspect the IDs in the multiple data products and confirm that all IDs are unique.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | No IDs are repeated between multiple processings of the identical input dataset.   |

## 4.88 LVV-T98 - Verify implementation of Selection of Datasets

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Kian-Tat Lim |

Open LVV-T98 in Jira

#### 4.88.1 Verification Elements

- LVV-124 - DMS-REQ-0293-V-01: Selection of Datasets

#### 4.88.2 Test Items

Verify that the DMS can identify and retrieve datasets consisting of logical groupings of Exposures, metadata, provenance, etc., or other groupings that are processed or produced as a logical unit.

### 4.97.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Ingest raw data while simulating failures and outages, observe eventual recovery |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.98 LVV-T108 - Verify implementation of Level 1 Source Association

| Version | Status | Priority | Verification Type | Owner      |
|---------|--------|----------|-------------------|------------|
| 1       | Draft  | Normal   | Test              | Eric Bellm |

Open LVV-T108 in Jira

### 4.98.1 Verification Elements

- LVV-116 - DMS-REQ-0285-V-01: Level 1 Source Association

#### 4.98.2 Test Items

Verify that the DMS associates DIASources into a DIAObject or SSObject.

#### 4.98.3 Predecessors

#### 4.98.4 Environment Needs

##### 4.98.4.1 Software

##### 4.98.4.2 Hardware

#### 4.98.5 Input Specification

#### 4.98.6 Output Specification

#### 4.98.7 Test Procedure

| Step | Description, Input Data and Expected Result |                |
|------|---|----------------|
| 1    | Description                                 | Delegate to AP |
|      | Test Data                                   | No data.       |
|      | Expected Result                             |                |

### 4.99 LVV-T109 - Verify implementation of SSObject Precovery

| Version | Status | Priority | Verification Type | Owner      |
|---------|--------|----------|-------------------|------------|
| 1       | Draft  | Normal   | Test              | Eric Bellm |

Open LVV-T109 in Jira

#### 4.99.1 Verification Elements

- LVV-117 - DMS-REQ-0286-V-01: SSObject Precovery

#### 4.99.2 Test Items

Verify that the DMS associates additional DIAObjects (both forward and back in time) with objects classified as SSObjects.

#### 4.99.3 Predecessors

#### 4.99.4 Environment Needs

##### 4.99.4.1 Software

##### 4.99.4.2 Hardware

#### 4.99.5 Input Specification

#### 4.99.6 Output Specification

#### 4.99.7 Test Procedure

| Step | Description, Input Data and Expected Result |                |
|------|---|----------------|
| 1    | Description                                 | Delegate to AP |
|      | Test Data                                   | No data.       |
|      | Expected Result                             |                |

### 4.100 LVV-T110 - Verify implementation of DIASource Precovery

| Version | Status | Priority | Verification Type | Owner |
|---------|--------|----------|-------------------|-------|
|---------|--------|----------|-------------------|-------|

1      Draft      Normal      Test      Eric Bellm

### 4.101.1 Verification Elements

- LVV-119 - DMS-REQ-0288-V-01: Use of External Orbit Catalogs

### 4.101.2 Test Items

Verify that the DMS can make use of external catalogs to improve identification of SSObjects.

### 4.101.3 Predecessors

### 4.101.4 Environment Needs

#### 4.101.4.1 Software

#### 4.101.4.2 Hardware

### 4.101.5 Input Specification

### 4.101.6 Output Specification

### 4.101.7 Test Procedure

| Step | Description, Input Data and Expected Result |                |
|------|---|----------------|
| 1    | Description                                 | Delegate to AP |
|      | Test Data                                   | No data.       |

| Step | Description, Input Data and Expected Result |
|------|---|
|      | Expected Result                             |

## 4.102 LVV-T112 - Verify implementation of Alert Filtering Service

| Version | Status  | Priority | Verification Type | Owner      |
|---------|---------|----------|-------------------|------------|
| 1       | Defined | Normal   | Test              | Eric Bellm |

Open LVV-T112 in Jira

### 4.102.1 Verification Elements

- LVV-173 - DMS-REQ-0342-V-01: Alert Filtering Service

### 4.102.2 Test Items

Verify that user-defined filters can be used to generate a basic alert filtering service.

### 4.102.3 Predecessors

### 4.102.4 Environment Needs

#### 4.102.4.1 Software

#### 4.102.4.2 Hardware

### 4.102.5 Input Specification

### 4.102.6 Output Specification

### 4.102.7 Test Procedure

| Step              | Description, Input Data and Expected Result |  |
|-------------------|---|--|
| 1                 | Description                                 | Identify a suitable precursor dataset for processing through the Alert Production pipeline.  |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             |  |
| 2-1 from LVV-T866 | Description                                 | Perform the steps of Alert Production (including, but not necessarily limited to, single frame processing, ISR, source detection/measurement, PSF estimation, photometric and astrometric calibration, difference imaging, DIASource detection/measurement, source association). During Operations, it is presumed that these are automated for a given dataset. |
|                   | Test Data                                   |  |
|                   | Expected Result                             | An output dataset including difference images and DIASource and DIAObject measurements.  |
| 2-2 from LVV-T866 | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.  |
|                   | Test Data                                   |  |
|                   | Expected Result                             |  |
| 3                 | Description                                 | Confirm that alerts are generated, and that an Alert Distribution service is making them available via a stream.   |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             | Via either a UI or API, confirmation that a stream of alerts are available.  |
| 4                 | Description                                 | Confirm that a UI (or API) exists that allows users to define simple filters. Define a filter, and observe both the full and the filtered alert streams to confirm that the filter has reduced the volume of alerts.   |
|                   | Test Data                                   | No data.   |
|                   | Expected Result                             | The user-defined filter has reduced the number of alerts being received relative to the full stream.   |

#### 4.103 LVV-T113 - Verify implementation of Performance Requirements for LSST Alert Filtering Service

| Version | Status  | Priority | Verification Type | Owner      |
|---------|---------|----------|-------------------|------------|
| 1       | Defined | Normal   | Test              | Eric Bellm |

Open LVV-T113 in Jira

#### 4.103.1 Verification Elements

- LVV-174 - DMS-REQ-0343-V-01: Number of full-size alerts

#### 4.103.2 Test Items

Verify that the DMS alert filter service provides sufficient bandwidth for **numBrokerUsers = 100** simultaneously-operating brokers to receive up to **numBrokerAlerts = 20** alerts per visit.

#### 4.103.3 Predecessors

#### 4.103.4 Environment Needs

##### 4.103.4.1 Software

##### 4.103.4.2 Hardware

#### 4.103.5 Input Specification

#### 4.103.6 Output Specification

#### 4.103.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Create a simulated alert stream.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Simultaneously execute user-defined alert filters for at least <b>numBrokerUsers = 100</b> users, and confirm that the system successfully filters the stream as requested. Confirm that the bandwidth requirement of <b>numBrokerAlerts = 20</b> per user was met. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | All of the (simulated) users successfully receive their requested filtered alerts, with <b>numBrokerAlerts = 20</b> per user.   |

| Step | Description, Input Data and Expected Result |
|------|---|
|------|---|

#### 4.104 LVV-T114 - Verify implementation of Pre-defined alert filters

| Version | Status  | Priority | Verification Type | Owner      |
|---------|---------|----------|-------------------|------------|
| 1       | Defined | Normal   | Test              | Eric Bellm |

Open LVV-T114 in Jira

##### 4.104.1 Verification Elements

- LVV-179 - DMS-REQ-0348-V-01: Pre-defined alert filters

##### 4.104.2 Test Items

Verify that users of the Alert Filtering service can use a predefined set of filters.

##### 4.104.3 Predecessors

##### 4.104.4 Environment Needs

##### 4.104.4.1 Software

##### 4.104.4.2 Hardware

##### 4.104.5 Input Specification

##### 4.104.6 Output Specification

##### 4.104.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Create a simulated alert stream. Confirm that alerts are generated, and that an Alert Distribution service is making them available. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | A stream of alerts that is confirmed to be generated and distributed.  |
| 2    | Description                                 | Confirm that a UI (or API) exists that presents users some pre-defined filters.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | The UI (or API) for accessing alert streams has some pre-defined filters available for users.  |
| 3    | Description                                 | Select one of the pre-defined filters, and confirm that the results have been properly filtered.                                     |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | After applying the pre-defined filter, the number of alerts has decreased relative to the raw stream.                                |

## 4.105 LVV-T115 - Verify implementation of Calibration Production Processing

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Kian-Tat Lim |

Open LVV-T115 in Jira

### 4.105.1 Verification Elements

- LVV-120 - DMS-REQ-0289-V-01: Calibration Production Processing

### 4.105.2 Test Items

Execute CPP on a variety of representative cadences, and verify that the calibration pipeline correctly produces necessary calibration products.

### 4.105.3 Predecessors

#### 4.105.4 Environment Needs

##### 4.105.4.1 Software

##### 4.105.4.2 Hardware

#### 4.105.5 Input Specification

#### 4.105.6 Output Specification

#### 4.105.7 Test Procedure

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
| 1                  | Description                                 | Identify a suitable set of calibration frames, including biases, dark frames, and flat-field frames.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             |  |
| 2-1 from LVV-T1060 | Description                                 | Execute the Calibration Products Production payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone. |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 2-2 from LVV-T1060 | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.  |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 3                  | Description                                 | Confirm that the expected data products are created, and that they have the expected properties.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | Repos containing valid calibration products that are well-formed and ready to be applied to processed datasets.  |

## 4.106 LVV-T116 - Verify implementation of Associating Objects across data releases

| Version | Status | Priority | Verification Type | Owner        |
|---------|--------|----------|-------------------|--------------|

#### 4.107.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Create a test user account for the Science Platform.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Set the LSP resource allocations for the test user to very low values.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Initiate example batch jobs and notebook sessions that will exceed the specified resource limits.               |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Quota error.  |
| 4    | Description                                 | Transfer sufficient data volumes into the user workspace and MyDB tables that would exceed the resource quotas. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Quota error.  |
| 5    | Description                                 | Reset the user resource quotas to normal values.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 6    | Description                                 | Initiate the same example batch jobs and notebook sessions that previously caused an error.                     |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Successful notebook and batch job execution.  |
| 7    | Description                                 | Transfer the same data volumes into the user workspace and MyDB tables that previously caused an error.         |

| Step | Description, Input Data and Expected Result |                           |
|------|---|---------------------------|
|      | Test Data                                   | No data.                  |
|      | Expected Result                             | Successful data transfer. |

#### 4.114.4.2 Hardware

### 4.114.5 Input Specification

### 4.114.6 Output Specification

### 4.114.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |   |
|----------------------|---|---|
| 1-1 from<br>LVV-T860 | Description                                 | <p>The 'path' that you will use depends on where you are running the science pipelines. Options:</p> <ul style="list-style-type: none"> <li>• local (newinstall.sh - based install): [path_to_installation]/loadLSST.bash</li> <li>• development cluster ("lsst-dev"): /software/lsstsw/stack/loadLSST.bash</li> <li>• LSP Notebook aspect (from a terminal): /opt/lsst/software/stack/loadLSST.bash</li> </ul> <p>From the command line, execute the commands below in the example code:</p> |
|                      | Test Data                                   |   |
|                      | Expected Result                             | <p>Science pipeline software is available for use. If additional packages are needed (for example, 'obs' packages such as 'obs_subaru'), then additional 'setup' commands will be necessary.</p> <p>To check versions in use, type:</p> <pre>eups list -s</pre>   |

| Step                 | Description, Input Data and Expected Result |   |
|----------------------|---|---|
| 2                    | Description                                 | Using curated test datasets for multiple precursor instruments, verify and log that the prototype DRP pipelines execute successfully in three contexts:<br>1. The CI system<br>2. On a single user system: laptop, desktop, or notebook running in the Notebook aspect of the LSP.<br>3. Project workflow system.   |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |
| 3                    | Description                                 | Using a template testing notebook in the Notebook aspect of the LSP, verify and log the following:<br>1. Individual pipeline steps (tasks) are importable and executable on their own. this is not comprehensive, but demonstrative.<br>2. Individual pipeline steps may be overridden by configuration.<br>3. Users can implement a custom pipeline step and insert it into the processing flow via configuration. |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |
| 4-1 from<br>LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | Butler repo available for reading.  |
| 5                    | Description                                 | Read the resulting dataset using the Butler, and confirm that it produced the desired data products.  |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |
| 6                    | Description                                 | Run subset of full DRP from previous step on an individual node. Was this organizationally easy? Did the performance scale appropriately?   |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |
| 7                    | Description                                 | Re-run aperture correction on subset. Verify that same results as DRP run are achieved.   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 8    | Test Data                                   | No data.   |
|      | Expected Result                             |  |
|      | Description                                 | Re-run photometric redshift estimation algorithm on subset coadd catalogs. Verify that same results are achieved as from full DRP. |
| 8    | Test Data                                   | No data.   |
|      | Expected Result                             |  |

### 4.117 LVV-T127 - Verify implementation of Provide Source Detection Software

| Version | Status  | Priority | Verification Type | Owner         |
|---------|---------|----------|-------------------|---------------|
| 1       | Defined | Normal   | Test              | Robert Lupton |

Open LVV-T127 in Jira

#### 4.117.1 Verification Elements

- LVV-15 - DMS-REQ-0033-V-01: Provide Source Detection Software

#### 4.117.2 Test Items

Verify that the DMS provides source detection software that can be applied to calibrated images, including both difference images and coadds. This will be verified using simulated data, but could also be done by inserting artificial sources into existing datasets.

#### 4.117.3 Predecessors

#### 4.117.4 Environment Needs

##### 4.117.4.1 Software

##### 4.117.4.2 Hardware

#### 4.117.5 Input Specification

#### 4.117.6 Output Specification

#### 4.117.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Run DRP and AP processing, including source detection and measurement algorithms, on a small portion of the data from a simulated dataset.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Source catalogs containing measurements of all sources detected in the input images.   |
| 2    | Description                                 | Confirm that the output repos contain catalogs of source detections. Compare these output catalogs to the original simulated source catalogs, and confirm that a large fraction of the sources within a reasonable signal-to-noise range were recovered. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Most sources above a reasonable S/N threshold were detected, and their measured fluxes are reasonably close to the simulated inputs.   |

| Open LVV-T131 in Jira |         |        |      |                         |

#### 4.121.1 Verification Elements

- LVV-63 - DMS-REQ-0160-V-01: Provide User Interface Services

#### 4.121.2 Test Items

Verify the availability and functionality of the broad range of user interface services called for in the requirement, as applied to both Nightly and DRP data. This will primarily be done by verifications performed at the LSST Science Platform level, based on the requirements in LDM-554; however, a high-level set of tests corresponding to the DMS-REQ-0160 requirement are defined below.

#### 4.121.3 Predecessors

#### 4.121.4 Environment Needs

##### 4.121.4.1 Software

**4.121.4.2 Hardware** As noted in Verification Configuration, the systems required to carry out the tests include both an “inside” test execution platform - the ability to execute test notebooks within the Science Platform Notebook Aspect - and an “outside” test execution platform with connectivity to the Science Platform instance under test that is comparable to that available to offsite science users.

#### 4.121.5 Input Specification

1. Testing this requirement relies on a set of data products meeting the data model implied by the DPDD existing in a deployment of the Science Platform and its underlying database and file services.

- (a) In particular, both image and catalog data products are required.
  - (b) From the specific language of the underlying requirement, it appears clear that coadded data products are required, but in practice single-epoch data products should be included in the test as well.
2. Depending on when this requirement is tested, the tests may involve either or both of precursor data and LSST commissioning data. The use of the latter is ultimately essential to ensure that the tests are performed with as LSST-like a dataset as possible.

#### 4.121.6 Output Specification

#### 4.121.7 Test Procedure

| Step | Description, Input Data and Expected Result  |
|------|--|
| 1    | <b>Description</b> <b>Establishment of test coordinates:</b><br>Establish sky positions and surrounding regions (e.g., cones or polygons), field sizes, filter bands, and temporal epochs for the tests that are consistent with the known content of the test dataset, whether precursor or LSST commissioning data.<br>Establishing sky positions should include pre-determining the corresponding LSST “tract and patch” identifiers.<br>If the plan to not keep all calibrated single-epoch images on disk is still in place at the time of the test, identify for use in the test both images that are, and are not, on disk.<br>Establish target image boundaries, projections, and pixel scales to be used for resampling tests. Ensure that at least some of these test conditions include coadded image boundaries that cross tract and patch boundaries, and single-epoch image boundaries that cross focal plane raft boundaries. |
|      | <b>Test Data</b> No data.  |
|      | <b>Expected Result</b>   |
| 2    | <b>Description</b> <b>Butler image access:</b><br>From within the Notebook Aspect, verify that coadded images for the identified regions of sky and filter bands are accessible via the Butler. Verify that the same images are available whether obtained by direct reference to the previous established tract/patch identifiers or by the use of LSST stack code for retrieving images based on sky coordinates.<br>From within the Notebook Aspect, verify that single-epoch raw images for the selected locations and times are available. Verify that calibrated images (PVI) for the selected locations and times are available; depending on the details of the test dataset, verify that PVI still on disk can be retrieved immediately.<br>Verify that lists or tables of image metadata, not just individual images, can be retrieved. E.g., a list of all the single-epoch images covering a selected sky location.              |

| Step | Description, Input Data and Expected Result  |          |
|------|--|----------|
|      | Test Data  | No data. |
|      | Expected Result  |          |
| 3    | Description <b>Programmatic PVI re-creation:</b><br>From within the Notebook Aspect, verify that the recreation on demand of a PVI can be performed. Ideally, this should be done as follows: <ul style="list-style-type: none"> <li>• Verify that recreation of a PVI that <i>is</i> still available works and that it reproduces the original PVI exactly (except for provenance metadata that must be different) or within the reasonable ability of processing systems to do so (e.g., taking into account that the original calibration and the recreation may have run on different CPU architectures).</li> <li>• The test conditions should ensure the verification that a recreation was actually performed, i.e., that the still-available PVI was not returned instead.</li> <li>• Note that it does not appear to be a requirement that <i>at Butler level</i> recreation on demand of PVIs is a completely transparent process. If this <i>is</i> decided to be a requirement, the test must also verify that it has been satisfied. If it is <i>not</i> a requirement, verify that adequate documentation on the PVI-recreation process (e.g., the SuperTasks and configuration to be used) is available.</li> </ul> |          |
|      | Test Data  | No data. |
|      | Expected Result  |          |
| 4    | Description <b>Butler catalog access:</b><br>From within the Notebook Aspect, verify that all the catalog data products described in the DPDD can be retrieved for the coordinates selected above via the Butler. (This test should include access to SObject data, but the details of how such a test would depend on the coordinate selections require additional thought.)  |          |
|      | Test Data  | No data. |
|      | Expected Result  |          |
| 5    | Description <b>LSST-stack-based resampling/reprojection:</b><br>Verify the availability of software in the LSST stack, and associated documentation, that permits the resampling of LSST images to different pixel grids and projections. Exercise this capability for the test conditions selected in Step 1 above. Perform photometric and astrometric tests on the resulting resampled images to provide evidence that the transformations performed were correct to the accuracy supported by the data.  |          |
|      | Test Data  | No data. |

| Step | Description, Input Data and Expected Result   |          |
|------|---|----------|
|      | Expected Result   |          |
| 6    | <b>Description</b><br><b>Comment:</b><br>The following API Aspect test steps should be carried out on the required “offsite-like” test platform, to ensure that their success does not reflect any privileged access given to processes inside the Data Access Center or other Science Platform instance. However, at least a small sampling of them should <i>also</i> be carried out <i>within</i> the Science Platform environment, i.e., in the Notebook Aspect, and the results compared.  |          |
|      | Test Data   | No data. |
|      | Expected Result   |          |
| 7    | <b>Description</b><br><b>API Aspect image access:</b><br>Using IVOA services such as the Registry and ObsTAP, from the “offsite-like” test platform, verify that the existence of the classes of image data products foreseen in the DPDD can be determined.<br>Verify that ObsTAP and/or SIAv2 can be used to find the same images and lists of images for the established test coordinates that were retrieved via the Butler in Step 2 above.<br>Verify that the selected images are retrievable from the Web services.<br>Verify that the retrieved images are identical in their pixel content and metadata.<br>The tests must include both coadded and single-epoch images. |          |
|      | Test Data   | No data. |
|      | Expected Result   |          |
| 8    | <b>Description</b><br><b>API Aspect image transformations:</b><br>Verify that image cutouts and resamplings can be performed via the IVOA SODA service, and that the results are identical to those obtained for the same parameters from the LSST-stack-based tests in Step 5.<br>(The requirements for supported reprojections, if any, in the SODA service have not been established at the time of writing.)  |          |
|      | Test Data   | No data. |
|      | Expected Result   |          |
| 9    | <b>Description</b><br><b>API Aspect catalog data access:</b><br>Verify that the IVOA Registry, RegTAP, TAP_SCHEMA, and other relevant mechanisms can be used to discover the existence of all the catalog data products foreseen in the DPDD. Using the IVOA TAP service, verify that all the catalog data products foreseen in the DPDD can be retrieved for the coordinates determined in Step 1. Verify that their scientific content is the same as when they are retrieved via the Butler.   |          |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 10   | Description                                 | <b>Comment:</b><br>The Portal Aspect tests below should be carried out from a web browser on an “offsite-like” test platform, to ensure that no privileged access provided to intra-data-center clients is relied upon.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 11   | Description                                 | <b>Portal Aspect data browsing:</b><br>Verify that the Portal Aspect can be used to discover the existence of all the data products foreseen in the DPDD. Verify that the UI permits locating the data for the coordinates selected in Step 1 by visual means, e.g., by zooming and panning in from an all-sky view. Verify that the UI permits locating the data by typing in coordinates as well.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 12   | Description                                 | <b>Portal Aspect image access:</b><br>Verify that the Portal Aspect allows both the retrieval of “original” image data, i.e., in its native LSST pixel projection and with full metadata, as well as retrieval of on-demand UI cutouts of coadded image data for selected locations.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 13   | Description                                 | <b>Portal Aspect catalog query and visualization:</b><br>Verify that the Portal Aspect allows graphical querying of DPDD catalog data, both coadded and single-epoch, for selected regions of sky and/or with selected properties, and supports the visualization of the results (including histogramming, scatterplots, time series, table manipulations, and overplotting on image data).<br>(Note that the Science Platform requirements, LDM-554, lay out a detailed set of requirements on the selection and visualization of catalog data.) |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 14   | Description                                 | <b>Portal Aspect data download:</b><br>Verify that data identified and/or visualized in the Portal Aspect can be downloaded to the remote system running the web browser in which the Portal is displayed, as well as to the User Workspace. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.122 LVV-T132 - Verify implementation of Pre-cursor and Real Data

| Version               | Status   | Priority | Verification Type | Owner          |
|-----------------------|----------|----------|-------------------|----------------|
| 1                     | Approved | Normal   | Test              | Robert Gruendl |
| Open LVV-T132 in Jira |          |          |                   |                |

### 4.122.1 Verification Elements

- LVV-127 - DMS-REQ-0296-V-01: Pre-cursor, and Real Data

### 4.122.2 Test Items

Demonstrate that pixel-oriented data from astronomical imaging cameras (precursor or otherwise) can be processed using LSST Science Algorithms and organized for access through the Data Butler Access Client.

### 4.122.3 Predecessors

### 4.122.4 Environment Needs

#### 4.122.4.1 Software

#### 4.122.4.2 Hardware

#### 4.122.5 Input Specification

#### 4.122.6 Output Specification

#### 4.122.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Confirm that the CI jobs used to test DRP processing successfully run. These jobs use precursor datasets from cameras other than LSST. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | For the precursor dataset, instantiate the Butler, load the data products, and confirm that they exist as expected.                    |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Processed images, catalogs, calibration information, and other related data products are present and accessible via the Butler.        |

### 4.123 LVV-T133 - Verify implementation of Provide Beam Projector Coordinate Calculation Software

| Version | Status  | Priority | Verification Type | Owner         |

Open LVV-T134 in Jira

#### 4.124.1 Verification Elements

- LVV-27 - DMS-REQ-0065-V-01: Provide Image Access Services

#### 4.124.2 Test Items

Verify that images can be identified and that images and image cut-outs can be retrieved using the network interfaces - primarily IVOA standards-based - and Python APIs provided for image access by science users.

#### 4.124.3 Predecessors

#### 4.124.4 Environment Needs

##### 4.124.4.1 Software

##### 4.124.4.2 Hardware

#### 4.124.5 Input Specification

Testing requires the establishment of running services such as SIAv2 and SODA to which the tests can be applied.

#### 4.124.6 Output Specification

#### 4.124.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Inspect that the following test cases have been executed and passed: LVV-T803, LVV-T810, LVV-T811, LVV-T812. |
|      |   | The requirement is fully satisfied by lower-level LSP test cases.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Test cases LVV-T803, LVV-T810, LVV-T811, LVV-T812 passed without blocking issues.                            |

## 4.125 LVV-T136 - Verify implementation of Data Product and Raw Data Access

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Colin Slater |

Open LVV-T136 in Jira

### 4.125.1 Verification Elements

- LVV-129 - DMS-REQ-0298-V-01: Data Product and Raw Data Access

### 4.125.2 Test Items

Verify that available image, file, and catalog data products, and their metadata and provenance information, can be listed and retrieved.

### 4.125.3 Predecessors

### 4.125.4 Environment Needs

#### 4.125.4.1 Software

#### 4.125.4.2 Hardware

#### 4.125.5 Input Specification

#### 4.125.6 Output Specification

#### 4.125.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Details of the Gen3 Butler and ObsTAP tables are still being worked out. The general overview of this test will be to use some combination of the Gen3 Butler and TAP access to the ObsTAP tables to test that the required access is provided. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Verification that the relevant data products and their related tables, metadata, and provenance information are available and readily accessible.   |

### 4.126 LVV-T137 - Verify implementation of Data Product Ingest

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Colin Slater |

Open LVV-T137 in Jira

#### 4.126.1 Verification Elements

- LVV-130 - DMS-REQ-0299-V-01: Data Product Ingest

#### 4.126.2 Test Items

Verify that data products can be ingested.

#### 4.126.3 Predecessors

#### 4.126.4 Environment Needs

##### 4.126.4.1 Software

#### 4.126.4.2 Hardware

#### 4.126.5 Input Specification

#### 4.126.6 Output Specification

#### 4.126.7 Test Procedure

| Step               | Description, Input Data and Expected Result |  |
|--------------------|---|--|
| 1                  | Description                                 | Identify a suitable set of raw data to be run through “mini-DRP” processing.   |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             |  |
| 2-1 from LVV-T1064 | Description                                 | Process data with the Data Release Production payload, starting from raw science images and generating science data products, placing them in the Data Backbone. |
|                    | Test Data                                   |  |
|                    | Expected Result                             |  |
| 3-1 from LVV-T987  | Description                                 | Identify the path to the data repository, which we will refer to as ‘DATA/path’, then execute the following:   |
|                    | Test Data                                   |  |
|                    | Expected Result                             | Butler repo available for reading.   |
| 4                  | Description                                 | Confirm that the data products from the DRP processing have been ingested into the Data Backbone.  |
|                    | Test Data                                   | No data.   |
|                    | Expected Result                             | Processed images, catalogs, calibration information, and other related data products are present and accessible via the Butler.                                  |

### 4.127 LVV-T138 - Verify implementation of Bulk Download Service

| Version | Status | Priority | Verification Type | Owner |
|---------|--------|----------|-------------------|-------|
|---------|--------|----------|-------------------|-------|

|   |       |        |      |                |
|---|-------|--------|------|----------------|
| 1 | Draft | Normal | Test | Robert Gruendl |
|---|-------|--------|------|----------------|

---

Open LVV-T138 in Jira

#### 4.127.1 Verification Elements

- LVV-131 - DMS-REQ-0300-V-01: Bulk Download Service

#### 4.127.2 Test Items

Bulk Download

#### 4.127.3 Predecessors

#### 4.127.4 Environment Needs

##### 4.127.4.1 Software

##### 4.127.4.2 Hardware

#### 4.127.5 Input Specification

A large dataset (at least a few TB) must be available.

Requires identity management to confirm bulk download use.

While this can be tested and shown to work using LSST DAC, Chilean DAC, and IN2P3 endpoints, this should also be tested to demonstrate expected throughput for outside users (e.g. FNAL, NERSC sites could be tested).

#### 4.127.6 Output Specification

#### 4.127.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Setup large transfer request and examine the data transfer rates achieved.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Test should be repeated while observing in firehose mode (with LSSTCam) during science verification to ensure that bulk transfer does not compromise normal nightly operations. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.128 LVV-T140 - Verify implementation of Production Orchestration

| Version | Status  | Priority | Verification Type | Owner          |
|---------|---------|----------|-------------------|----------------|
| 1       | Defined | Normal   | Test              | Robert Gruendl |

Open LVV-T140 in Jira

### 4.128.1 Verification Elements

- LVV-133 - DMS-REQ-0302-V-01: Production Orchestration

### 4.128.2 Test Items

Demonstrate use to orchestration software to perform real-time and batch production on LSST compute platform(s).

### 4.128.3 Predecessors

### 4.128.4 Environment Needs

#### 4.128.4.1 Software

#### 4.128.4.2 Hardware

#### 4.128.5 Input Specification

#### 4.128.6 Output Specification

#### 4.128.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Identify an appropriate precursor dataset.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | Execute a batch processing job using the orchestration system, and confirm (manually and/or via QA tools typically used for HSC reprocessing) that the pipeline executed and produced all expected products (or error logs in cases of failure). |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Calexp single-visit and coadd images, and associated catalogs, are present in a Butler repository. Logs of the processing are available to be inspected for identification of problems in the processing.  |

### 4.129 LVV-T141 - Verify implementation of Production Monitoring

| Version | Status  | Priority | Verification Type | Owner          |
|---------|---------|----------|-------------------|----------------|
| 1       | Defined | Normal   | Test              | Robert Gruendl |

Open LVV-T141 in Jira

#### 4.129.1 Verification Elements

- LVV-134 - DMS-REQ-0303-V-01: Production Monitoring

#### 4.129.2 Test Items

Demonstrate monitoring capabilities that give real-time view of pipeline execution and production systems usage/load.

#### 4.129.3 Predecessors

LVV-T140

#### 4.129.4 Environment Needs

##### 4.129.4.1 Software

##### 4.129.4.2 Hardware

#### 4.129.5 Input Specification

Data set and mechanism for Production Orchestration as outlined in LVV-T140.

#### 4.129.6 Output Specification

#### 4.129.7 Test Procedure

| Step                      | Description, Input Data and Expected Result |  |
|---------------------------|---|--|
| 1-1 from<br>LVV-<br>T1064 | Description                                 | Process data with the Data Release Production payload, starting from raw science images and generating science data products, placing them in the Data Backbone. |
|                           | Test Data                                   |  |
|                           | Expected                                    |  |
|                           | Result                                      |  |
| 2                         | Description                                 | While DRP processing is executing, monitor the progress and resource usage of processing.  |
|                           | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             | Ability to monitor in real-time the orchestrated production processing, including resource usage. |

## 4.130 LVV-T142 - Verify implementation of Production Fault Tolerance

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T142 in Jira

### 4.130.1 Verification Elements

- LVV-135 - DMS-REQ-0304-V-01: Production Fault Tolerance

### 4.130.2 Test Items

Demonstrate production systems report faults in pipeline executions and that system is able to recover. Where recovery can mean the ability to provide production artifacts for examination, return production elements ready for subsequent use, and/or reset and repeat production attempts.

### 4.130.3 Predecessors

### 4.130.4 Environment Needs

#### 4.130.4.1 Software

#### 4.130.4.2 Hardware

### 4.130.5 Input Specification

#### 4.130.6 Output Specification

#### 4.130.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Execute AP and DRP, simulate failures, observe correct processing |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
|      |   |   |

### 4.131 LVV-T144 - Verify implementation of Task Specification

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Kian-Tat Lim |

Open LVV-T144 in Jira

#### 4.131.1 Verification Elements

- LVV-136 - DMS-REQ-0305-V-01: Task Specification

#### 4.131.2 Test Items

Verify that the DMS provides the ability to define a new or modified pipeline task without recompilation.

#### 4.131.3 Predecessors

#### 4.131.4 Environment Needs

##### 4.131.4.1 Software

#### 4.131.4.2 Hardware

#### 4.131.5 Input Specification

#### 4.131.6 Output Specification

#### 4.131.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Inspect software architecture. Verify that there exist Tasks that can be run and configured without re-compilation.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Confirmation that the software architecture has allowed for reconfiguring and running Tasks without recompilation.   |
| 2    | Description                                 | Verify that an example science algorithm can be run through one of these Tasks. Three examples from different areas: source measurement, image subtraction, and photometric-redshift estimation. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Successful Task execution with different configurations, including confirmation that the outputs are different from tasks with altered configurations.   |

### 4.132 LVV-T145 - Verify implementation of Task Configuration

| Version | Status  | Priority | Verification Type | Owner         |
|---------|---------|----------|-------------------|---------------|
| 1       | Defined | Normal   | Test              | Robert Lupton |

Open LVV-T145 in Jira

#### 4.132.1 Verification Elements

- LVV-137 - DMS-REQ-0306-V-01: Task Configuration

## 4.132.2 Test Items

Verify that the DMS software provides configuration control to define, override, and verify the configuration for a DMS Task.

## 4.132.3 Predecessors

## 4.132.4 Environment Needs

### 4.132.4.1 Software

### 4.132.4.2 Hardware

## 4.132.5 Input Specification

## 4.132.6 Output Specification

## 4.132.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Inspect software design to verify that one can define the configuration for a Task.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Run a Task with a known invalid configuration. Verify that the error is caught before the science algorithm executes.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Run a simple task with two different configurations that make a material difference for a Task. E.g., specify a different source detection threshold. Verify that the configuration is different between the two runs through difference in recorded provenance and in results. |
|      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |
|------|---|
|      | Expected Result                             |

### 4.133 LVV-T146 - Verify implementation of DMS Initialization Component

| Version | Status  | Priority | Verification Type | Owner          |
|---------|---------|----------|-------------------|----------------|
| 1       | Defined | Normal   | Test              | Robert Gruendl |

Open LVV-T146 in Jira

#### 4.133.1 Verification Elements

- LVV-128 - DMS-REQ-0297-V-01: DMS Initialization Component

#### 4.133.2 Test Items

Demonstrate that the DMS can be initialized in a safe state that will not allow data corruption/loss.

#### 4.133.3 Predecessors

#### 4.133.4 Environment Needs

##### 4.133.4.1 Software

##### 4.133.4.2 Hardware

#### 4.133.5 Input Specification

#### 4.133.6 Output Specification

#### 4.133.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Power-cycle all of the DM systems at each Facility.                                   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Restart of all DM systems.  |
| 2    | Description                                 | Observe each system and ensure that it has recovered in a properly initialized state. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Systems are all active and initialized for their designated purpose.                  |

#### 4.134 LVV-T147 - Verify implementation of Control of Level-1 Production

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T147 in Jira

##### 4.134.1 Verification Elements

- LVV-132 - DMS-REQ-0301-V-01: Control of Level-1 Production

##### 4.134.2 Test Items

Demonstrate that the DMS can control all Prompt Processing across DMS facilities.

##### 4.134.3 Predecessors

##### 4.134.4 Environment Needs

##### 4.134.4.1 Software

#### 4.134.4.2 Hardware

#### 4.134.5 Input Specification

#### 4.134.6 Output Specification

#### 4.134.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Observe existence and capability of Prompt DMCS |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

### 4.135 LVV-T148 - Verify implementation of Unique Processing Coverage

| Version | Status | Priority | Verification Type | Owner        |
|---------|--------|----------|-------------------|--------------|
| 1       | Draft  | Normal   | Test              | Colin Slater |

#### 4.135.1 Verification Elements

- LVV-138 - DMS-REQ-0307-V-01: Unique Processing Coverage

#### 4.135.2 Test Items

Verify that a user-specified criterion can be used to process each record in a table exactly once.

#### 4.135.3 Predecessors

#### 4.135.4 Environment Needs

##### 4.135.4.1 Software

##### 4.135.4.2 Hardware

#### 4.135.5 Input Specification

#### 4.135.6 Output Specification

#### 4.135.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Execute representative processing, observe lack of duplicates or missing rows even in the presence of failures |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

#### 4.136 LVV-T149 - Verify implementation of Catalog Queries

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Colin Slater |

Open LVV-T149 in Jira

##### 4.136.1 Verification Elements

- LVV-33 - DMS-REQ-0075-V-01: Catalog Queries

##### 4.136.2 Test Items

Verify that SQL, or a similar structured language, can be used to query catalogs.

### 4.136.3 Predecessors

### 4.136.4 Environment Needs

#### 4.136.4.1 Software

#### 4.136.4.2 Hardware

### 4.136.5 Input Specification

An operational QSERV database that has been verified via LVV-T1085 and LVV-T1086 and LVV-T1087.

### 4.136.6 Output Specification

### 4.136.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Execute a simple query (for example, the one below) and confirm that it returns the expected result.   |
|      | Test Data                                   | No data.   |
|      | Example Code                                | SELECT * FROM Object WHERE qserv_areaspec_box(316.582327, -6.839078, 316.653938, -6.781822)  |
|      | Expected Result                             | A catalog of objects satisfying the specified constraints.   |
| 2    | Description                                 | Repeat the query from all available access routes (e.g., an external VO client, internal DM tools on the development cluster, the Science Platform query tool, and from within the Notebook Aspect), confirming in each case that the results are as expected. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

## 4.137 LVV-T150 - Verify implementation of Maintain Archive Publicly Accessible

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Colin Slater |

Open LVV-T150 in Jira

### 4.137.1 Verification Elements

- LVV-34 - DMS-REQ-0077-V-01: Maintain Archive Publicly Accessible

### 4.137.2 Test Items

Verify that prior data releases remain accessible.

### 4.137.3 Predecessors

### 4.137.4 Environment Needs

#### 4.137.4.1 Software

#### 4.137.4.2 Hardware

### 4.137.5 Input Specification

Availability of at least three (3) data releases, of which at least one of them must be archived outside the QSERV database. These can be precursor datasets, if needed.

### 4.137.6 Output Specification

### 4.137.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Confirm that at least two data releases (the most recent, and one previous) are accessible to users (and can be queried) from the standard channels.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Simple queries return catalog data from the data releases that are available in QSERV.  |
| 2    | Description                                 | Confirm that previous data releases are accessible for bulk download (perhaps with significant latency) from tape or other bulk store, and that the downloaded tables contain the expected data products. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A download of an entire previous data release from its bulk store.  |

#### 4.138 LVV-T151 - Verify Implementation of Catalog Export Formats From the Notebook Aspect

| Version | Status  | Priority | Verification Type | Owner        |
|---------|---------|----------|-------------------|--------------|
| 1       | Defined | Normal   | Test              | Colin Slater |

Open LVV-T151 in Jira

##### 4.138.1 Verification Elements

- LVV-35 - DMS-REQ-0078-V-01: Catalog Export Formats

##### 4.138.2 Test Items

Verify that catalog data is exportable from the notebook aspect in a variety of community-standard formats.

##### 4.138.3 Predecessors

#### 4.138.4 Environment Needs

##### 4.138.4.1 Software

##### 4.138.4.2 Hardware

#### 4.138.5 Input Specification

#### 4.138.6 Output Specification

#### 4.138.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |   |
|----------------------|---|---|
| 1-1 from<br>LVV-T837 | Description                                 | Authenticate to the notebook aspect of the LSST Science Platform (NB-LSP). This is currently at <a href="https://lsst-lsp-stable.ncsa.illinois.edu/nb">https://lsst-lsp-stable.ncsa.illinois.edu/nb</a> . |
|                      | Test Data                                   |   |
|                      | Expected Result                             | Redirection to the spawner page of the NB-LSP allowing selection of the containerized stack version and machine flavor.   |
| 1-2 from<br>LVV-T837 | Description                                 | Spawn a container by:<br>1) choosing an appropriate stack version: e.g. the latest weekly.<br>2) choosing an appropriate machine flavor: e.g. medium<br>3) click "Spawn"                                  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | Redirection to the JupyterLab environment served from the chosen container containing the correct stack version.  |
| 2-1 from<br>LVV-T838 | Description                                 | Open a new launcher by navigating in the top menu bar "File" -> "New Launcher"  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | A launcher window with several sections, potentially with several kernel versions for each.   |
| 2-2 from<br>LVV-T838 | Description                                 | Select the option under "Notebook" labeled "LSST" by clicking on the icon.  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | An empty notebook with a single empty cell. The kernel show up as "LSST" in the top right of the notebook.  |

| Step                     | Description, Input Data and Expected Result |   |
|--------------------------|---|---|
| 3-1 from<br>LW-<br>T1207 | Description                                 | Execute a query in a notebook to select a small number of stars. In the example code below, we query the WISE catalog, then extract the results to an Astropy table.  |
|                          | Test Data                                   |   |
|                          | Expected Result                             |   |
|                          |   |   |
| 4                        | Description                                 | Using the example code below, save the files to your storage space on the LSP Notebook Aspect.  |
|                          |   | Confirm that non-empty output files appear on disk.   |
|                          | Test Data                                   | No data.  |
|                          | Example Code                                | <pre>tab.write('test.csv', format='ascii.csv') tab.write('test.vot', format='votable') tab.write('test.fits', format='fits')</pre>  |
|                          | Expected Result                             | For the example given here, there should be the following files with the file size as listed: <ul style="list-style-type: none"> <li>• test.csv 5.7M</li> <li>• test.vot 16M</li> <li>• test.fits 4.5M</li> </ul>   |
| 5                        | Description                                 | Check that these files contain the same number of rows:   |
|                          | Test Data                                   | No data.  |
|                          | Example Code                                | <pre>from astropy.table import Table dat_csv = Table.read('test.csv', format='ascii.csv') dat_vot = Table.read('test.vot', format='votable') dat_fits = Table.read('test.fits', format='fits')  import numpy as np print(np.size(dat_csv), np.size(dat_vot), np.size(dat_fits))</pre> |
|                          | Expected Result                             | Print statement produces output "97058 97058 97058".  |
| 6-1 from<br>LW-<br>T1208 | Description                                 | Under the 'File' menu at the top of your Jupyter notebook session, select one of the following: <ul style="list-style-type: none"> <li>• Save All, Exit, and Log Out</li> <li>• Exit and Log Out Without Saving</li> </ul>  |
|                          |   |   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Test Data                                   |   |
|      | Expected Result                             | You will be returned to the LSP landing page: <a href="https://lsst-lsp-stable.ncsa.illinois.edu/">https://lsst-lsp-stable.ncsa.illinois.edu/</a> It is now safe to close the browser window. |

## 4.139 LVV-T152 - Verify implementation of Keep Historical Alert Archive

| Version | Status | Priority | Verification Type | Owner      |
|---------|--------|----------|-------------------|------------|
| 1       | Draft  | Normal   | Test              | Eric Bellm |

Open LVV-T152 in Jira

### 4.139.1 Verification Elements

- LVV-37 - DMS-REQ-0094-V-01: Keep Historical Alert Archive

### 4.139.2 Test Items

Verify that the DMS preserves and makes accessible an Alert Archive for reference and for false alert analyses

### 4.139.3 Predecessors

### 4.139.4 Environment Needs

#### 4.139.4.1 Software

#### 4.139.4.2 Hardware

### 4.139.5 Input Specification

#### 4.139.6 Output Specification

#### 4.139.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Simulated alert stream, load Alert DB, observe access to Alert DB |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
|      |   |   |

### 4.140 LVV-T153 - Verify implementation of Provide Engineering and Facility Database Archive

| Version | Status  | Priority | Verification Type | Owner          |
|---------|---------|----------|-------------------|----------------|
| 1       | Defined | Normal   | Test              | Robert Gruendl |

Open LVV-T153 in Jira

#### 4.140.1 Verification Elements

- LVV-44 - DMS-REQ-0102-V-01: Provide Engineering & Facility Database Archive

#### 4.140.2 Test Items

Demonstrate Engineering and Facilities Data (images, associated metadata, and observatory environment and control data) are archived and available for public access within **L1PublicT (24 hours)**.

#### 4.140.3 Predecessors

#### 4.140.4 Environment Needs

##### 4.140.4.1 Software

#### 4.140.4.2 Hardware

#### 4.140.5 Input Specification

#### 4.140.6 Output Specification

#### 4.140.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Execute a single-day operations rehearsal, ingesting (simulated) OCS commands into the EFD.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Wait at least <b>L1PublicT=24</b> hours, then access the archived EFD. Confirm that the data products are present in the archived EFD after <b>L1PublicT=24</b> hours have elapsed. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | The EFD contains the simulated OCS commands, and they were ingested within <b>L1PublicT=24</b> hours of the operations rehearsal.   |
| 3    | Description                                 | From the public access portal to the EFD, execute a query and demonstrate that the data are publicly available.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A query at the public interface to the EFD successfully executes and returns EFD data.  |

### 4.141 LVV-T154 - Verify implementation of Raw Data Archiving Reliability

| Version | Status | Priority | Verification Type | Owner        |
|---------|--------|----------|-------------------|--------------|
| 1       | Draft  | Normal   | Test              | Colin Slater |

Open LVV-T154 in Jira

#### 4.141.1 Verification Elements

- LVV-140 - DMS-REQ-0309-V-01: Raw Data Archiving Reliability

#### 4.141.2 Test Items

Verify that raw images are reliably archived.

#### 4.141.3 Predecessors

#### 4.141.4 Environment Needs

##### 4.141.4.1 Software

##### 4.141.4.2 Hardware

#### 4.141.5 Input Specification

#### 4.141.6 Output Specification

#### 4.141.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Analyze sources of loss or corruption after mitigation to compute estimated reliability |
|      | Test Data                                   | No data.  |
|      | Expected                                    |   |
|      | Result                                      |   |

### 4.142 LVV-T155 - Verify implementation of Un-Archived Data Product Cache

| Version | Status | Priority | Verification Type | Owner |
|---------|--------|----------|-------------------|-------|
|---------|--------|----------|-------------------|-------|

1      Draft      Normal      Test      Robert Gruendl

---

## 4.142.1 Verification Elements

- LVV-141 - DMS-REQ-0310-V-01: Un-Archived Data Product Cache

## 4.142.2 Test Items

Demonstrate that the DMS provides low-latency storage for at least 11 CacheLifetime (30 days) to keep prompt processing pre-covery images on hand.

## 4.142.3 Predecessors

## 4.142.4 Environment Needs

### 4.142.4.1 Software

### 4.142.4.2 Hardware

## 4.142.5 Input Specification

## 4.142.6 Output Specification

## 4.142.7 Test Procedure

| Step | Description, Input Data and Expected Result |                 |
|------|---|-----------------|
| 1    | Description                                 | Delegate to DBB |
|      | Test Data                                   | No data.        |
|      | Expected                                    |                 |
|      | Result                                      |                 |

## 4.143 LVV-T156 - Verify implementation of Regenerate Un-archived Data Products

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Simon Krughoff |

Open LVV-T156 in Jira

### 4.143.1 Verification Elements

- LVV-142 - DMS-REQ-0311-V-01: Regenerate Un-archived Data Products

### 4.143.2 Test Items

Not all of the ancillary data products produced by a data release will be archived permanently. These ancillary products have been promised as accessible to the community. Show that these products can be produced from an archived data release after the fact.

### 4.143.3 Predecessors

### 4.143.4 Environment Needs

#### 4.143.4.1 Software

#### 4.143.4.2 Hardware

### 4.143.5 Input Specification

### 4.143.6 Output Specification

### 4.143.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Run a small DRP processing job and download unarchived data products.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | Wait for (or force) a processing stack change so that the subsequent re-processing will be forced to use an older software build.          |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | Using provenance information from the products in Step 1, request a re-processing and compare results with previously unarchived products. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

### 4.146 LVV-T159 - Verify implementation of Regenerating Data Products from Previous Data Releases

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Simon Krughoff |

Open LVV-T159 in Jira

#### 4.146.1 Verification Elements

- LVV-167 - DMS-REQ-0336-V-01: Regenerating Data Products from Previous Data Releases

#### 4.146.2 Test Items

Show that un-archived data products from previous data releases can be generated using through the LSST Science Platform.

#### 4.146.3 Predecessors

#### 4.146.4 Environment Needs

##### 4.146.4.1 Software

##### 4.146.4.2 Hardware

#### 4.146.5 Input Specification

#### 4.146.6 Output Specification

#### 4.146.7 Test Procedure

| Step | Description, Input Data and Expected Result |                 |
|------|---|-----------------|
| 1    | Description                                 | Delegate to LSP |
|      | Test Data                                   | No data.        |
|      | Expected                                    |                 |
|      | Result                                      |                 |

### 4.147 LVV-T160 - Verify implementation of Providing a Precovery Service

| Version | Status | Priority | Verification Type | Owner                   |
|---------|--------|----------|-------------------|-------------------------|
| 1       | Draft  | Normal   | Test              | Gregory Dubois-Felsmann |

Open LVV-T160 in Jira

#### 4.147.1 Verification Elements

- LVV-172 - DMS-REQ-0341-V-01: Max elapsed time for precovery results

#### 4.147.2 Test Items

Verify that a technical capability to perform user-directed precovery analyses on difference images exists and that it is exposed through the LSST Science Platform. Verified by testing against precursor datasets.

(Involves: LSP Portal, MOPS and Forced Photometry)

#### 4.147.3 Predecessors

#### 4.147.4 Environment Needs

##### 4.147.4.1 Software

##### 4.147.4.2 Hardware

#### 4.147.5 Input Specification

1. DECam HiTS data could be an appropriate set for this activity.
2. Precovery pipelines for follow-on to alert processing must exist and be made available as a containerized version within the Science Platform.
3. Determine limitations over which general precovery is supported. I would suggest that precovery services be limited to current (or last two) DRP campaigns with the possible addition of including non-DRP products to encompass observations over the preceding year (does this then require means to re-generate PVIs from Alert Production in addition to DRP?)
4. Could re-use elements of LVV-T80 where quasars are used to test faint object detection.

#### 4.147.6 Output Specification

#### 4.147.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Run Precoverly within follow-on Alert Production (i.e. daily post-processing on 30 day store).   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | Within Science Platform, initiate request to perform precovery for a list of sources over same period (and longer). Include among the sources for precovery quasars from LVV-T80.                          |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | Examine the results. Compare the results for the period where there is overlap with precovery run... and quasar photometry with those from LVV-T80 to verify user service performs as production services. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

### 4.148 LVV-T161 - Verify implementation of Logging of catalog queries

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T161 in Jira

#### 4.148.1 Verification Elements

- LVV-176 - DMS-REQ-0345-V-01: Logging of catalog queries

#### 4.148.2 Test Items

Demonstrate logging of queries of LSST databases. Logged queries are globally available to DB administrators but otherwise private excepting the user that made the query.

#### 4.148.3 Predecessors

#### 4.148.4 Environment Needs

##### 4.148.4.1 Software

##### 4.148.4.2 Hardware

#### 4.148.5 Input Specification

#### 4.148.6 Output Specification

#### 4.148.7 Test Procedure

| Step | Description, Input Data and Expected Result |                 |
|------|---|-----------------|
| 1    | Description                                 | Delegate to LSP |
|      | Test Data                                   | No data.        |
|      | Expected                                    |                 |
|      | Result                                      |                 |

### 4.149 LVV-T162 - Verify implementation of Access to Previous Data Releases

| Version | Status | Priority | Verification Type | Owner                   |
|---------|--------|----------|-------------------|-------------------------|
| 1       | Draft  | Normal   | Test              | Gregory Dubois-Felsmann |

Open LVV-T162 in Jira

#### 4.149.1 Verification Elements

- LVV-189 - DMS-REQ-0363-V-01: Access to Previous Data Releases

#### 4.149.2 Test Items

Verify this high-level requirement, which states that the other data access requirements, for images and catalogs, all must be satisfied for multiple data releases. Verified by inspection, i.e., by determining that the data access system components, from middleware through APIs to user interfaces, are designed to support data from multiple releases, as well as by direct testing using a synthetic test environment containing multiple releases.

(Involves: Data Backbone, Managed Database, LSP Portal, LSP JupyterLab, LSP Web APIs, Parallel Distributed Database)

#### 4.149.3 Predecessors

#### 4.149.4 Environment Needs

##### 4.149.4.1 Software

##### 4.149.4.2 Hardware

#### 4.149.5 Input Specification

Requires two or more (fake) releases within DAC (or PDAC) with common area/observations (preferably with some differing results but could use metadata identifying provenance).

#### 4.149.6 Output Specification

#### 4.149.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | From Science Platform initiate request for image and catalog products from one of the two release sets. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | From Science Platform re-issue the same request but specifying the alternate/earlier release set.       |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 3    | Description                                 | Compare results and identify differences that are germane to the relevant Data Release Sets are found.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

#### 4.150 LVV-T163 - Verify implementation of Data Access Services

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T163 in Jira

##### 4.150.1 Verification Elements

- LVV-190 - DMS-REQ-0364-V-01: Total number of data releases

##### 4.150.2 Test Items

Demonstrate that Data Access Services are capable of scaling to serve data from nDRTot (11) data releases over a surveyYears (10) year survey.

##### 4.150.3 Predecessors

#### 4.150.4 Environment Needs

##### 4.150.4.1 Software

##### 4.150.4.2 Hardware

Open LVV-T172 in Jira

### 4.159.1 Verification Elements

- LVV-64 - DMS-REQ-0161-V-01: Optimization of Cost, Reliability and Availability in Order

### 4.159.2 Test Items

In matters of cost, system reliability (functioning properly at a given time) has precedence over system availability (ability to use the system at a given time). The optimization may be outside the realm of direct testing as it is more of a system provisioning guideline but on its face it demands that the Data Management System include failure reporting, regimented change control, acceptance testing, maintenance and monitoring.

### 4.159.3 Predecessors

### 4.159.4 Environment Needs

#### 4.159.4.1 Software

#### 4.159.4.2 Hardware

### 4.159.5 Input Specification

### 4.159.6 Output Specification

### 4.159.7 Test Procedure

| Step | Description, Input Data and Expected Result |                                    |
|------|---|------------------------------------|
| 1    | Description                                 | Analyze resource management policy |
|      | Test Data                                   | No data.                           |
|      | Expected Result                             |                                    |

## 4.160 LVV-T173 - Verify implementation of Pipeline Throughput

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

#### 4.160.4.2 Hardware

### 4.160.5 Input Specification

#### 4.160.6 Output Specification

#### 4.160.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Execute single-day operations rehearsal, observe data products generated in time |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
|      |   |  |

### 4.161 LVV-T174 - Verify implementation of Re-processing Capacity

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T174 in Jira

#### 4.161.1 Verification Elements

- LVV-66 - DMS-REQ-0163-V-01: Re-processing Capacity

#### 4.161.2 Test Items

Verify that the DMS has sufficient processing, storage, and network to reprocess all data within “drProcessingPeriod” (1 year) while maintaining full Prompt Processing capability.

#### 4.161.3 Predecessors

#### 4.161.4 Environment Needs

##### 4.161.4.1 Software

#### 4.161.4.2 Hardware

#### 4.161.5 Input Specification

#### 4.161.6 Output Specification

#### 4.161.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Analyze sizing model; execute DRP, observe scaling |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

### 4.162 LVV-T175 - Verify implementation of Temporary Storage for Communications Links

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T175 in Jira

#### 4.162.1 Verification Elements

- LVV-67 - DMS-REQ-0164-V-01: Temporary Storage for Communications Links

#### 4.162.2 Test Items

Demonstrate that storage capacity is present and usable to prevent data loss if networking is interrupted between summit and base, base and archive, or archive and DAC. The requirement is to have storage necessary to hold tempStorageReIMTTR (200%) of the expected raw data that would arrive during the Mean Time to Repair (summToBaseNetMTTR = 24 hours, baseToArchNetMTTR = 48 hours, archToDacNetMTTR = 48 hours). This scale is further set by  $nCalibExpDay + nRawExpNightMax = 450 + 2800 = 3250$  exposures/day.

##### 4.162.4.1 Software

##### 4.162.4.2 Hardware

#### 4.162.5 Input Specification

#### 4.162.6 Output Specification

#### 4.162.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Analyze sizing model and network/storage design |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

### 4.163 LVV-T176 - Verify implementation of Infrastructure Sizing for “catching up”

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T176 in Jira

#### 4.163.1 Verification Elements

- LVV-68 - DMS-REQ-0165-V-01: Infrastructure Sizing for “catching up”
- LVV-994 - OSS-REQ-0051-V-01: Summit-Base Connectivity Loss

## 4.163.2 Test Items

Demonstrate Data Management System has sufficient excess capacity (compute infrastructure) to process one night's data (2800 exposures) within 24 hours while also maintaining nightly Alert Production (note this is very similar to LVV-T173).

## 4.163.3 Predecessors

## 4.163.4 Environment Needs

### 4.163.4.1 Software

### 4.163.4.2 Hardware

## 4.163.5 Input Specification

## 4.163.6 Output Specification

## 4.163.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Execute single-day operations rehearsal including catch-up after failure, observe data products generated in time |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |

## 4.164 LVV-T177 - Verify implementation of Incorporate Fault-Tolerance

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T177 in Jira

## 4.164.1 Verification Elements

- LVV-69 - DMS-REQ-0166-V-01: Incorporate Fault-Tolerance

## 4.164.2 Test Items

Demonstrate that Data Management Systems have features that prevent data loss. Includes: MD5SUM/checksum verification for data transfer; RAID to eliminate single-point disk failures; multi-site and tape for disaster recovery of raw data; multiple site (and tape?) for backup/recovery of Data Release products; DB transaction logging and backup to maintain DB integrity. (Note: storage to prevent loss in case of networking failures is covered in LVV-T175 ).

|------|---|--|
| 1    | Description                                 | Configure heterogeneous cluster, execute AP+DRP+LSP, observe correct functioning |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

### 4.167 LVV-T180 - Verify implementation of Data Management Unscheduled Downtime

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T180 in Jira

#### 4.167.1 Verification Elements

- LVV-149 - DMS-REQ-0318-V-01: Data Management Unscheduled Downtime

#### 4.167.2 Test Items

This applies only to downtime that would prevent the collection of survey data. Verification means that analysis has occurred to identify likely hardware failures that would prevent survey operations and that mitigations that minimize the downtime to less than DM Downtime (1 day/year) are in place. Known systems that fall in this category include: Image and EFD Archiving, Observatory Operations Data, Telemetry Gateway, Data Backbone, Managed Database, Inter-Site Networks, and Service Management and Monitoring.

#### 4.167.5 Input Specification

#### 4.167.6 Output Specification

#### 4.167.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Analyze likely hardware failures with mitigations to compute estimated unplanned down-time |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |

### 4.168 LVV-T181 - Verify Base Voice Over IP (VOIP)

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Test              | Jeff Kantor |

Open LVV-T181 in Jira

#### 4.168.1 Verification Elements

- LVV-18491 - DMS-REQ-0352-V-02: Base Voice Over IP (VOIP)

## 4.168.2 Test Items

Verify as-built VOIP at the Base Facility is operational and performs as expected (i.e. sufficient number of extensions allocated properly, no frequent drop-outs, no frequent jaggies on video, etc.) on both voice calls and videoconferencing.

## 4.168.3 Predecessors

PMCS DLP-465 Complete

PMCS IT-702 Complete

## 4.168.4 Environment Needs

**4.168.4.1 Software** See pre-conditions.

**4.168.4.2 Hardware** See pre-conditions.

## 4.168.5 Input Specification

1. Base VOIP is installed/configured and Test Personnel have phone sets. Base Videoconference system is installed/configured. Summit, Headquarters, and/or LDF Videoconference system is installed/configured.
2. As-built documentation for all of the above is available.

## 4.168.6 Output Specification

## 4.168.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Test voice calls over VOIP system from Base Facility to locations in Base and to other Rubin Observatory facilities.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | As-built VOIP at the Base Facility is operational and performs as expected (i.e. sufficient number of extensions allocated properly, no frequent drop-outs, etc.). |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 2    | Description                                 | Test video conferences over system from Base Facility to locations in Base and to other Rubin Observatory facilities.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Verify (a) planned and (b) as-built VOIP at the Base Facility is operational and performs as expected (i.e. no frequent drop-outs, no frequent audio glitches, no frequent jaggies on video, etc.). |

## 4.169 LVV-T182 - Verify implementation of Prefer Computing and Storage Down

| Version | Status | Priority | Verification Type | Owner          |

| Step | Description, Input Data and Expected Result |                |
|------|---|----------------|
| 1    | Description                                 | Analyze design |
|      | Test Data                                   | No data.       |
|      | Expected Result                             |                |
|      |   |                |

### 4.170 LVV-T183 - Verify implementation of DMS Communication with OCS

| Version | Status  | Priority | Verification Type | Owner                   |
|---------|---------|----------|-------------------|-------------------------|
| 1       | Defined | Normal   | Test              | Gregory Dubois-Felsmann |

Open LVV-T183 in Jira

#### 4.170.1 Verification Elements

- LVV-146 - DMS-REQ-0315-V-01: DMS Communication with OCS

#### 4.170.2 Test Items

Verify that the DMS at the Base Facility can receive commands from the OCS and send command responses, events, and telemetry back. Verified by Early Integration activities and during AuxTel commissioning.

#### 4.170.3 Predecessors

#### 4.170.4 Environment Needs

##### 4.170.4.1 Software

##### 4.170.4.2 Hardware

#### 4.170.5 Input Specification

#### 4.170.6 Output Specification

#### 4.170.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | From the Base Site, connect to the (simulated) OCS telemetry stream.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             |   |
| 2    | Description                                 | Send a command to the OCS, and observe that the command has been executed.                                  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Confirmation that the OCS command successfully executed.  |
| 3    | Description                                 | Extract information from the telemetry being broadcast by the OCS, and ensure that these data are readable. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A readable extract from the OCS telemetry stream.   |

#### 4.171 LVV-T185 - Verify implementation of Summit to Base Network Availability

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Inspection        | Jeff Kantor |

Open LVV-T185 in Jira

#### 4.171.1 Verification Elements

- LVV-74 - DMS-REQ-0172-V-01: Summit to Base Network Availability

#### 4.171.2 Test Items

Verify the availability of Summit to Base Network by demonstrating that the mean time between failures is less than summToBaseNetMTBF (90 days) over 1 year.

#### 4.171.3 Predecessors

See pre-conditions.

#### 4.171.4 Environment Needs

**4.171.4.1 Software** See pre-conditions.

**4.171.4.2 Hardware** See pre-conditions.

#### 4.171.5 Input Specification

1. PMCS DMTC-7400-2400 Complete.
2. 6 months of historical availability data for this link is available.
3. perSonar installed in Summit and publishing statistics to MadDash.
4. As-built documentation for all of the above is available.

NOE: After the initial test, the corresponding verification elements will be flagged as “Requires Monitoring” such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

#### 4.171.6 Output Specification

#### 4.171.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Monitor summit to base networking for at least 1 week  |
|      | Test Data                                   | LATISS, ComCAM, and/or Full Camera data.   |
|      | Expected Result                             | Summit - base network is operational for 1 week and monitoring data is collected.                            |
| 2    | Description                                 | Extrapolate annual availability, compare with at least 6 months of historical data on the link.              |
|      | Test Data                                   | Historical and current logs  |
|      | Expected Result                             | The mean time between failures (MTBF) is projected to be less than summTo-BaseNetMTBF (90 days) over 1 year. |

### 4.172 LVV-T186 - Verify implementation of Summit to Base Network Reliability

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Demonstration     | Jeff Kantor |

Open LVV-T186 in Jira

#### 4.172.1 Verification Elements

- LVV-75 - DMS-REQ-0173-V-01: Summit to Base Network Reliability

#### 4.172.2 Test Items

Verify the reliability of the summit to base network by demonstrating reconnection and recovery to transfer of data at or exceeding rates specified in LDM-142 following a cut in network connection, within MTTR specification. The network operator will provide MTTR data on links during commissioning and operations.

### 4.172.3 Predecessors

See pre-conditions.

### 4.172.4 Environment Needs

**4.172.4.1 Software** See pre-conditions.

**4.172.4.2 Hardware** See pre-conditions.

### 4.172.5 Input Specification

1. PMCS DMTC-7400-2400 Complete
2. As-built documentation for Summit - Base Network is available.

NOTE: After the initial test, the corresponding verification elements will be flagged as “Requires Monitoring” such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

### 4.172.6 Output Specification

### 4.172.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Disconnect fiber cable at an endpoint location on the base side of the Summit - Base fiber.             |
|      | Test Data                                   | LATISS, ComCAM, or FullCam data   |
|      | Expected Result                             | Fiber is disconnected and the fault is detected by the network monitoring system.                       |
| 2    | Description                                 | Measure the cable with the OTDR to locate the distance from the end point. Diagnose that it is a break. |
|      | Test Data                                   | NA  |
|      | Expected Result                             | OTDR shows the fiber is disconnected (break).   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 3    | Description                                 | Elapse time to simulate the following:  |
|      |   | <ul style="list-style-type: none"> <li>Go to the most inaccessible place which would mean carrying all the tools/splicer/-generator/tent equipment some metres.</li> <li>Erect a tent to make the splice</li> <li>Start the generator</li> <li>Do a splice on some random piece of cable</li> <li>At an end point measure the cable again to ensure it is break free.</li> <li>Take down and reinstall an isolated pole (not in the actual fiber path)</li> <li>Put the cable on the pole.</li> </ul> |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Wall clock advances by 24 hours.  |
| 4    | Description                                 | Clean fiber connections. Restore connection (e.g. reconnect cable). Cycle equipment as necessary to confirm fiber is connected.   |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Network recovers and resumes sending data.  |
| 5    | Description                                 | Measure with OTDR to ensure back to normal state.   |
|      | Test Data                                   | NA  |
|      | Expected Result                             | OTDR indicates normal state.  |

#### 4.173 LVV-T187 - Verify implementation of Summit to Base Network Secondary Link

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Test              | Jeff Kantor |

Open LVV-T187 in Jira

##### 4.173.1 Verification Elements

- LVV-76 - DMS-REQ-0174-V-01: Summit to Base Network Secondary Link

#### 4.173.2 Test Items

Verify automated fail-over from primary to secondary equipment in Rubin Observatory DWDM on simulated failure of primary. Verify bandwidth sufficiency on secondary. Verify automated recovery to primary equipment on simulated restoration of primary. Repeat for failure of Rubin Observatory fiber and fail-over to AURA fiber and DWDM. Demonstrate use of secondary in “catch-up” mode.

#### 4.173.3 Predecessors

See pre-conditions.

#### 4.173.4 Environment Needs

**4.173.4.1 Software** See pre-conditions.

**4.173.4.2 Hardware** See pre-conditions.

#### 4.173.5 Input Specification

1. PMCS DMTC-7400-2400 complete.
2. As-built documentation for Summit - Base Network is available.

NOTE: After the initial test, the corresponding verification elements will be flagged as “Requires Monitoring” such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

#### 4.173.6 Output Specification

#### 4.173.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Transfer data between summit and base on primary equipment (LSST Summit - Base) over uninterrupted 1 day period.  |
|      | Test Data                                   | LATISS, ComCAM, or FullCAM data.  |
|      | Expected Result                             | Normal operations.  |
| 2    | Description                                 | Simulate equipment outage by disconnecting power card from primary DWDM equipment on base side of Summit - Base Fiber.  |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Network fails over to secondary equipment in $\leq 60$ s.   |
| 3    | Description                                 | Transfer data between summit and base over secondary equipment uninterrupted 1 day period while monitoring network.   |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Verify that secondary equipment is capable of transferring 1 night of raw data ( $n\text{CalibExpDay} + n\text{RawExpNightMax} = 450 + 2800 = 3250$ exposures) within summTo-BaseNet2TransMax (72 hours), i.e. at or exceeding rates specified in LDM-142.      |
| 4    | Description                                 | Restore primary equipment (i.e. reconnect power card to primary equipment.)   |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Network recovers to primary in $\leq 60$ s.   |
| 5    | Description                                 | Simulate fiber outage by disconnecting fiber from primary DWDM equipment on base side of Summit - Base Fiber.   |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Network fails over to AURA DWDM and fiber.  |
| 6    | Description                                 | Transfer data between summit and base over AURA fiber and equipment uninterrupted 1 day period while monitoring network.  |
|      | Test Data                                   | LATISS, ComCAM, or FullCAM data.  |
|      | Expected Result                             | Verify that AURA fiber and equipment is capable of transferring 1 night of raw data ( $n\text{CalibExpDay} + n\text{RawExpNightMax} = 450 + 2800 = 3250$ exposures) within summTo-BaseNet2TransMax (72 hours), i.e. at or exceeding rates specified in LDM-142. |
| 7    | Description                                 | Restore primary fiber (i.e. reconnect fiber to Rubin Observatory DWDM equipment.)   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Network recovers to Rubin Observatory fiber and DWDM.   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 8    | Description                                 | Demonstrate use of secondary in “catch-up” mode.  |
|      | Test Data                                   | DAQ data buffer full of images and associated meta-data   |
|      | Expected Result                             | Images from DAQ buffer and associated metadata are retrievable over secondary path while current observing data is being transferred over primary path. |

#### 4.174 LVV-T188 - Verify implementation of Summit to Base Network Ownership and Operation

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Inspection        | Jeff Kantor |

Open LVV-T188 in Jira

##### 4.174.1 Verification Elements

- LVV-77 - DMS-REQ-0175-V-01: Summit to Base Network Ownership and Operation

##### 4.174.2 Test Items

Verify Summit to Base Network Ownership and Operation by LSST and/or the operations entity by inspection of construction and operations contracts and Indefeasible Rights.

##### 4.174.3 Predecessors

PMCS DMTC-7400-2140, -2240, -2330 Complete

##### 4.174.4 Environment Needs

**4.174.4.1 Software** None

**4.174.4.2 Hardware** None

#### 4.174.5 Input Specification

1. As-built documentation for all of the above contracts and IRUs is available.

#### 4.174.6 Output Specification

#### 4.174.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Examine contracts with REUNA and telefonica for fiber ownership and maintenance terms.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Rubin Observatory is owner of fibers on AURA property and Summit - Base DWDM and has 15-year IRU for use of fibers on all segments. REUNA is owner of LS - SCL DWDM on AURA property and in Santiago, and is operator on all fibers and DWDM. Telefonica is contracted to maintain fibers not on AURA property. |

### 4.175 LVV-T189 - Verify implementation of Base Facility Infrastructure

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

Open LVV-T189 in Jira

#### 4.175.1 Verification Elements

- LVV-78 - DMS-REQ-0176-V-01: Base Facility Infrastructure

#### 4.175.2 Test Items

Verify that the (a) planned infrastructure and (b) as-built infrastructure for the Base Facility satisfies the needs for data transfer and buffering, a copy of the Archive Facility, and support for Commissioning.

#### 4.175.3 Predecessors

#### 4.175.4 Environment Needs

##### 4.175.4.1 Software

##### 4.175.4.2 Hardware

#### 4.175.5 Input Specification

#### 4.175.6 Output Specification

#### 4.175.7 Test Procedure

| Step | Description, Input Data and Expected Result |                                 |
|------|---|---------------------------------|
| 1    | Description                                 | Analyze design and sizing model |
|      | Test Data                                   | No data.                        |
|      | Expected Result                             |                                 |

### 4.176 LVV-T190 - Verify implementation of Base Facility Co-Location with Existing Facility

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Robert Gruendl |

---

Open LVV-T192 in Jira

## 4.178.1 Verification Elements

- LVV-183 - DMS-REQ-0352-V-01: Base Wireless LAN (WiFi)

## 4.178.2 Test Items

Verify as-built wireless network at the Base Facility supports minBaseWiFi bandwidth (1000 Mbs).

## 4.178.3 Predecessors

PMCS DLP-465 Complete.

## 4.178.4 Environment Needs

**4.178.4.1 Software** See pre-conditions.

**4.178.4.2 Hardware** Desktop with WiFi NIC, email reader, internet browser.

## 4.178.5 Input Specification

1. Base Wireless LAN is installed/configured and Test Personnel have accounts for email, internet access.
2. As-built documentation for all of the above is available.

## 4.178.6 Output Specification

## 4.178.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Test internet web browsing and file download, email at summit and base over wireless.  |
|      | Test Data                                   | NA   |
|      | Expected Result                             | Verify as-built wireless network at the Base Facility supports minBaseWiFi bandwidth (1000 Mbs). Verify wireless signal strength meets or exceeds typical, and average and peak bandwidths meet or exceed minBaseWiFi bandwidth. |

## 4.179 LVV-T193 - Verify implementation of Base to Archive Network

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Test              | Jeff Kantor |

Open LVV-T193 in Jira

### 4.179.1 Verification Elements

- LVV-81 - DMS-REQ-0180-V-01: Base to Archive Network

### 4.179.2 Test Items

Verify that the data acquired by a DAQ can be transferred within the required time, i.e. verify that link is capable of transferring image for prompt processing in oArchiveMaxTransferTime = 5[second], i.e. at or exceeding rates specified in LDM-142.

### 4.179.3 Predecessors

PMCS DM-Net-5 Complete

### 4.179.4 Environment Needs

**4.179.4.1 Software** See pre-conditions.

#### 4.179.4.2 Hardware See pre-conditions.

#### 4.179.5 Input Specification

1. Archiver/Forwarders are configured at Base, connected to REUNA DWDM, loaded with simulated or pre-cursor data, running on end node computers that are the production hardware or equivalent to it.
2. Archiver/Forwarder receivers or other capability is on configured at LDF, connected to Base - Archive Network, running on end node computers that are the production hardware or equivalent to it.
3. As-built documentation for all of the above is available.

NOTE: This test will be repeated at increasing data volumes as additional observatory capabilities (e.g. ComCAM, FullCam) become available. Final verification will be tested at full operational volume. After the initial test, the corresponding verification elements will be flagged as "Requires Monitoring" such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

#### 4.179.6 Output Specification

#### 4.179.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Transfer data between base and archive while monitoring the network over uninterrupted 1 day period (with repeated transfers on normal observing cadence).  |
|      | Test Data                                   | LATISS, ComCAM, or FullCAM data.  |
|      | Expected Result                             | Data transfers occur without significant delay or frequent latency spikes.  |
| 2    | Description                                 | Analyze the network logs and monitoring system to determine average and peak latency and packet loss statistics.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Data can be transferred within the required time, i.e. verify that link is capable of transferring image for prompt processing in oArchiveMaxTransferTime = 5[second]. Verify transfer of data at or exceeding rates specified in LDM-142 at least 98% of the time. |

## 4.180 LVV-T194 - Verify implementation of Base to Archive Network Availability

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Test              | Jeff Kantor |

Open LVV-T194 in Jira

### 4.180.1 Verification Elements

- LVV-82 - DMS-REQ-0181-V-01: Base to Archive Network Availability

### 4.180.2 Test Items

Verify the availability of the Base to Archive Network communications by demonstrating that it meets or exceeds a mean time between failures, measured over a 1-yr period of MTBF > baseToArchNetMTBF (180[day])

### 4.180.3 Predecessors

PMCS DMTC-7400-2130 Complete

### 4.180.4 Environment Needs

#### 4.180.4.1 Software

#### 4.180.4.2 Hardware

### 4.180.5 Input Specification

1. Archiver/Forwarders are configured at Base, connected to REUNA DWDM, loaded with simulated or pre-cursor data, running on end node computers that are the production hardware or equivalent to it.

2. Archiver/Forwarder receivers or other capability is on configured at LDF, connected to Base - Archive Network, running on end node computers that are the production hardware or equivalent to it.
3. At least 6 months of historical monitoring data on this link is available.
4. As-built documentation for all of the above is available.

NOTE: This test will be repeated at increasing data volumes as additional observatory capabilities (e.g. ComCAM, FullCam) become available. Final verification will be tested at full operational volume. After the initial test, the corresponding verification elements will be flagged as "Requires Monitoring" such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

#### 4.180.6 Output Specification

#### 4.180.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Transfer data between base and archive over uninterrupted 1 week period.  |
|      | Test Data                                   | LATISS, ComCAM, or FullCAM data.  |
|      | Expected Result                             | Data is successfully transferred during the entire week.  |
| 2    | Description                                 | Analyze monitoring/performance data, compare to historical data, and extrapolate to a full year, average and peak throughput and latency.   |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Extrapolated network availability meets baseToArchNetMTBF = 180[day]. Note that this is for complete loss of transfer service (all paths), not a single path failure with successful fail-over. |

### 4.181 LVV-T195 - Verify implementation of Base to Archive Network Reliability

| Version | Status | Priority | Verification Type | Owner       |

| 1       | Draft  | Normal   | Test              | Jeff Kantor |

Open LVV-T195 in Jira

#### 4.181.1 Verification Elements

- LVV-83 - DMS-REQ-0182-V-01: Base to Archive Network Reliability

#### 4.181.2 Test Items

Verify Base to Archive Network Reliability by demonstrating that the network can recover from outages within  $\text{baseToArchNetMTTR} = 48[\text{hour}]$ .

#### 4.181.3 Predecessors

PMCS DM-NET-5 Complete

#### 4.181.4 Environment Needs

**4.181.4.1 Software** See pre-conditions.

**4.181.4.2 Hardware** See pre-conditions.

#### 4.181.5 Input Specification

1. Archiver/Forwarders are configured at Base, connected to REUNA DWDM, loaded with simulated or pre-cursor data, running on end node computers that are the production hardware or equivalent to it.
2. Archiver/Forwarder receivers or other capability is on configured at LDF, connected to Base - Archive Network, running on end node computers that are the production hardware or equivalent to it.
3. At least 6 months of monitoring data for this link is available.
4. As-built documentation for all of the above is available.

NOTE: This test will be repeated at increasing data volumes as additional observatory capabilities (e.g. ComCAM, FullCam) become available. Final verification will be tested at full operational volume. After the initial test, the corresponding verification elements will be flagged as

“Requires Monitoring” such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

#### 4.181.6 Output Specification

#### 4.181.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Disconnect primary fiber on base side of Base - Archive network.  |
|      | Test Data                                   | LATISS, ComCAM, or FullCAM data.  |
|      | Expected Result                             | Network fails over to secondary path.   |
| 2    | Description                                 | Simulate diagnosis and repair by elapsed time.  |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Wall clock advances by 48 hours. Data is successfully transferred over secondary path.  |
| 3    | Description                                 | Reconnect primary fiber on base side of Base - Archive network.   |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Network recovers to primary path.   |
| 4    | Description                                 | Analyze fail-over and recovery times. Compare to historical data and extrapolate to MTTR.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Verify recovery can occur within $\text{baseToArchNetMTTR} = 48[\text{hour}]$ . Demonstrate reconnection and recovery to transfer of data at or exceeding rates specified in LDM-142. |

#### 4.182 LVV-T196 - Verify implementation of Base to Archive Network Secondary Link

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Test              | Jeff Kantor |

Open LVV-T196 in Jira

#### 4.182.1 Verification Elements

- LVV-84 - DMS-REQ-0183-V-01: Base to Archive Network Secondary Link

#### 4.182.2 Test Items

Verify Base to Archive Network Secondary Link failover and capacity, and subsequent recovery primary. Demonstrate the use of the secondary path in “catch-up” mode.

#### 4.182.3 Predecessors

PMCS DM-NET-5 Complete

PMCS DMTC-8000-0990 Complete

PMCS DMTC-8100-2130 Complete

PMCS DMTC-8100-2530 Complete

PMCS DMTC-8200-0600 Complete

#### 4.182.4 Environment Needs

**4.182.4.1 Software** See pre-conditions.

**4.182.4.2 Hardware** See pre-conditions.

#### 4.182.5 Input Specification

1. Archiver/Forwarders are configured at Base, connected to REUNA DWDM, loaded with simulated or pre-cursor data, running on end node computers that are the production

- hardware or equivalent to it.
2. Archiver/Forwarder receivers or other capability is on configured at LDF, connected to Base - Archive Network, running on end node computers that are the production hardware or equivalent to it.
  3. As-built documentation for all of the above is available.

NOTE: This test will be repeated at increasing data volumes as additional observatory capabilities (e.g. ComCAM, FullCam) become available. Final verification will be tested at full operational volume. After the initial test, the corresponding verification elements will be flagged as "Requires Monitoring" such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

#### 4.182.6 Output Specification

##### 4.182.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Transfer data between base and archive on primary links over uninterrupted 1 day period.                           |
|      | Test Data                                   | LATISS, ComCAM, or FullCAM data.   |
|      | Expected Result                             | Data is successfully transferred over primary link at or exceeding rates specified in LDM-142 throughout period.   |
| 2    | Description                                 | Simulate outage by disconnecting fiber on primary fiber on Base side of Base - Archive Network.                    |
|      | Test Data                                   | NA   |
|      | Expected Result                             | Network fails over to secondary links in $\leq 60$ s   |
| 3    | Description                                 | Transfer data between base and archive over secondary equipment uninterrupted 1 day period.                        |
|      | Test Data                                   | LATISS, ComCAM, or FullCAM data.   |
|      | Expected Result                             | Data is successfully transferred over secondary link at or exceeding rates specified in LDM-142 throughout period. |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 4    | Description                                 | Restore connection on primary link by reconnecting fiber.   |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Network recovers to primary.  |
|      |   |   |
| 5    | Description                                 | Demonstrate use of secondary in catch-up mode.  |
|      | Test Data                                   | DAQ buffer full of images and associated metadata.  |
|      | Expected Result                             | Images from DAQ buffer and associated metadata are retrievable over secondary path while current observing data is being transferred over primary path. |
|      |   |   |

#### 4.183 LVV-T197 - Verify implementation of Archive Center

| Version | Status | Priority | Verification Type | Owner          |

### 4.188.6 Output Specification

### 4.188.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Simulate failure on primary paths by disconnecting fiber at an endpoint location in the archive on the Archive - DACs network. |
|      | Test Data                                   | NA   |
|      | Expected Result                             | Networks fail over to secondary paths.   |
| 2    | Description                                 | Monitor transfers on secondary paths for 1 day.  |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 3    | Test Data                                   | No data.   |
|      | Expected Result                             | Transfers occur without extended failures or extended latency spikes. Data transfers on secondary at rates at or above those specified in LDM-142. |
|      | Description                                 | Simulate repair and recovery period by leaving primary fiber disconnected for at least 1 day, then reconnecting primary fiber.                     |
| 3    | Test Data                                   | NA   |
|      | Expected Result                             | Wall clock advances by 1 day. Network recovers to primary path. Verify entire process meets chToDacNetMTTR = 48[hour].                             |

#### 4.189 LVV-T203 - Verify implementation of Archive to Data Access Center Network Secondary Link

| Version | Status | Priority | Verification Type | Owner        |

| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T216 in Jira

##### 4.199.1 Verification Elements

- LVV-139 - DMS-REQ-0308-V-01: Software Architecture to Enable Community Re-Use

##### 4.199.2 Test Items

This test will check:

- That the Alert Distribution payloads are available from documented channels.
- That the Alert Distribution payloads can be installed on LSST Data Facility-managed systems.
- That the Alert Distribution payloads can be executed by LSST Data Facility-managed systems.

##### 4.199.3 Predecessors

##### 4.199.4 Environment Needs

##### 4.199.4.1 Software

**4.199.4.2 Hardware** This test case shall be executed on the Kubernetes Commons at the LDF.

As discussed in <https://dmtm-028.lsst.io/> and <https://dmtm-081.lsst.io/>, the test machine should have at least 16 cores, 64 GB of memory and access to at least 1.5 TB of shared storage.

#### 4.199.5 Input Specification

#### 4.199.6 Output Specification

#### 4.199.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Download Kafka Docker image from <a href="https://github.com/lsst-dm/alert_stream">https://github.com/lsst-dm/alert_stream</a> .     |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Runs without error   |
| 2    | Description                                 | Change to the alert_stream directory and build the docker image.<br><br><code>docker build -t "lsst-kub001:5000/alert_stream"</code> |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Runs without error   |
| 3    | Description                                 | Register it with Kubernetes<br><br><code>docker push lsst-kub001:5000/alert_stream</code>  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Runs without error   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 4    | Description                                 | From the alert_stream/kubernetes directory, start Kafka and Zookeeper:  |
|      |   | <pre>kubect1 create -f zookeeper-service.yaml kubect1 create -f zookeeper-deployment.yaml kubect1 create -f kafka-deployment.yaml kubect1 create -f kafka-service.yaml</pre> <p>(use kubect1 get pods/services between each command to check status; wait until each is "Running" before starting the next command)</p> |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Runs without error  |
| 5    | Description                                 | Confirm Kafka and Zookeeper are listed when running   |
|      |   | <pre>kubect1 get pods</pre> <p>and</p> <pre>kubect1 get services</pre>  |
|      | Test Data                                   | No data.  |
|      |   |   |

| Step            | Description, Input Data and Expected Result  |
|-----------------|--|
| Expected Result | <p>Output should be similar to:</p> <pre>kubectl get pods NAME                READY   STATUS    RESTARTS   AGE kafka-768ddf5564-xwgvh  1/1     Running   0          31s zookeeper-f798cc548-mgkpn 1/1     Running   0          1m</pre> <pre>kubectl get services NAME      TYPE        CLUSTER-IP    EXTERNAL-IP  PORT(S)    AGE kafka    ClusterIP   10.105.19.124 &lt;none&gt;       9092/TCP    6s zookeeper ClusterIP   10.97.110.124 &lt;none&gt;       32181/TCP   2m</pre> |

## 4.200 LVV-T217 - Full Stream Alert Distribution

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T217 in Jira

### 4.200.1 Verification Elements

- LVV-3 - DMS-REQ-0002-V-01: Transient Alert Distribution

### 4.200.2 Test Items

This test will check that the full stream of LSST alerts can be distributed to end users.

Specifically, this will demonstrate that:

- Serialized alert packets can be loaded into the alert distribution system at LSST-relevant scales (10,000 alerts every 39 seconds);
- Alert packets can be retrieved from the queue system at LSST-relevant scales.

### 4.200.3 Predecessors

LVV-T216

### 4.200.4 Environment Needs

**4.200.4.1 Software** The Kafka cluster and Zookeeper shall be instantiated according to the procedure described in LVV-T216.

**4.200.4.2 Hardware** This test case shall be executed on the Kubernetes Commons at the LDF.

As discussed in <https://dmtm-028.lsst.io/> and <https://dmtm-081.lsst.io/>, the test machine should have at least 16 cores, 64 GB of memory and access to at least 1.5 TB of shared storage.

### 4.200.5 Input Specification

Input data: A sample of Avro-formatted alert packets.

### 4.200.6 Output Specification

Multiple Kafka consumers will run and write log files to disk.

The logs will include printing every  $N$ th alert to the log as well as a log summarizing the queue offset.

### 4.200.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-1 from<br>LVV-T866 | Description                                 | Perform the steps of Alert Production (including, but not necessarily limited to, single frame processing, ISR, source detection/measurement, PSF estimation, photometric and astrometric calibration, difference imaging, DIASource detection/measurement, source association). During Operations, it is presumed that these are automated for a given dataset. |
|                      | Test Data                                   |  |
|                      | Expected Result                             | An output dataset including difference images and DIASource and DIAObject measurements.  |

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-2 from<br>LVV-T866 | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.  |
|                      | Test Data                                   |  |
|                      | Expected Result                             |  |
| 2                    | Description                                 | Start a consumer that monitors the full stream and logs a deserialized version of every Nth packet:<br><br><code>kubect1 create -f consumerall-deployment.yaml</code>  |
|                      | Test Data                                   | No data.   |

## 4.201 LVV-T218 - Simple Filtering of the LSST Alert Stream

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T218 in Jira

### 4.201.1 Verification Elements

- LVV-173 - DMS-REQ-0342-V-01: Alert Filtering Service
- LVV-179 - DMS-REQ-0348-V-01: Pre-defined alert filters
- LVV-174 - DMS-REQ-0343-V-01: Number of full-size alerts

### 4.201.2 Test Items

This test will demonstrate the LSST Alert Filtering Service that returns a subset of alerts from the full stream identified by user-provided filters.

Specifically, this will demonstrate that:

- The filtering service can retrieve alerts from the full alert stream and filter them according to their contents;
- The filtered subset can be delivered to science users.

### 4.201.3 Predecessors

LVV-T216

LVV-T217

### 4.201.4 Environment Needs

**4.201.4.1 Software** The Kafka cluster and Zookeeper shall be instantiated according to the procedure described in LVV-T216.

**4.201.4.2 Hardware** This test case shall be executed on the Kubernetes Commons at the LDF.

As discussed in <https://dmtn-028.lsst.io/> and <https://dmtn-081.lsst.io/>, the test machine should have at least 16 cores, 64 GB of memory and access to at least 1.5 TB of shared storage.

### 4.201.5 Input Specification

Input data: A sample of Avro-formatted alert packets derived from LSST simulations corresponding to one night of simulated LSST observing.

### 4.201.6 Output Specification

### 4.201.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-1 from<br>LVV-T216 | Description                                 | Download Kafka Docker image from <a href="https://github.com/lsst-dm/alert_stream">https://github.com/lsst-dm/alert_stream</a> . |
|                      | Test Data                                   |  |
|                      | Expected Result                             | Runs without error   |

| Step                 | Description, Input Data and Expected Result |  |
|----------------------|---|--|
| 1-2 from<br>LVV-T216 | Description                                 | Change to the alert_stream directory and build the docker image.   |
|                      |   | <code>docker build -t "lsst-kub001:5000/alert_stream"</code>   |
|                      | Test Data                                   |  |
| 1-3 from<br>LVV-T216 | Expected Result                             | Runs without error   |
|                      | Description                                 | Register it with Kubernetes  |
|                      |   | <code>docker push lsst-kub001:5000/alert_stream</code>   |
| 1-4 from<br>LVV-T216 | Test Data                                   |  |

## 4.202 LVV-T283 - RAS-00-00: Writing well-formed raw image

| Version | Status   | Priority | Verification Type | Owner           |
|---------|----------|----------|-------------------|-----------------|
| 1       | Approved | Normal   | Test              | Michelle Butler |

Open LVV-T283 in Jira

### 4.202.1 Verification Elements

- LVV-8 - DMS-REQ-0018-V-01: Raw Science Image Data Acquisition
- LVV-9 - DMS-REQ-0020-V-01: Wavefront Sensor Data Acquisition
- LVV-96 - DMS-REQ-0265-V-01: Guider Calibration Data Acquisition
- LVV-28 - DMS-REQ-0068-V-01: Raw Science Image Metadata
- LVV-11 - DMS-REQ-0024-V-01: Raw Image Assembly
- LVV-146 - DMS-REQ-0315-V-01: DMS Communication with OCS
- LVV-115 - DMS-REQ-0284-V-01: Level-1 Production Completeness

### 4.202.2 Test Items

This test will check:

- The successful integration of the Pathfinder components with the DM Header Service and the Level 1 Archiver;
- That the raw images are well-formed and meet specifications in change-controlled documents LSE-61;

This Test Case shall be repeated for each of the different cameras (ATScam, LSSTCam) and sensors (Science, Wavefront, and Guider) combination.

## 4.202.3 Predecessors

None.

## 4.202.4 Environment Needs

### 4.202.4.1 Software

- Level 1 software and services needed to create raw image
- LSST Monitoring Service and plugins specific to monitoring Level 1 Test Stand and services

### 4.202.4.2 Hardware

- Level 1 test stand
- Test machine for LSST Monitoring Service

## 4.202.5 Input Specification

None.

## 4.202.6 Output Specification

Raw image(s) that follow specifications defined in change-controlled document LSE-61.

## 4.202.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Configure system to pull appropriate data from the DAQ emulator |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | A functional DAQ for images to be received from.                |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 2    | Description                                 | Acquire raw data from DAQ readout and DMHS  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | a raw image and a header from the DMHS  |
| 3    | Description                                 | Fetch data and reassemble correctly, regardless of CCD/Sensor manufacturer type (two different types will be used)  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Build the data into a fits file   |
| 4    | Description                                 | Check completeness and correctness of the raw images including format, metadata, and image data; <ul style="list-style-type: none"> <li>• Check proper fetch and reassembly of image data from camera DAQ (correct format and data);</li> <li>• Check proper merge of header service data with image data;</li> <li>• Check correct insertion of exposure specific data needed in the data file that is not supplied by header service;</li> <li>• Check minimum required metadata (from requirements document LSE-61) exists in raw image header;</li> </ul> |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | a well formed FITS file with a proper header that has been verified to be correct.  |
| 5    | Description                                 | Check that the checksum of the file matches the previously calculated value that will be passed on to downstream services   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | a MD5sum number generated from the step 4 file.   |
| 6    | Description                                 | Check confirmation that the data files arrive at their destination intact   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | a transfer of the file to the correct location for further retrieval from other services.   |
| 7    | Description                                 | Check that LSST Monitoring Service showed the appropriate information successfully  |
|      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             | all systems remained green through out the test, and showed all systems up and available. |

- LVV-11 - DMS-REQ-0024-V-01: Raw Image Assembly
- LVV-146 - DMS-REQ-0315-V-01: DMS Communication with OCS
- LVV-115 - DMS-REQ-0284-V-01: Level-1 Production Completeness

##### 4.203.2 Test Items

This test will check:

- The successful integration of the DAQ archiver components with the CCOB
- That the file can then be ingested into the DBB and be retrieved for further analysis

### 4.203.3 Predecessors

None.

### 4.203.4 Environment Needs

#### 4.203.4.1 Software

- CCOB device and the software to produce a file to be transferred and kept
- DBB software to produce a retrieval file for further processing

#### 4.203.4.2 Hardware

- CCOB
- Test machine for LSST Monitoring Service
- consolidate DB
- DBB ingest file system
- DBB output file system
- data transfer protocol to move data from CCOB file systems to DBB ingest file system

### 4.203.5 Input Specification

None.

### 4.203.6 Output Specification

- CCOB (raw image) files that follow specifications;
- DBB files that follow specifications;
- CCOB device directs a human to where a file is wanted to be stored in the DBB;
- Transfer the file to the DBB ingest area;

### 4.203.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | CCOB device directs a human to where a raw file is wanted to be stored in the DBB  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | A file with a unique file name is in a file system somewhere, and the data is then transferred to NCSA.  |
| 2    | Description                                 | Move the data from the transferred directory into the DBB foreign file ingest file system.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | A command is executed by a human with a file name and path to the file wanted to be stored in the DBB. The file is transferred to NCSA's DBB ingest area.  |
| 3    | Description                                 | Have data inspected by scientist for managing that all data was transferred.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | a specific Okay to move forward; or something is broke.  |
| 4    | Description                                 | The DBB is notified of a new file being in the ingest area, and the DBB ingest is run manually to ingest the CCOB file.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | The DBB puts the resulting file into the DBB file systems depending on what type of file it is. The DB is updated with metadata and providence of the file to be kept. The resulting file system is queryable by the LSP to find the CCOB raw image. |
| 5    | Description                                 | The LSP can review and use the CCOB raw data file that was stored originally somewhere else such as slac   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | LSP has the ability to find the file and view/use it.  |

#### 4.204 LVV-T285 - RAS-00-10: Raw images in Observatory Operations Data Service

| Version | Status   | Priority | Verification Type | Owner           |
|---------|----------|----------|-------------------|-----------------|
| 1       | Approved | Normal   | Test              | Michelle Butler |

Open LVV-T285 in Jira

#### 4.204.1 Verification Elements

None.

#### 4.204.2 Test Items

This test will check:

- The handoff of a raw image from the Level 1 Archiver to the OODS cache manager is successful;
- A recently taken raw image is accessible to the Observatory Operations staff at the base and summit;

This Test Case shall be repeated for each of the different cameras (ATScam, LSSTCam) and sensors (Science, Wavefront, and Guider) combination.

#### 4.204.3 Predecessors

LVV-T283

#### 4.204.4 Environment Needs

**4.204.4.1 Software** The following software must be installed:

- Level 1 Test Stand (include software from LVV-T283 - RAS-00-00)
- OODS cache manager
- LSST Monitoring Service and plugins specific to monitoring raw images and OODS
- LSST stack for checking raw images

**4.204.4.2 Hardware** To complete all tests in a manner which reflects the real system, the following hardware is needed. Note: If not testing inter-machine access, the hardware can be minimized to a single machine outside of the Level 1 Test Stand.

- Level1TestStand(include hardware from LVV-T283 - RAS-00-00)+read/write access to OODS cache disk
- Test Machine for OODS cache manager with read/write access to OODS cache disk
- Test machine for Observatory Operations staff at "base" that can access OODS cache disk
- Test machine for Observatory Operations staff at "summit" that can access OODS cache disk
- Test machine for LSST Monitoring Service

Size of cache disk is determined by number of files to be included in the test.

#### 4.204.5 Input Specification

#### 4.204.6 Output Specification

Raw image(s) that follow format defined in LSE-61;

Database (may be SQLite file) that enables the raw image(s) to be accessed via a "Data Butler".

#### 4.204.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Initialize all services configuring the Level 1 Archiver Service so that the raw images are to be saved to the OODS  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | all camera and services for images are running and reporting green through the monitoring programs for the services. |
| 2    | Description                                 | Acquire a raw image  |
|      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 3    | Expected Result                             | Image present in the input folder.  |
|      | Description                                 | <i>The handoff of the raw image from the Level 1 Archiver Service to the test OODS automatically occurs</i>   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | the raw image with a proper header is written to a file area managed by the OODS  |
| 4    | Description                                 | For each of the expected raw images, verify that the checksum matches the original Level 1 checksum   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | checksum of the file is checked against the file for verification that the OODS has the correct file and it matches the original md5sum of the FITS file. |
| 5    | Description                                 | Check that LSST Monitoring Service showed the appropriate information successfully  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Make sure all camera and OODS systems were available throughout this test.  |

#### 4.205 LVV-T286 - RAS-00-20: Raw image are part of the permanent record of survey via DBB

| Version | Status   | Priority | Verification Type | Owner           |
|---------|----------|----------|-------------------|-----------------|
| 1       | Approved | Normal   | Test              | Michelle Butler |

Open LVV-T286 in Jira

##### 4.205.1 Verification Elements

- LVV-28 - DMS-REQ-0068-V-01: Raw Science Image Metadata
- LVV-177 - DMS-REQ-0346-V-01: Data Availability

- LVV-115 - DMS-REQ-0284-V-01: Level-1 Production Completeness

#### 4.205.2 Test Items

This test will check:

- That the handoff of a raw image from the Level 1 Archiver Service to the DBB buffer manager is successful;
- That the raw image is ingested into the Data Backbone successfully;
- That the monitoring of the above items is successful;

This Test Case shall be repeated for each of the different cameras (ATScam, LSSTCam) and sensors (Science, Wavefront, and Guider) combination.

Note: For a complete check of the various aspects of what it means for a raw image to be in the Data Backbone, see the tests for the Data Backbone.

#### 4.205.3 Predecessors

LVV-T283

#### 4.205.4 Environment Needs

##### 4.205.4.1 Software

- Level 1 Test Stand
- DBB buffer manager
- DBB raw image ingestion
- DBB database

- LSST Monitoring Service and plugins specific to monitoring raw images, DBB buffer manager, and DBB

#### **4.205.4.2 Hardware**

- Level 1 Test Stand (include hardware from LVV-T-283 - RAS-00-00) + read/write access to DBB buffer disk;
- Test Machine for DBB buffer manager with read/write access to DBB buffer disk;
- Test machine for each DBB endpoint with read/write access to DBB disk;
- Test machine for LSST Monitoring Service

Size of buffer disk and DBB disk is determined by number of files to be included in the test.

Note: If not testing inter-machine operability, then the hardware can be minimized to a single machine outside of the Level 1 test stand.

#### **4.205.5 Input Specification**

None

#### **4.205.6 Output Specification**

- Raw image(s) are saved to storage and replicated to correct locations with checksums that match original Level 1 checksum;
- Database containing information of the following types: physical, location, science meta-data, provenance as specified in LSE-61;
- Both image(s) and database entries replicated correctly;

#### **4.205.7 Test Procedure**

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Initialize all services configuring the Level 1 Archiver Service so that the raw images are to be archived to the DBB   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | all services for the camera images and the DBB services are all running and ready for data.   |
| 2    | Description                                 | Acquire a raw image (see LVV-T283 - RAS-00-00)  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | have a raw Fits file with proper header.  |
| 3    | Description                                 | After the automatic handoff of the raw image between the Level 1 Archiver Service and the DBB buffer manager, the raw image will automatically be ingested into the Data Backbone   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | the DBB file systems will have the file, and metadata and providence will be recorded in the consolidated DB. The file will also be replicated to mulitple locations for DR.  |
| 4    | Description                                 | Check that the raw image is accessible at each DBB endpoint and matches original Level 1 checksum   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | data resides at NCSA DBB end point, and Chile end point and match with the same checksum.   |
| 5    | Description                                 | Check that LSST Monitoring Service showed the appropriate information successfully  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | all related systems remained up during this test.   |
| 6    | Description                                 | More complete tests of the DBB can be done by running the DBB service tests on the raw image(s). These would check correctness and completeness of the data stored in the database as well as checking that the file has been replicated to all required places |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | These would be more tests of when things go wrong to make sure that the DBB is able to continue to work, and not be in the way of taking images from the camera   |

## 4.206 LVV-T287 - RAS-00-30: Raw Image Archiving Availability, Throughput, Reliability, and Heterogeneity

| Version | Status   | Priority | Verification Type | Owner           |
|---------|----------|----------|-------------------|-----------------|
| 1       | Approved | Normal   | Test              | Michelle Butler |

Open LVV-T287 in Jira

### 4.206.1 Verification Elements

- LVV-5 - DMS-REQ-0008-V-01: Pipeline Availability
- LVV-65 - DMS-REQ-0162-V-01: Pipeline Throughput
- LVV-68 - DMS-REQ-0165-V-01: Infrastructure Sizing for “catching up”
- LVV-70 - DMS-REQ-0167-V-01: Incorporate Autonomics
- LVV-145 - DMS-REQ-0314-V-01: Compute Platform Heterogeneity
- LVV-149 - DMS-REQ-0318-V-01: Data Management Unscheduled Downtime
- LVV-140 - DMS-REQ-0309-V-01: Raw Data Archiving Reliability

### 4.206.2 Test Items

This test will check:

- Raw Image Archiving meets availability requirements;
- Raw Image Archiving meets throughput requirements;
- Raw Image Archiving meets reliability requirements;
- Raw Image Archiving meets heterogeneity requirements;

This test case need to be completed when more information is available.

### 4.206.3 Predecessors

### 4.206.4 Environment Needs

#### 4.206.4.1 Software

#### 4.206.4.2 Hardware

### 4.206.5 Input Specification

### 4.206.6 Output Specification

### 4.206.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | these will be filled out as the service becomes more known as to what the availability, throughput, reliability and heterogeneity are. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | The archive system will stay up through thick and thin and perform like it's suppose to.   |

## 4.207 LVV-T362 - Installation of the LSST Science Pipelines Payloads

| Version | Status | Priority | Verification Type | Owner         |
|---------|--------|----------|-------------------|---------------|
| 1       | Draft  | Normal   | Test              | John Swinbank |

Open LVV-T362 in Jira

#### 4.207.1 Verification Elements

- LVV-29 - DMS-REQ-0069-V-01: Processed Visit Images
- LVV-98 - DMS-REQ-0267-V-01: Source Catalog
- LVV-139 - DMS-REQ-0308-V-01: Software Architecture to Enable Community Re-Use
- LVV-127 - DMS-REQ-0296-V-01: Pre-cursor, and Real Data
- LVV-15 - DMS-REQ-0033-V-01: Provide Source Detection Software

#### 4.207.2 Test Items

This test will check that:

- The Alert Production Pipeline payload is available for installation from documented channels;
- The Data Release Production Pipeline payload is available for installation from documented channels;
- The Calibration Products Production Pipeline payload is available for installation from documented channels;
- These payloads can be installed on systems at the LSST Data Facility following available documentation;
- The installed pipeline payloads are capable of successfully executing basic integration tests.

Note that this test assumes a 2018-era packaging of the Science Pipelines software, in which all the above payloads are represented by a single “meta-package”, `lsst_distrib`.

#### 4.207.3 Predecessors

#### 4.207.4 Environment Needs

**4.207.4.1 Software** Science Pipelines prerequisite software, as documented at <https://pipelines.lsst.io/>, must be installed on the target system.

**4.207.4.2 Hardware** This test requires a workstation or equivalent system running an operating system supported by the LSST Science Pipelines.

#### 4.207.5 Input Specification

#### 4.207.6 Output Specification

#### 4.207.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | The LSST Science Pipelines, described by the <code>lsst_distrib</code> meta-package, should be installed following the documentation available at <a href="https://pipelines.lsst.io/">https://pipelines.lsst.io/</a> . The suggested Conda environment will be used to ensure that a supported execution environment is available. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Detailed output will depend on the installation method chosen, but will confirm the successful installation of the Science Pipelines.   |
| 2    | Description                                 | The <code>lsst_distrib</code> top-level metapackage will be enabled. Assuming that the software has been installed at <code>\${LSST_DIR}</code> :<br><br><pre>source \${LSST_DIR}/loadLSST.bash setup lsst_distrib</pre>  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Nothing is printed. The command<br><br><pre>eups list -s lsst_distrib</pre><br>may be used to confirm that the correct version of the codebase has been installed.  |
| 3    | Description                                 | The “LSST Stack Demo” package will be downloaded onto the test system from <a href="https://github.com/lsst/lsst_dm_stack_demo/releases">https://github.com/lsst/lsst_dm_stack_demo/releases</a> . The version corresponding to the version of the Science Pipelines under test should be chosen.                                   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Depends on the tool selected by the user for downloading.   |
| 4    | Description                                 | The stack demo package is uncompressed into a directory <code>\${DEMO_DIR}</code> .   |
|      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 5    | Expected Result                             | Depends on options given to the tar command. Should confirm the availability of the stack demo source. |
|      | Description                                 | The demo package will be executed by following the instructions in its README file.                    |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Successful execution will result in the string "Ok" being returned.                                    |

## 4.208 LVV-T363 - Science Pipelines Release Documentation

| Version | Status | Priority | Verification Type | Owner         |
|---------|--------|----------|-------------------|---------------|
| 1       | Draft  | Normal   | Inspection        | John Swinbank |

Open LVV-T363 in Jira

### 4.208.1 Verification Elements

- LVV-139 - DMS-REQ-0308-V-01: Software Architecture to Enable Community Re-Use
- LVV-3402 - DMS-REQ-0360-V-01: Median astrometric error on 20 arcmin scales

### 4.208.2 Test Items

This test will check:

- That a particular Science Pipelines release is adequately described by documentation at the <https://pipelines.lsst.io/> site;
- That the Science Pipelines release is accompanied by a characterization report which describes its scientific performance.

### 4.208.3 Predecessors

#### 4.208.4 Environment Needs

**4.208.4.1 Software** A web browser.

**4.208.4.2 Hardware** A device with internet access.

#### 4.208.5 Input Specification

#### 4.208.6 Output Specification

#### 4.208.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Load the Science Pipelines website at <a href="https://pipelines.lsst.io/">https://pipelines.lsst.io/</a> .  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | The website is displayed.  |
| 2    | Description                                 | Identify documentation for the release under test. This should be clearly labelled on the documentation site.  |
|      |   | If the latest release is being tested, the default page loaded when visiting <a href="https://pipelines.lsst.io/">https://pipelines.lsst.io/</a> should be the documentation required.   |
|      |   | If this test is for another release, the site should present clear instructions for changing the edition (or version) of the documentation being examined, and documentation for the release under test should be available.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | The documentation for the release under test is displayed.   |
|      |   |  |
| 3    | Description                                 | Inspect the documentation to ensure that it refers to the release under test, and that it provides:  |
|      |   | <ul style="list-style-type: none"> <li>• Release notes, describing changes in this release relative to the previous;</li> <li>• Installation instructions, together with a list of supported platforms and prerequisites;</li> <li>• Getting started information.</li> </ul> |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Test Data                                   | No data.  |
|      | Expected Result                             | The user is satisfied that the required information is available.   |
|      |   |   |
| 4    | Description                                 | Locate the Characterization Metric Report corresponding to this release. It should be linked from the main release documentation.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | The user is satisfied that the report is available.   |
| 5    | Description                                 | Verify that the characterization metric report describes the scientific performance of the release in terms of a selection of performance metrics drawn from high-level requirements documentation (the Science Requirements Document, LPM-17; the LSST System Requirements, LSE-29; and/or the Observatory System Specifications, LSE-30). |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Metric values describing the performance of the release, for example as computed by validate_drp, are described in the report.  |

## 4.209 LVV-T368 - Loading and processing Camera test data

| Version | Status   | Priority | Verification Type | Owner         |
|---------|----------|----------|-------------------|---------------|
| 2       | Approved | Normal   | Test              | John Swinbank |

Open LVV-T368 in Jira

### 4.209.1 Verification Elements

- LVV-129 - DMS-REQ-0298-V-01: Data Product and Raw Data Access
- LVV-63 - DMS-REQ-0160-V-01: Provide User Interface Services
- LVV-23 - DMS-REQ-0060-V-01: Bias Residual Image

### 4.209.2 Test Items

This test will check:

- That Camera test data is available for processing in the LSST Data Facility, and accessible through the LSST Science Platform;
- That the Data Management I/O abstraction (the “Data Butler”) can load that data into the Science Platform environment;
- That Data Management algorithmic “tasks” can be executed to process that data;
- That results can be displayed in the Firefly display tool.

### 4.209.3 Predecessors

Executing LVV-T374 will satisfy the preconditions for this test, assuming that \$REPOSITORY\_PATH is set equal to the output location used in LVV-T374.

### 4.209.4 Environment Needs

**4.209.4.1 Software** The LSST Science Pipelines version w\_2018\_45 must be available within the Notebook Aspect of the LSST Science Platform.

**4.209.4.2 Hardware** This test assumes the availability of the Notebook and Portal aspects of the LSST Science Platform, deployed at <https://lsst-lspdev.ncsa.illinois.edu>.

### 4.209.5 Input Specification

Appropriate data — to include a “raw” and a “bias” exposure — from the Camera test systems must be available in a Butler data repository on a filesystem accessible to the Notebook Aspect of the Science Platform.

For the purposes of the following discussion, we assume that:

- Visit 258334666 from RTM (Raft Tower Module) 007 will be used;

- The data is available in a repository at `/project/bootcamp/repo_RTM-007/` on the Data Facility GPFS filesystem

In the test script, we refer to “258334666” as “\$VISIT\_ID” and “/project/bootcamp/repo\_RTM-007/” as “\$REPOSITORY\_PATH”; other data may be substituted as appropriate.

#### 4.209.6 Output Specification

#### 4.209.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Connect to the Notebook Aspect of the Science Platform following the instructions at <a href="https://nb.lsst.io/">https://nb.lsst.io/</a> . Log in, and “spawn” a new machine with image “Weekly 2018_45” and size “small”. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | The JupyterLab environment appears.  |
| 2    | Description                                 | Create a terminal session. Use it to set up the LSST tools, then download and build version 5c12b06e6 of obs_lsst:   |
|      |   | <pre>\$ source /opt/lsst/software/stack/loadLSST.bash \$ setup lsst_distrib \$ git clone https://github.com/lsst/obs_lsst.git \$ cd obs_lsst \$ git checkout 5c12b06e6 \$ setup -k -r . \$ scon</pre>                        |
|      |   | <p>Arrange for obs_lsst to automatically be added to the environment when starting a new notebook:</p> <pre>\$ echo "setup -j -r ~/obs_lsst" &gt;&gt; ~/notebooks/.user_setups</pre>   |
|      |   | Exit the terminal.   |
|      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Expected Result                             | No errors are seen during execution of the provided commands.  |
| 3    | Description                                 | Create a new "LSST" notebook.  |
|      |   | Import the standard libraries required for the rest of this test:  |
|      |   | <pre>import os import lsst.afw.display as afwDisplay from lsst.daf.persistence import Butler from lsst.ip.isr import IsrTask from firefly_client import FireflyClient from IPython.display import IFrame</pre> |
|      |   | and execute the cell.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Nothing is printed.  |
| 4    | Description                                 | Create a Data Butler client, and use it to retrieve the data which will be used for this test.   |
|      |   | <pre>butler = Butler(\$REPOSITORY_PATH) raw = butler.get("raw", visit=\$VISIT_ID, detector=2) bias = butler.get("bias", visit=\$VISIT_ID, detector=2)</pre>  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Nothing is printed.  |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 5    | Description                                 | Initialize the Firefly display system:   |
|      |   | <pre> my_channel = '{}_test_channel'.format(os.environ['USER']) server = 'https://lsst-lspdev.ncsa.illinois.edu' ff='{}firefly/slate.html?__wsch={}'.format(server, my_channel) IFrame(ff,800,600) afwDisplay.setDefaultBackend('firefly') afw_display = afwDisplay.getDisplay(frame=1,                                    name=my_channel) </pre> |
|      |   | Click on the link provided after executing the above.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | A Firefly window is shown.   |
| 6    | Description                                 | Display the raw image data in the Firefly window:  |
|      |   | <code>afw_display.mtv(raw)</code>  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Raw image data is displayed.   |
|      |   |  |
| 7    | Description                                 | Configure and run an Instrument Signature Removal (ISR) task on the raw data. Most corrections are disabled for simplicity. but the bias frame is applied.   |
|      |   | <pre> isr_config = IsrTask.ConfigClass() isr_config.doDark=False isr_config.doFlat=False isr_config.doFringe=False isr_config.doDefect=False isr_config.doAddDistortionModel=False isr_config.doLinearize=False isr = IsrTask(config=isr_config) result = isr.run(raw, bias=bias) </pre>   |
|      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 8    | Expected Result                             | Nothing is printed.   |
|      | Description                                 | Display the corrected image data in the Firefly window:       |
|      | Test Data                                   | afw_display.mtv(result.exposure)<br>No data.                  |
|      | Expected Result                             | Processed (trimmed, bias-subtracted) image data is displayed. |

## 4.210 LVV-T374 - Ingesting Camera test data

| Version | Status   | Priority | Verification Type | Owner         |
|---------|----------|----------|-------------------|---------------|
| 1       | Approved | Normal   | Test              | John Swinbank |

Open LVV-T374 in Jira

### 4.210.1 Verification Elements

- LVV-130 - DMS-REQ-0299-V-01: Data Product Ingest
- LVV-129 - DMS-REQ-0298-V-01: Data Product and Raw Data Access

### 4.210.2 Test Items

This test will check:

- That raw Camera test data is available on a filesystem in the LSST Data Facility;
- That raw Camera test data can be ingested and made available through the Data Management I/O abstraction (the “Data Butler”).

### 4.210.3 Predecessors

#### 4.210.4 Environment Needs

**4.210.4.1 Software** The LSST Science Pipelines version w\_2018\_45 must be available within the Notebook Aspect of the LSST Science Platform.

**4.210.4.2 Hardware** This test assumes the availability of the Notebook aspect of the LSST Science Platform, deployed at <https://lsst-lspdev.ncsa.illinois.edu>.

#### 4.210.5 Input Specification

Appropriate raw data from Camera test systems must be available on a filesystem within the LSST Data Facility. This test data is assumed to include visit 258334666 (hereafter referred to as \$VISIT\_ID) from RTM (Raft Tower Module) 007 for the purposes of this test, but other, equivalent, may be substituted.

At time of writing, suitable data may be found on the GPFS filesystem at /project/bootcamp/data/LCA-11021\_RTM-007/7086/fe55\_raft\_acq/v0/44981. In future, as data transport procedures to the Data Facility become more streamlined and formalised, this data may be moved elsewhere or made available through some other system. Throughout the test script, we use the string "\$IN-PUT\_DATA\_DIR" as an alias for "/project/bootcamp/data/LCA-11021\_RTM-007/7086/fe55\_raft\_acq/v0/44981" or wherever this data has been moved to.

#### 4.210.6 Output Specification

#### 4.210.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Connect to the Notebook Aspect of the Science Platform following the instructions at <a href="https://nb.lsst.io/">https://nb.lsst.io/</a> . Log in, and "spawn" a new machine with image "Weekly 2018_45" and size "large". |
|      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             | The JupyterLab environment appears.   |
| 2    | Description                                 | <p>Create a terminal session. Use it to set up the LSST tools, then download and build version 5c12b06e6 of obs_lsst:</p> <pre> \$ source /opt/lsst/software/stack/loadLSST.bash \$ setup lsst_distrib \$ git clone https://github.com/lsst/obs_lsst.git \$ cd obs_lsst \$ git checkout 5c12b06e6 \$ setup -k -r . \$ scons </pre>  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | No errors are seen during execution of the provided commands.   |
| 3    | Description                                 | <p>Ingest RTM-007 test data by executing the following commands:</p> <pre> OUTPUT_REPO_DIR=\$OUTPUT_DATA_DIR INPUT_DATA_DIR=\$INPUT_DATA_DIR mkdir -p \$OUTPUT_REPO_DIR echo "lsst.obs.lsst.ts8.Ts8Mapper" &gt; \$OUTPUT_REPO_DIR/_mapper ingestImages.py \$OUTPUT_REPO_DIR \$INPUT_DATA_DIR/*/*.fits constructBias.py \$OUTPUT_REPO_DIR -rerun calibs -id imageType=BIAS -batch-type smp -cores 4     ingestCalibs.py      \$OUTPUT_REPO_DIR      -calibType      bias      \$OUT- PUT_REPO_DIR/rerun/calibs/bias/*/*.fits      -validity      9999      -output      \$OUT- PUT_REPO_DIR/CALIB -mode=link </pre> <p>Where:</p> <p>\$OUTPUT_DATA_DIR is some location on shared storage to which the user has write permission;</p> <p>\$INPUT_DATA_DIR is defined in the test case description.</p> |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Many status messages are logged to screen, and the command exits with status 0.   |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 4    | Description                                 | Demonstrate that raw and bias data for visit \$VISIT_ID have been made available in the repository. Load a Python interpreter (run “python”) and execute the following:                     |
|      |   | <pre> from lsst.daf.persistence import Butler visit_id = \$VISIT_ID b = Butler(\$OUTPUT_DATA_DIR) b.get("raw", visit=visit_id, detector=2) b.get("bias", visit=visit_id, detector=2) </pre> |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Each call to b.get() returns an instance of an ExposureF object. Warnings about lack of dark-time or WCS information may be ignored.  |

## 4.211 LVV-T376 - Verify the Calculation of Ellipticity Residuals and Correlations

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Leanne Guy |

Open LVV-T376 in Jira

### 4.211.1 Verification Elements

- LVV-3404 - DMS-REQ-0362-V-01: Median residual PSF ellipticity correlations on 5 arcmin scales
- LVV-9780 - DMS-REQ-0362-V-02: Max fraction of excess ellipticity residuals on 1 and 5 arcmin scales

### 4.211.2 Test Items

Verify that the DMS includes software to enable the calculation of the ellipticity residuals and correlation metrics defined in the OSS.

### 4.211.3 Predecessors

- LVV-9765 - DMS-REQ-0359-V-16: Accuracy of zero point for colors without u-band

### 4.212.2 Test Items

Verify that the DMS system provides software to calculate photometric performance metrics, and that the algorithms are properly calculating the desired quantities. Note that because the DMS requirement is that the software shall be provided (and not on the actual measured values of the metrics), we verify all of the requirements via a single test case.

|                      | Expected Result                             |   |
| 3                    | Description                                 | Execute the LSST Stack package 'validate_drp' (or an alternate package that is relevant) on this dataset to perform the measurements of the metrics.                      |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             | Measurements of validation metrics and the presence of QA plots resulting from the validation pipeline.   |
| 4                    | Description                                 | Compare measured photometry to known values from input simulated data, and confirm that the output values for all of the photometric performance metrics are as expected. |
|                      | Test Data                                   | No data.  |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Expected Result                             | Measured astrometry metrics that are within reasonable values given the (known) input dataset. |

#### 4.213 LVV-T378 - Verify Calculation of Astrometric Performance Metrics

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Leanne Guy |

Open LVV-T378 in Jira

##### 4.213.1 Verification Elements

- LVV-9778 - DMS-REQ-0360-V-12: RMS difference between r-band and other filter separation
- LVV-9777 - DMS-REQ-0360-V-11: Max fraction of r-band color difference outliers
- LVV-9779 - DMS-REQ-0360-V-13: Max fraction exceeding limit on 200 arcmin scales
- LVV-9773 - DMS-REQ-0360-V-07: Outlier limit on 5 arcmin scales
- LVV-9770 - DMS-REQ-0360-V-05: Outlier limit on 20 arcmin scales
- LVV-9775 - DMS-REQ-0360-V-09: Outlier limit on 200 arcmin scales
- LVV-9769 - DMS-REQ-0360-V-04: Median absolute error in RA, Dec
- LVV-9774 - DMS-REQ-0360-V-08: Median astrometric error on 200 arcmin scales
- LVV-9768 - DMS-REQ-0360-V-03: Median astrometric error on 5 arcmin scales
- LVV-9771 - DMS-REQ-0360-V-06: Color difference outlier limit relative to r-band
- LVV-9776 - DMS-REQ-0360-V-10: Max fraction exceeding limit on 20 arcmin scales
- LVV-9767 - DMS-REQ-0360-V-02: Max fraction exceeding limit on 5 arcmin scales

#### 4.213.2 Test Items

Verify that the DMS system provides software to calculate astrometric performance metrics, and that the algorithms are properly calculating the desired quantities. Note that because the DMS requirement is that the software shall be provided (and not on the actual measured values of the metrics), we verify all of the requirements via a single test case.

#### 4.213.3 Predecessors

#### 4.213.4 Environment Needs

##### 4.213.4.1 Software

##### 4.213.4.2 Hardware

#### 4.213.5 Input Specification

#### 4.213.6 Output Specification

#### 4.213.7 Test Procedure

| Step                 | Description, Input Data and Expected Result |   |
|----------------------|---|---|
| 1-1 from<br>LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:  |
|                      | Test Data                                   |   |
|                      | Expected Result                             | Butler repo available for reading.  |
| 2                    | Description                                 | Point the butler to an appropriate (precursor or simulated) dataset containing data in all filters, that is sufficient for the purposes of measuring astrometric performance metrics. |
|                      | Test Data                                   | No data.  |
|                      | Expected Result                             |   |
| 3                    | Description                                 | Execute the LSST Stack package 'validate_drp' (or an alternate package that is relevant) on this dataset to perform the measurements of the metrics.                                  |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 4    | Test Data                                   | No data.  |
|      | Expected Result                             | Measurements of validation metrics and the presence of QA plots resulting from the validation pipeline.   |
|      | Description                                 | Compare measured astrometry to known (for simulated data) or measured (if using precursor data) values from input (precursor or simulated) data, and confirm that the output values for all of the astrometric performance metrics are as expected. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Measured astrometry metrics that are within reasonable values given the (known) input dataset.  |

#### 4.214 LVV-T385 - Verify implementation of minimum number of simultaneous retrievals of CCD-sized coadd cutouts

| Version | Status  | Priority | Verification Type | Owner      |
|---------|---------|----------|-------------------|------------|
| 1       | Defined | Normal   | Test              | Leanne Guy |

Open LVV-T385 in Jira

##### 4.214.1 Verification Elements

- LVV-3394 - DMS-REQ-0377-V-01: Min number of simultaneous single-CCD coadd cutout image users

##### 4.214.2 Test Items

Verify that at least **ccdRetrievalUsers = 20** users can simultaneously retrieve a single CCD-sized coadd cutout using the IVOA SODA protocol.

##### 4.214.3 Predecessors

#### 4.214.4 Environment Needs

##### 4.214.4.1 Software

##### 4.214.4.2 Hardware

##### 4.214.5 Input Specification

##### 4.214.6 Output Specification

##### 4.214.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Confirm that CCD-sized cutouts from coadds, also containing mask and variance planes, are available on the SODA server. If none are available, copy an image (or some images) to the server. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | At least one CCD-sized coadd cutout is available, and is a well-formed image.  |
| 2    | Description                                 | Simulate SODA queries by at least <b>ccdRetrievalUsers = 20</b> users at the same time.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | Confirm that all simulated users retrieved the desired image(s), and that the returned images are well-formed, with (at least) image, mask, and variance planes.                             |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | All of the simulated <b>ccdRetrievalUsers = 20</b> users retrieved images within the specified time (see related Verification Element and Test Case).  |

#### 4.215 LVV-T454 - LDM-503-8 Enable LSP viewing of spectrograph data.

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Michelle Gower |

Open LVV-T454 in Jira

#### 4.215.1 Verification Elements

- LVV-140 - DMS-REQ-0309-V-01: Raw Data Archiving Reliability

#### 4.215.2 Test Items

- Acquire spectrograph image data, transfer that data to NCSA, ingest data into a Butler (G2 or G3 when available), and enable viewing of data on LSP.

#### 4.215.3 Predecessors

LDM-503-4b

#### 4.215.4 Environment Needs

##### 4.215.4.1 Software

**4.215.4.2 Hardware** ATS storage server system housed with spectrograph. Receiver system at NCSA for data.

#### 4.215.5 Input Specification

Data must be well formed on Spectrograph data archiving system (ATS). Well-formed means “good image” and correct headers. (LSE-400)

#### 4.215.6 Output Specification

#### 4.215.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Have data on the ATS archiver system from the spectrograph.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Well formed files on the ATS system that need to be transferred to NCSA for further analysis  |
| 2    | Description                                 | A first few iterations is the human runs script to transfer data to NCSA through secure pipeline. after the process is unchanging/solid, a cronjob starts up data "sync" process. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Data is transferred to NCSA, and is located in NCSA file systems.   |
| 3    | Description                                 | All files transferred have a ButlerG2 (or G3 when ready) ingest process.  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | files now can be accessed by Butler access methods  |
| 4    | Description                                 | LSP processes can now view spectrograph generate files  |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | LSP jupyter notebooks can view spectrograph files.  |

## 4.216 LVV-T1085 - Short Queries Functional Test

| Version | Status   | Priority | Verification Type | Owner         |
|---------|----------|----------|-------------------|---------------|
| 1       | Approved | Normal   | Test              | Fritz Mueller |

## 4.219 LVV-T1088 - Concurrent Scans Scaling Test

| Version | Status   | Priority | Verification Type | Owner         |
|---------|----------|----------|-------------------|---------------|
| 1       | Approved | Normal   | Test              | Fritz Mueller |

Open LVV-T1088 in Jira

### 4.219.1 Verification Elements

- LVV-185 - DMS-REQ-0354-V-01: Result latency for high-volume complex queries
- LVV-188 - DMS-REQ-0357-V-01: Result latency for high-volume full-sky queries on the Object table
- LVV-3403 - DMS-REQ-0361-V-01: Simultaneous users for high-volume queries

### 4.219.2 Test Items

This test will show that average completion-time of full-scan queries of the Object catalog table grows sub-linearly with respect to the number of simultaneously active full-scan queries, within the limits of machine resource exhaustion.

### 4.219.3 Predecessors

### 4.219.4 Environment Needs

#### 4.219.4.1 Software

#### 4.219.4.2 Hardware

#### 4.219.5 Input Specification

1. A test catalog of appropriate size (see schedule detail in LDM-552, section 2.2.1), prepared and ingested into the Qserv instance under test as detailed in LVV-T1017.
2. The concurrency load execution script, runQueries.py, maintained in the LSST Qserv github repository here: <https://github.com/lsst/qserv/blob/master/admin/tools/docker/deployment/in>

#### 4.219.6 Output Specification

#### 4.219.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Repeat steps 2 through 5 below, where “pool of interest” is taken first to be “FTSObj” and subsequently “FTSSrc”:   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | At end of each pass, a graph indicating scan scaling rate and machine resource exhaustion cutoff.   |
| 2    | Description                                 | Inspect and modify the CONCURRENCY and TARGET_RATES dictionaries in the runQueries.py script. Set CONCURRENCY initially to 1 for the query pool of interest, and to 0 for all other query pools. Set TARGET_RATES for the query pool of interest to the yearly value per table in LDM-552, section 2.2.1. |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | runQueries.py script updated with appropriate values for test iteration   |
| 3    | Description                                 | Execute the runQueries.py script and let it run for at least one, but preferably several, query cycles.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Test script executes producing log file.  |
| 4    | Description                                 | Examine log file output and compile performance statistics to obtain a growth curve point for the pool of interest for the test report.   |
|      | Test Data                                   | No data.  |
|      | Expected Result                             | Logs indicate either successful test run, providing another growth point for curve, or errors indicating machine resource exhaustion cutoff has been reached.   |
| 5    | Description                                 | Adjust the CONCURRENCY value for the pool of interest and repeat from step 3 to establish the growth trend and machine resource exhaustion cutoff for the query pool of interest to an acceptable degree of accuracy.   |

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Average query execution time for full scan queries of each class should be demonstrated to grow sub-linearly in the number of concurrent queries to the limits of machine resource exhaustion. |

## 4.220 LVV-T1089 - Load Test

| Version | Status   | Priority | Verification Type | Owner         |
|---------|----------|----------|-------------------|---------------|
| 1       | Approved | Normal   | Test              | Fritz Mueller |

Open LVV-T1089 in Jira

### 4.220.1 Verification Elements

- LVV-9786 - DMS-REQ-0356-V-03: Min number of simultaneous low-volume query users
- LVV-9787 - DMS-REQ-0356-V-04: Max time to retrieve low-volume query results
- LVV-188 - DMS-REQ-0357-V-01: Result latency for high-volume full-sky queries on the Object table
- LVV-185 - DMS-REQ-0354-V-01: Result latency for high-volume complex queries
- LVV-3403 - DMS-REQ-0361-V-01: Simultaneous users for high-volume queries

### 4.220.2 Test Items

This test will check that Qserv is able to meet average query completion time targets per query class under a representative load of simultaneous high and low volume queries while running against an appropriately scaled test catalog.

### 4.220.3 Predecessors

#### 4.220.4 Environment Needs

##### 4.220.4.1 Software

##### 4.220.4.2 Hardware

#### 4.220.5 Input Specification

QSERV has been set-up following procedure at LVV-T1017

#### 4.220.6 Output Specification

#### 4.220.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Inspect and modify the CONCURRENCY and TARGET_RATES dictionaries in the run-Queries.py script. Set CONCURRENCY and TARGET_RATES for all pools to the yearly value per table in LDM-552, section 2.2.1. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Script updated with appropriate values.  |
| 2    | Description                                 | Execute the runQueries.py script and let it run for 24 hours.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Script runs without error and produces output log.   |
| 3    | Description                                 | Examine log file output and compile average query execution times per query type; and compare to yearly target values per table in LDM-552, section 2.2.1.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Average query times per query type equal or less than corresponding yearly target values in LDM-552, section 2.2.1.  |

#### 4.221 LVV-T1090 - Heavy Load Test

| Version | Status   | Priority | Verification Type | Owner         |

| 1       | Approved | Normal   | Test              | Fritz Mueller |

Open LVV-T1090 in Jira

#### 4.221.1 Verification Elements

- LVV-9786 - DMS-REQ-0356-V-03: Min number of simultaneous low-volume query users
- LVV-9787 - DMS-REQ-0356-V-04: Max time to retrieve low-volume query results
- LVV-188 - DMS-REQ-0357-V-01: Result latency for high-volume full-sky queries on the Object table
- LVV-185 - DMS-REQ-0354-V-01: Result latency for high-volume complex queries
- LVV-3403 - DMS-REQ-0361-V-01: Simultaneous users for high-volume queries

#### 4.221.2 Test Items

This test will check that Qserv is able to meet average query completion time targets per query class under a higher than average load of simultaneous high and low volume queries while running against an appropriately scaled test catalog.

#### 4.221.3 Predecessors

#### 4.221.4 Environment Needs

##### 4.221.4.1 Software

##### 4.221.4.2 Hardware

#### 4.221.5 Input Specification

QSERV has been set-up following procedure at LVV-T1017

#### 4.221.6 Output Specification

#### 4.221.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Inspect and modify the CONCURRENCY and TARGET_RATES dictionaries in the run-Queries.py script. Set CONCURRENCY and TARGET_RATES for LV query pool to 2020 value per table in LDM-552, section 2.2.1. Set CONCURRENCY and TARGET_RATES for all other query pools to values in next column over from current year column (or to 2020 values +10% if year is 2020) per table in LDM-552, section 2.2.1. |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Script updated with appropriate values.  |
| 2    | Description                                 | Execute the runQueries.py script and let it run for 24 hrs.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Script runs without error and produces output log.   |
| 3    | Description                                 | Examine log file output and compile average query execution times per query type.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | Average query times per query type equal or less than corresponding yearly target values in LDM-552, section 2.2.1.  |

#### 4.222 LVV-T1097 - Verify Summit Facility Network Implementation

| Version | Status | Priority | Verification Type | Owner       |
|---------|--------|----------|-------------------|-------------|
| 1       | Draft  | Normal   | Test              | Jeff Kantor |

Open LVV-T1097 in Jira

#### 4.222.1 Verification Elements

- LVV-71 - DMS-REQ-0168-V-01: Summit Facility Data Communications

#### 4.222.2 Test Items

Verify that data acquired by a AuxTel DAQ can be transferred to Summit DWDM and loaded in the EFD without problems.

#### 4.222.3 Predecessors

PMCS DMTC-7400-2400 Complete

PMCS T&SC-2600-1545 Complete

#### 4.222.4 Environment Needs

**4.222.4.1 Software** See pre-conditions

**4.222.4.2 Hardware** See pre-conditions.

#### 4.222.5 Input Specification

1. Summit Control Network and Camera Data Backbone installed and operating properly.
2. Summit - Base Network installed and operating properly.
3. EITHER: AuxTel hardware and control systems are functional with LATISS. AuxTel TCS, AuxTel EFD, AuxTel CCS, AuxTel DAQ are connected via Control Network on Summit to Rubin Observatory DWDM (with at least 2 x 10 Gbps ethernet port client cards) OR: high-quality DAQ application-level simulators that match the form, volume, file paths, compressibility, and cadence of the expected instrument data, running on end node computers that are the production hardware or equivalent to it. Scientific validity of the data content is not essential.
4. AuxTel Archiver/forwarders installed in Summit and operating properly running on end node computers that are the production hardware or equivalent to it.
5. As-built documentation for all of the above is available.

NOTE: This test will be repeated at increasing data volumes as additional observatory capabilities (e.g. ComCAM, FullCam) become available. Final verification will be tested at full operational volume. After the initial test, the corresponding verification elements will be flagged as “Requires Monitoring” such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

#### 4.222.6 Output Specification

#### 4.222.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Verify the pre-conditions have been satisfied  |
|      | Test Data                                   | NA   |
|      | Expected Result                             | Pre-conditions are satisfied.  |
| 2    | Description                                 | Control the AuxTel through a night of Observing. While observing, read out LATISS data and transfer to Rubin Observatory Summit DWDM while monitoring latency. |
|      | Test Data                                   | LATISS images and metadata   |
|      | Expected Result                             | Data is fed to DWDM without delays or errors.  |
| 3    | Description                                 | Verify that data acquired by a AuxTel DAQ can be transferred and loaded in EFD without problems.   |
|      | Test Data                                   | LATISS images and metadata   |
|      | Expected Result                             | Examine the EFD to ensure that the data has been loaded properly.  |

#### 4.223 LVV-T1168 - Verify Summit - Base Network Integration

| Version | Status   | Priority | Verification Type | Owner       |
|---------|----------|----------|-------------------|-------------|
| 1       | Approved | Normal   | Inspection        | Jeff Kantor |

Open LVV-T1168 in Jira

#### 4.223.1 Verification Elements

- LVV-73 - DMS-REQ-0171-V-01: Summit to Base Network

#### 4.223.2 Test Items

Verify the integration of the summit to base network by demonstrating a sustained and uninterrupted transfer of data between summit and base over 1 day period at or exceeding rates specified in LDM-142. Done in 3 phases in collaboration with equipment/installation vendors (see test procedure).

#### 4.223.3 Predecessors

See pre-conditions by phase above.

#### 4.223.4 Environment Needs

**4.223.4.1 Software** perfsonar on DTN.

**4.223.4.2 Hardware** OTDR, DTN.

#### 4.223.5 Input Specification

PMCS DMTC-7400-2330 COMPLETE

By phase:

1. Posts from Cerro Pachon to AURA Gatehouse repaired/improved. Fiber installed on posts from Cerro Pachon to AURA Gatehouse. Fiber installed from AURA Gatehouse to AURA compound in La Serena. OTDR purchased.
2. AURA DWDM installed in caseta on Cerro Pachon and in existing computer room in La Serena. DTN installed in La Serena. DTN loaded with software and test data staged.
3. Base Data Center (BDC) ready for installation of LSST DWDM. Fiber connecting existing computer room to BDC. LSST DWDM equipment installed in Summit Computer Room

and BDC.

#### 4.223.6 Output Specification

Fiber tested to within acceptable Db. Bandwidth, latency within specifications.

#### 4.223.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Test optical fiber with OTDR:<br>Installation of fiber optic cables and Optical Time Domain Reflector (OTDR) fiber testing (completed 20170602 REUNA deliverable RD10) |
|      | Test Data                                   | OTDR generated optical data  |
|      | Expected Result                             | Fiber tested to within acceptable Db.  |
| 2    | Description                                 | Test AURA DWDM:<br>Installation of AURA DWDM and Data Transfer Node (DTN) (completed 20171218 DMTR-82)   |
|      | Test Data                                   | DTN perfSonar generated data   |
|      | Expected Result                             | Summit - Base bandwidth and latency within specifications  |
| 3    | Description                                 | Test LSST DWDM:<br>Installation of LSST DWDM and Bit Error Rate Tester (BERT) data (completed 20190505 collection-7743, 20191108 DAQ DWDM Connection Tests)            |
|      | Test Data                                   | BERT generated data  |
|      | Expected Result                             | Summit - Base bandwidth, latency, bit error rate within specifications   |

#### 4.224 LVV-T1232 - Verify Implementation of Catalog Export Formats From the Portal Aspect

| Version | Status  | Priority | Verification Type | Owner        |

#### 4.225 LVV-T1240 - Verify implementation of minimum astrometric standards per CCD

| Version | Status   | Priority | Verification Type | Owner     |
|---------|----------|----------|-------------------|-----------|
| 1       | Approved | Normal   | Test              | Jim Bosch |

Open LVV-T1240 in Jira

##### 4.225.1 Verification Elements

- LVV-9741 - DMS-REQ-0030-V-02: Minimum astrometric standards per CCD

##### 4.225.2 Test Items

Verify that each CCD in a processed dataset had its astrometric solution determined by at least **astrometricMinStandards = 5** astrometric standards.

##### 4.225.3 Predecessors

##### 4.225.4 Environment Needs

###### 4.225.4.1 Software

###### 4.225.4.2 Hardware

##### 4.225.5 Input Specification

#### 4.225.6 Output Specification

#### 4.225.7 Test Procedure

| Step              | Description, Input Data and Expected Result |   |
|-------------------|---|---|
| 1                 | Description                                 | Identify an appropriate processed dataset for this test.  |
|                   | Test Data                                   | No data.  |
|                   | Expected Result                             | A dataset with Processed Visit Images.  |
| 2-1 from LVV-T987 | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following:  |
|                   | Test Data                                   |   |
|                   | Expected Result                             | Butler repo available for reading.  |
| 3                 | Description                                 | Select a single visit from the dataset, and extract its calibration data. For a subset of CCDs, check how many astrometric standards contributed to the solution. Confirm that this number is at least <b>astrometricMinStandards = 5</b> . |
|                   | Test Data                                   | No data.  |
|                   | Expected Result                             | At least <b>astrometricMinStandards</b> from each CCD were used in determining the WCS solution.  |

#### 4.226 LVV-T1250 - Verify implementation of minimum number of simultaneous DM EFD query users

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T1250 in Jira

##### 4.226.1 Verification Elements

- LVV-3400 - DMS-REQ-0358-V-01: Min number of simultaneous DM EFD query users

#### 4.226.2 Test Items

Verify that the DM EFD can support **dmEfdQueryUsers = 5** simultaneous queries. The additional requirement that each query must last no more than **dmEfdQueryTime = 10 seconds** will be verified separately in LVV-T1251, but these must be satisfied together.

#### 4.226.3 Predecessors

#### 4.226.4 Environment Needs

##### 4.226.4.1 Software

##### 4.226.4.2 Hardware

#### 4.226.5 Input Specification

#### 4.226.6 Output Specification

#### 4.226.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Send multiple (at least 5) simultaneous queries to the DM EFD.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 2    | Description                                 | Confirm that (a) the queries executed successfully, and that (b) they return reasonable results.   |
|      | Test Data                                   | No data.   |
|      | Expected Result                             |  |
| 3    | Description                                 | Repeat the above steps for different queries, and different numbers of simultaneous queries, to confirm that the expected performance is met regardless of the query being executed. |
|      | Test Data                                   | No data.   |

| Step | Description, Input Data and Expected Result |
|------|---|
|      | Expected Result                             |

#### 4.227 LVV-T1251 - Verify implementation of maximum time to retrieve DM EFD query results

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

### 4.234 LVV-T1525 - Verify Implementation of Linkage Between HiPS Maps and Coadded Images

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Demonstration     | Jeffrey Carlin |

Open LVV-T1525 in Jira

#### 4.234.1 Verification Elements

- LVV-18223 - DMS-REQ-0381-V-01: HiPS Linkage to Coadds\_1

#### 4.234.2 Test Items

Verify that the HiPS maps produced by the Data Management system provide for straightforward linkage from the HiPS data to the underlying LSST coadded images, and that this has been implemented using a mechanism supported by both the LSST Science Platform and by community tools.

#### 4.234.3 Predecessors

- LVV-146 - DMS-REQ-0315-V-01: DMS Communication with OCS

#### 4.240.2 Test Items

Verify that Comcam has all the services running and verified working for retrieving an image from the comcam DAQ and store it on file systems at the LDF for viewing by LSP.

#### 4.240.3 Predecessors

#### 4.240.4 Environment Needs

##### 4.240.4.1 Software

##### 4.240.4.2 Hardware

#### 4.240.5 Input Specification

Comcam must be at the summit and producing images with proper headers.

#### 4.240.6 Output Specification

#### 4.240.7 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | CC-DAQ produces an image   |
|      | Test Data                                   | DAQ produces a SAL message that a image has been created   |
|      | Expected Result                             | in memory file created in DAQ  |
| 2    | Description                                 | Archiver and Forwarder build image with proper header from header service  |
|      | Test Data                                   | Good image file with proper header with all 9 CCDs   |
|      | Expected Result                             | 9 image files all with individual headers and then 1 header for all 9 images too.  |
| 3    | Description                                 | AT-archiver/forwarder transfers the file to the l1-handoff machine.  |
|      | Test Data                                   | l1-handoff machine has image file now on local disk.   |
|      | Expected Result                             | image file now found on disk on L1-handoff with hardlinks to 2 different file systems (OODS and DBB) services.   |
| 4    | Description                                 | OIDS service running on L1-handoff machine ingests the image file into Butler/G3 and readies the file systems for the commissioning cluster at the Base to be able to mount and see the new files. |
|      | Test Data                                   | Image file ingested to local butler for Base   |
|      | Expected Result                             | Image file ingested  |
| 5    | Description                                 | DBB transfers the file to NCSA thorough the DBB-gateway machines and DTN nodes at the base.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | data file arrives at file systems at NCSA  |
| 6    | Description                                 | Files are ingested into the butler/G3 at NCSA and moved to file systems that are viewable by the LSP.  |
|      | Test Data                                   | No data.   |
|      | Expected Result                             | data can be seen and retrieved by LSP.   |

| Step | Description, Input Data and Expected Result |
|------|---|
|------|---|

#### 4.248.1 Verification Elements

- LVV-73 - DMS-REQ-0171-V-01: Summit to Base Network

#### 4.248.2 Test Items

Verify ISO Layer 3 full (22 x 10 Gbps ethernet ports on DAQ side with test data from DAQ test stand, AURA, Camera DAQ team do test). Demonstrate transfer of data at or exceeding rates specified in LDM-142.

#### 4.248.3 Predecessors

See pre-conditions.

#### 4.248.4 Environment Needs

##### 4.248.4.1 Software

See pre-conditions.

#### 4.248.4.2 Hardware See pre-conditions.

#### 4.248.5 Input Specification

1. PMCS DMTC-7400-2400 COMPLETE
2. LVV-T1168 Passed
3. EITHER: Full Camera DAQ installed on summit and loaded with data OR: high-quality DAQ application-level simulators that match the form, volume, file paths, compressibility, and cadence of the expected instrument data, running on end node computers that are the production hardware or equivalent to it. Scientific validity of the data content is not essential.
4. Archiver/forwarders installed at Base running on end node computers that are the production hardware or equivalent to it.
5. As-built documentation for all of the above is available.

NOTE: This test will be repeated at increasing data volumes as additional observatory capabilities (e.g. ComCAM, FullCam) become available. Final verification will be tested at full operational volume. After the initial test, the corresponding verification elements will be flagged as "Requires Monitoring" such that those requirements will be closed out as having been verified but will continue to be monitored throughout commissioning to ensure they do not drop out of compliance.

#### 4.248.6 Output Specification

#### 4.248.7 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Verify Pre-conditions are satisfied.  |
|      | Test Data                                   | NA  |
|      | Expected Result                             | Pre-conditions are satisfied.   |
| 2    | Description                                 | Transfer data between summit and base over uninterrupted 1 day period. Monitor transfer of data at or exceeding rates specified in LDM-142. |
|      | Test Data                                   | DAQ pre-loaded data   |

| Step            | Description, Input Data and Expected Result                |  |
|-----------------|--|--|
| Expected Result | Data transfers at or exceeding rates specified in LDM-142. |  |

#### 4.253 LVV-T1749 - Verify calculation of fraction of relative astrometric measurement error on 20 arcminute scales exceeding outlier limit

| Version | Status   | Priority | Verification Type | Owner          |
|---------|----------|----------|-------------------|----------------|
| 1       | Approved | Normal   | Test              | Jeffrey Carlin |

Open LVV-T1749 in Jira

## 4.253.1 Verification Elements

- LVV-9776 - DMS-REQ-0360-V-10: Max fraction exceeding limit on 20 arcmin scales
- LVV-9770 - DMS-REQ-0360-V-05: Outlier limit on 20 arcmin scales

## 4.253.2 Test Items

Verify that the DM system has provided the code to calculate the maximum fraction of relative astrometric measurements on 20 arcminute scales that exceed the 20 arcminute outlier limit **AD2 = 20 milliarcseconds**, and assess whether it meets the requirement that it shall be less than **AF2 = 10 percent**.

#### 4.278.1 Verification Elements

- LVV-18881 - DMS-REQ-0282-V-02: Dark Current Correction Frame Effectiveness

#### 4.278.2 Test Items

Verify that the DMS can determine the effectiveness of a dark correction and determine how often it should be updated.

#### 4.278.3 Predecessors

Execution of LVV-T90.

#### 4.278.4 Environment Needs

##### 4.278.4.1 Software

##### 4.278.4.2 Hardware

#### 4.278.5 Input Specification

#### 4.278.6 Output Specification

#### 4.278.7 Test Procedure

| Step               | Description, Input Data and Expected Result |   |
|--------------------|---|---|
| 1                  | Description                                 | Identify the path to a dataset containing dark frames (i.e., exposures taken with the shutter closed).  |
|                    | Test Data                                   | No data.  |
|                    | Expected Result                             |   |
| 2-1 from LVV-T1060 | Description                                 | Execute the Calibration Products Production payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone.  |
|                    | Test Data                                   |   |
|                    | Expected Result                             |   |
| 2-2 from LVV-T1060 | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.   |
|                    | Test Data                                   |   |
|                    | Expected Result                             |   |
| 3                  | Description                                 | Determining whether the dark correction is being done properly will require on-sky science data. The dark correction can be applied to these frames and the results inspected to ensure that the correction was correctly measured and applied. |
|                    | Test Data                                   | No data.  |
|                    | Expected Result                             | Applying the dark correction to a dataset produces noticeable differences between the original frame(s) and the corrected outputs.  |

#### 4.279 LVV-T1863 - Verify ability to process Special Programs data alongside normal processing

| Version | Status | Priority | Verification Type | Owner          |

#### 4.283.7 Test Procedure

| Step | Description, Input Data and Expected Result |          |
|------|---|----------|
| 1    | Description                                 |          |
|      | Test Data                                   | No data. |
|      | Expected                                    |          |
|      | Result                                      |          |

## 5 Reusable Test Cases

Test cases in this section are made up of commonly encountered steps that have been factored out into modular, reusable scripts. These test cases are meant solely for the building of actual tests used for verification, to be inserted in test scripts via the “Call to Test” functionality in Jira/ATM. They streamline the process of writing test scripts by providing pre-designed steps, while also ensuring homogeneity throughout the test suite. These reusable modules are not themselves verifying requirements. Also, these test cases shall not call other reusable test cases in their script.

### 5.1 LVV-T216 - Installation of the Alert Distribution payloads.

| Version | Status   | Priority | Verification Type | Owner      |
|---------|----------|----------|-------------------|------------|
| 1       | Approved | Normal   | Test              | Eric Bellm |

Open LVV-T216 in Jira

#### 5.1.1 Test Items

This test will check:

- That the Alert Distribution payloads are available from documented channels.
- That the Alert Distribution payloads can be installed on LSST Data Facility-managed systems.
- That the Alert Distribution payloads can be executed by LSST Data Facility-managed systems.

#### 5.1.2 Environment Needs

**5.1.2.1 Hardware** This test case shall be executed on the Kubernetes Commons at the LDF. As discussed in <https://dmtn-028.lsst.io/> and <https://dmtn-081.lsst.io/>, the test machine should have at least 16 cores, 64 GB of memory and access to at least 1.5 TB of shared storage.

### 5.1.3 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Download Kafka Docker image from <a href="https://github.com/lsst-dm/alert_stream">https://github.com/lsst-dm/alert_stream</a> .  |
|      | Test Data                                   |   |
|      | Expected Result                             | Runs without error  |
|      |   |   |
| 2    | Description                                 | Change to the alert_stream directory and build the docker image.  |
|      |   | <code>docker build -t "lsst-kub001:5000/alert_stream"</code>  |
|      | Test Data                                   |   |
|      | Expected Result                             | Runs without error  |
| 3    | Description                                 | Register it with Kubernetes   |
|      |   | <code>docker push lsst-kub001:5000/alert_stream</code>  |
|      | Test Data                                   |   |
|      | Expected Result                             | Runs without error  |
| 4    | Description                                 | From the alert_stream/kubernetes directory, start Kafka and Zookeeper:  |
|      |   | <pre>kubectl create -f zookeeper-service.yaml kubectl create -f zookeeper-deployment.yaml kubectl create -f kafka-deployment.yaml kubectl create -f kafka-service.yaml</pre> <p>(use kubectl get pods/services between each command to check status; wait until each is "Running" before starting the next command)</p> |
|      | Test Data                                   |   |
|      |   |   |

| Step  | Description, Input Data and Expected Result |  |
|-------|---|--|
|       | Expected Result                             | Runs without error   |
| <hr/> |   |  |
| 5     | Description                                 | Confirm Kafka and Zookeeper are listed when running  |
|       |   | kubect! get pods   |
|       |   | and  |
|       |   | kubect! get services   |
|       | Test Data                                   |  |
|       | Expected Result                             | Output should be similar to:   |
|       |   | <pre>kubect! get pods NAME                READY   STATUS    RESTARTS   AGE kafka-768ddf5564-xwgvh  1/1     Running   0          31s zookeeper-f798cc548-mgkpn 1/1     Running   0          1m  kubect! get services NAME    TYPE      CLUSTER-IP   EXTERNAL-IP  PORT(S)    AGE kafka   ClusterIP 10.105.19.124 &lt;none&gt;       9092/TCP    6s zookeeper ClusterIP 10.97.110.124 &lt;none&gt;       32181/TCP   2m</pre> |

## 5.2 LVV-T837 - Authenticate to Notebook Aspect

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T837 in Jira

### 5.2.1 Test Items

Not specifically a test – modular script to be used in multiple other Test Scripts.

## 5.2.2 Input Specification

Must have a user account on the LSP.

## 5.2.3 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Authenticate to the notebook aspect of the LSST Science Platform (NB-LSP). This is currently at <a href="https://lsst-lsp-stable.ncsa.illinois.edu/nb">https://lsst-lsp-stable.ncsa.illinois.edu/nb</a> . |
|      | Test Data                                   |   |
|      | Expected Result                             | Redirection to the spawner page of the NB-LSP allowing selection of the containerized stack version and machine flavor.   |
| 2    | Description                                 | Spawn a container by:<br>1) choosing an appropriate stack version: e.g. the latest weekly.<br>2) choosing an appropriate machine flavor: e.g. medium<br>3) click "Spawn"                                  |
|      | Test Data                                   |   |
|      | Expected Result                             | Redirection to the JupyterLab environment served from the chosen container containing the correct stack version.  |

## 5.3 LVV-T838 - Access an empty notebook in the Notebook Aspect

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Simon Krughoff |

Open LVV-T838 in Jira

### 5.3.1 Test Items

The steps here cover just those necessary to gain access to an empty notebook after authentication is complete.

### 5.3.2 Input Specification

Authentication to the Notebook aspect.

### 5.3.3 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Open a new launcher by navigating in the top menu bar "File" -> "New Launcher"                             |
|      | Test Data                                   |  |
|      | Expected Result                             | A launcher window with several sections, potentially with several kernel versions for each.                |
|      |   |  |
| 2    | Description                                 | Select the option under "Notebook" labeled "LSST" by clicking on the icon.                                 |
|      | Test Data                                   |  |
|      | Expected Result                             | An empty notebook with a single empty cell. The kernel show up as "LSST" in the top right of the notebook. |
|      |   |  |

## 5.4 LVV-T849 - Authenticate to the portal aspect of the LSP

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 2       | Draft  | Normal   | Test              | Simon Krughoff |

Open LVV-T849 in Jira

### 5.4.1 Test Items

Obtain an authenticated session in the portal aspect of the LSST Science Platform

### 5.4.2 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Navigate to the Portal Aspect endpoint. The stable version should be used for this test and is currently located at: <a href="https://lsst-lsp-stable.ncsa.illinois.edu/portal/app/">https://lsst-lsp-stable.ncsa.illinois.edu/portal/app/</a> . |
|      | Test Data                                   |  |
|      | Expected Result                             | A credential-entry screen should be displayed.   |
|      |   |  |
| 2    | Description                                 | Enter a valid set of credentials for an LSST user with LSP access on the instance under test.  |
|      | Test Data                                   |  |
|      | Expected Result                             | The Portal Aspect UI should be displayed following authentication.   |
|      |   |  |

## 5.5 LVV-T850 - Log out of the portal aspect of the LSP

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Simon Krughoff |

Open LVV-T850 in Jira

### 5.5.1 Test Items

Leave the portal aspect of the LSST Science Platform in a clean state

### 5.5.2 Test Procedure

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 1    | Description                                 | Currently, there is no logout mechanism on the portal. This should be updated as the system matures.    |
|      | Test Data                                   | Simply close the browser window.  |
|      | Expected Result                             | Closed browser window. When navigating to the portal endpoint, expect to execute the steps in LVV-T849. |
|      |   |   |

| Step | Description, Input Data and Expected Result |
|------|---|
|      |   |

## 5.6 LVV-T860 - Initialize science pipelines

| Version               | Status | Priority | Verification Type | Owner          |
|-----------------------|--------|----------|-------------------|----------------|
| 1                     | Draft  | Normal   | Test              | Jeffrey Carlin |
| Open LVV-T860 in Jira |        |          |                   |                |

### 5.6.1 Test Items

Initialize the science pipelines software for use.

### 5.6.2 Input Specification

An installed software stack, either locally, on 'lsst-dev', or through the Notebook aspect.

### 5.6.3 Test Procedure

| Step | Description, Input Data and Expected Result |
|------|---|
|      |   |

|  |  |
|--|--|
|  | <div> <div>Description</div> <div>The 'path' that you will use depends on where you are running the science pipelines. Options:</div> </div> |
|--|--|

|   |  |
|---|--|
| 1 |  |
|---|--|

- local (newinstall.sh - based install):[path\_to\_installation]/loadLSST.bash
- development cluster ("lsst-dev"): /software/lsstsw/stack/loadLSST.bash
- LSP Notebook aspect (from a terminal): /opt/lsst/software/stack/loadLSST.bash

From the command line, execute the commands below in the example code:

|              |   |
|--------------|---|
| Test Data    |   |
| Example Code | <pre>source 'path' setup lsst_distrib</pre> |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
|      | Expected Result                             | Science pipeline software is available for use. If additional packages are needed (for example, 'obs' packages such as 'obs_subaru'), then additional 'setup' commands will be necessary. |
|      |   | To check versions in use, type:<br>eups list -s   |

## 5.7 LVV-T866 - Run Alert Production Payload

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T866 in Jira

### 5.7.1 Test Items

Execute Alert Production payload on a dataset. Generate all (or a subset of) Prompt science data products including Alerts (with the exception of Solar System object orbits) and load them into the Data Backbone and Prompt Products Database.

### 5.7.2 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Perform the steps of Alert Production (including, but not necessarily limited to, single frame processing, ISR, source detection/measurement, PSF estimation, photometric and astrometric calibration, difference imaging, DIASource detection/measurement, source association). During Operations, it is presumed that these are automated for a given dataset. |
|      | Test Data                                   |  |
|      | Expected Result                             | An output dataset including difference images and DIASource and DIAObject measurements.  |
| 2    | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest.  |
|      | Test Data                                   |  |

| Step  | Description, Input Data and Expected Result |
|-------|---|
|       | Expected Result                             |
| <hr/> |   |

## 5.8 LVV-T901 - Run MOPS payload

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T901 in Jira

### 5.8.1 Test Items

Run MOPS payload on a dataset (for example, one night's data). Generate entries in the MOPS Database and the Prompt Products Database, including Solar System Object records, measurements, and orbits. Perform precovery forced photometry of transients.

### 5.8.2 Predecessors

Uses results loaded into Prompt Products database and Data Backbone services in LVV-T866.

### 5.8.3 Test Procedure

| Step | Description, Input Data and Expected Result  |
|------|--|
| 1    | <p><b>Description</b> Perform the steps of Moving Object Pipeline (MOPS) processing on newly detected DIASources, and generate Solar System data products including Solar System objects with associated Keplerian orbits, errors, and detected DIASources. This includes running processes to link DIASource detections within a night (called tracklets), to link these tracklets across multiple nights (into tracks), to fit the tracks with an orbital model to identify those tracks that are consistent with an asteroid orbit, to match these new orbits with existing SSObjects, and to update the SSObject table.</p> <hr/> <p><b>Test Data</b></p> <hr/> <p><b>Expected Result</b> An output dataset consisting of an updated SSObject database with SSObjects both added and pruned as the orbital fits have been refined, and an updated DIASource database with DIASources assigned and unassigned to SSObjects.</p> <hr/> |

| Step | Description, Input Data and Expected Result |   |
|------|---|---|
| 2    | Description                                 | Verify that the expected data products have been produced, and that catalogs contain reasonable values for measured quantities of interest. |
|      | Test Data                                   |   |
|      | Expected                                    |   |
|      | Result                                      |   |

## 5.9 LVV-T987 - Instantiate the Butler for reading data

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T987 in Jira

### 5.9.1 Test Items

Create a Butler client to read data from an input repository.

### 5.9.2 Input Specification

LVV-T860 must be executed to initialize the science pipelines.

### 5.9.3 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Identify the path to the data repository, which we will refer to as 'DATA/path', then execute the following: |
|      | Test Data                                   |  |
|      | Example Code                                | <pre>import lsst.daf.persistence as dafPersist butler = dafPersist.Butler(inputs='DATA/path')</pre>          |
|      | Expected Result                             | Butler repo available for reading.   |

## 5.10 LVV-T1059 - Run Daily Calibration Products Update Payload

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T1059 in Jira

### 5.10.1 Test Items

Execute the Daily Calibration Products Update payload to create a subset of Master Calibration images and Calibration Database entries.

### 5.10.2 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Execute the Daily Calibration Products Update payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone. |
|      | Test Data                                   |  |
|      | Expected Result                             |  |
|      |   |  |
| 2    | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.  |
|      | Test Data                                   |  |
|      | Expected Result                             |  |
|      |   |  |

## 5.11 LVV-T1060 - Run Periodic Calibration Products Production Payload

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T1060 in Jira

### 5.11.1 Test Items

Execute the Calibration Products Production payload to create a subset of Master Calibration images and Calibration Database entries.

### 5.11.2 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Execute the Calibration Products Production payload. The payload uses raw calibration images and information from the Transformed EFD to generate a subset of Master Calibration Images and Calibration Database entries in the Data Backbone. |
|      | Test Data                                   |  |
|      | Expected                                    |  |
|      | Result                                      |  |
| 2    | Description                                 | Confirm that the expected Master Calibration images and Calibration Database entries are present and well-formed.  |
|      | Test Data                                   |  |
|      | Expected                                    |  |
|      | Result                                      |  |

## 5.12 LVV-T1064 - Run Data Release Production Payload

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T1064 in Jira

### 5.12.1 Test Items

Execute the Data Release Production payload, starting from raw images and producing science data products.

### 5.12.2 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Process data with the Data Release Production payload, starting from raw science images and generating science data products, placing them in the Data Backbone. |
|      | Test Data                                   |  |
|      | Expected Result                             |  |
|      |   |  |

### 5.13 LVV-T1207 - Execute a simple ADQL query using the TAP service in the notebook aspect

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Jeffrey Carlin |

Open LVV-T1207 in Jira

#### 5.13.1 Test Items

Extract a small amount of data from a catalog via the LSST TAP service.

#### 5.13.2 Input Specification

One must have access to the LSST Notebook Aspect, and have logged in and opened an empty notebook.

#### 5.13.3 Test Procedure

| Step | Description, Input Data and Expected Result |  |
|------|---|--|
| 1    | Description                                 | Execute a query in a notebook to select a small number of stars. In the example code below, we query the WISE catalog, then extract the results to an Astropy table. |
|      | Test Data                                   |  |

| Step            | Description, Input Data and Expected Result  |
|-----------------|--|
| Example Code    | <pre>import pandas import pyvo service = pyvo.dal.TAPService('http://lsst-lsp-stable.ncsa.illinois.edu/api/tap')  results = service.search("SELECT ra, decl, w1mpro_ep, w2mpro_ep, w3mpro_ep FROM wise_00.allwise_p3as_mep WHERE CONTAINS(POINT('ICRS', ra, decl), CIRCLE('ICRS', 192.85, 27.13, .2)) = 1") tab = results.to_table()</pre> |
| Expected Result |  |

## 5.14 LVV-T1208 - Log out of the notebook aspect of the LSP

| Version | Status | Priority | Verification Type | Owner          |
|---------|--------|----------|-------------------|----------------|
| 1       | Draft  | Normal   | Test              | Simon Krughoff |

Open LVV-T1208 in Jira

### 5.14.1 Test Items

Leave the notebook aspect of the LSST Science Platform in a clean state

### 5.14.2 Test Procedure

| Step | Description, Input Data and Expected Result  |
|------|--|
| 1    | <p><b>Description</b> Under the 'File' menu at the top of your Jupyter notebook session, select one of the following:</p> <ul style="list-style-type: none"> <li>• Save All, Exit, and Log Out</li> <li>• Exit and Log Out Without Saving</li> </ul> <p><b>Test Data</b></p> <p><b>Expected Result</b> You will be returned to the LSP landing page: <a href="https://lsst-lsp-stable.ncsa.illinois.edu/">https://lsst-lsp-stable.ncsa.illinois.edu/</a> It is now safe to close the browser window.</p> |

| Step | Description, Input Data and Expected Result |
|------|---|
|      |   |

## 5.15 LVV-T1744 - Run validate\_drp on precursor data

| Version | Status  | Priority | Verification Type | Owner          |
|---------|---------|----------|-------------------|----------------|
| 1       | Defined | Normal   | Analysis          | Jeffrey Carlin |

Open LVV-T1744 in Jira

### 5.15.1 Test Items

Run the validate\_drp code on a precursor dataset to evaluate the metrics that have been implemented in validate\_drp.

### 5.15.2 Test Procedure

| Step | Description, Input Data and Expected Result   |
|------|---|
| 1    | <div> <div>Description</div> <div>Execute 'validate_drp' on a repository containing precursor data. Identify the path to the data, which we will call 'DATA/path', then execute the following (with additional flags specified as needed):</div> </div> |
|      | <div> <div>Test Data</div> <div></div> </div>   |
|      | <div> <div>Example Code</div> <div>validateDrp.py 'DATA/path'</div> </div>  |
|      | <div> <div>Expected Result</div> <div>JSON files (and associated figures) containing the Measurements and any associated "extras."</div> </div>   |

## 6 Deprecated Test Cases

This section includes all test cases that have been marked as deprecated. These test cases will never be executed again, but have been in the past. For this reason it is important to keep them in the baseline as a reference.

*No deprecated test cases found.*

Draft
